**@@@**

In the reference 1<sup>st</sup> cited, Government has constituted a Committee under the Chairmanship of Principal Secretary, EFS&T Dept. on the basis of certain incidents reported in violation of Forest (conservation), Act, 1980 in implementation of Palamuru Rangareddy Lift Irrigation Scheme to conduct detailed enquiry with the concerned officials of the Forest, Revenue and Irrigation Depts. to study the relevant documents/reports and to submit its report in the matter .

2. In the reference 2<sup>nd</sup> cited, the Prl. Secretary to Govt., E.F.S&T Dept., & Chairman of the Committee has submitted its report to Govt.

3. In the reference 3<sup>rd</sup> cited, a copy of the Committee report was communicated to the EFS&T Dept. for information and further action in the matter and also a copy of the report was communicated to the Engineer-in-Chief (Irrigation), Hyderabad and directed to obtain the explanation from the concerned Executive Engineer, PRLIS who has been named in the said report.

4. In the reference 4<sup>th</sup> cited, the Engineer-in-chief (Irrigation), Hyderabad, after examination of the explanation of Sri K. Vijayakumar, Executive Engineer, PRLIS Division No.1, Kollapur, who has been named in the inquiry report among the other things has stated that there was ambiguity in the status of the Lands and the Executive Engineer has confirmed it in his explanation and the explanation of the Executive Engineer may be considered and he may be warned to be very care full in such matters in future while taking up any work in Lands which are in proximity of forest Areas.

//2//

5. In the reference 5<sup>th</sup> cited, while communicating a copy of the reference 4<sup>th</sup> cited, the EFS&T Dept. was requested to offer their remarks on the explanation submitted by the Executive Engineer for taking further action in the matter.
6. In the reference 6<sup>th</sup> cited, the Environment, Forest, Science & Technology (For.I) Dept. has informed that the Irrigation Dept. alone is competent for finalization and taking disciplinary action as per the procedures laid down in the CCA rules 1991 as the Executive Engineer belongs to the Irrigation Dept..
7. In the reference 7<sup>th</sup> cited, while communicating the copies of the references cited, the Dist. Collector, Mahabubnagar was requested to furnish his remarks to Govt., on the explanation submitted by the Executive Engineer, PRLIS for taking further action in the matter.
8. In the reference 8<sup>th</sup> cited, the Collector and District Magistrate, Nagarkurnool while submitting factual of the case has submitted that the Executive Engineer, PRLIS Div. 1 Kollapur, or the Irrigation Dept. cannot be held responsible for violation of forest Laws in executing the works in Comt.Nos. 443 and 444 of Kollapur RF of Yellur Village. Ostensibly the work was executed with the assumption that the land is Govt. (Revenue Poramboke), there appears to be no intention to violate any forest laws. Hence, taking a lenient view it may be considered to issue a warning to be more careful in future.
9. Government, after examination of the entire matter and taking into consideration of the remarks of the Collector and District Magistrate, Nagarkurnool decided to warn the Executive Engineer concerned.
10. Accordingly, Sri K. Vijayakumar, Executing Engineer, PRLIS Division No.1, Kollapur is hereby warned to be more careful in future in execution of Irrigation works relating to Forest Lands.
11. The Engineer-in-Chief (Irrigation), I&CAD Department, Hyderabad shall take necessary action, accordingly.

GOVERNEMENT OF TELANGANA  
COLLECTORATE :: NAGARKURNOOL

Lr. No.E2.3078/2015

Date: 09.01.2019

From

To

Sri. E. Sridhar IAS,  
Collector and District Magistrate,  
Nagarkurnool,  
Telangana.

The Principal Secretary,  
to Government of Telangana,  
Irrigation & CAD (P.C) Dept  
Telangana Secretariat,  
Hyderabad.

Sir,

- Sub: Govt. Lands – Nagarkurnoo Dist. – Kollapur (M) – Narlapur (V) – Govt. lands to an extent of Ac.146-22gts., & Ac.232-01 gts., of assigned lands, (total extent of Ac.378-23gts.,) identified which are under submergence in the PRLIS – Proposals received – Reg.
- Ref: 1. Government Memo 12281/P.C/A1/2017 dt 15.9.2018 and 13.12.2018  
2. Explanation of the Executive Engineer PRLIS Div 1, Kollapurdt NIL  
3. Collector Mahabubnagar Proceedings E2/1375/2016 dt 19.05.2016  
4. Collector Mahabubnagar Proceedings E2/3079/2015 dt 27.05.2016 & 26.10.15  
5. Collector Mahabubnagar Proceedings E2/3078/2015 dt 27.10.2015

\*\*\*

It is submitted that Government in the reference 1<sup>st</sup> cited requested Collector Mahabubnagar, to offer remarks on the explanation of Executive Engineer PRLIS Div 1 Kollapur. After reorganization of Districts, Kollapur falls in the jurisdiction of Nagarkurnool District. Therefore, remarks are being submitted by Collector Nagarkurnool.

It is submitted that, on the request made by Irrigation Department for allotment of Land for PRLIS project in Nagarkurnool District, orders were issued in reverences 3<sup>rd</sup> to 5<sup>th</sup> cited allocating and handing over an extent of Ac 832.08 to the Irrigation Department. These orders were issued based on revenue records. After, Irrigation Department started work in the land handed over, Forest Department issued notice to Irrigation Department for violating Forest Laws and executing works on Forest Lands. Then a joint inspection was conducted by Revenue, Irrigation and Forest Officials, during this process, it was noticed that in 1974 the said land was handed over to forest Department and 4(1) notification was issued on B9/6412/74, dated.26.06.1974 and B1s L.Dis. 04/2261/74 dated, 12.07.1974, However, the final notification under section 15 was not issued and in the Revenue Records it continued to be recorded as Poramboke/Sarkari. Based on Revenue Records land was handed over to Irrigation Department. Accordingly, work was executed by irrigation department.

Cont....(2)

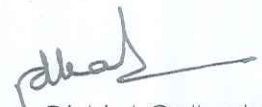

952000

//2//

In these circumstances, the Executive Engineer PRILS Div 1 Kollapur, or the Irrigation Department cannot be held responsible for violation of Forest Laws in executing the works in Compt.No.s 443 and 444 of Kollapur RF of Yellur Village, ostensibly, the work was executed with the assumption that the land is Government (revenue poramboke), there appears to be no intention to violate any forest laws. Hence, taking a lenient view it may be considered to issue a warning to be more careful in future.

Yours Faithfully,

District Collector,  
Nagarkurnool.

**Subject: Palamaru Rangareddy Lift Irrigation Scheme in Mahbubnagar, Rangareddy & Nalgonda Districts of Telangana by Irrigation and CAD Department, Government of Telangana - TOR - regd.**

Sir,

This has reference to your letter No. CE/PRLIS/DCE/O.T-1/T.S1/2215 dated 28.8.2017 on the above-mentioned subject.

2. The above proposal was appraised by the Expert Appraisal Committee (EAC) for River Valley & Hydroelectric Power Projects (RV & HEP) in its 8<sup>th</sup> meeting held on 22.9.2017. The comments and observations of EAC may be seen in the Minutes of the meeting that are available on the Ministry's website.

3. It was noted that the scheme in its first phase envisages lifting of 90 TMC of flood water in 60 days during the flood season from the fore shore of the Srisailem reservoir on Krishna river at Yellur (V), Kollapur (M) in Mahabubnagar (D) through 5 separate stages to provide drinking water facilities to enroute 1428 villages in 74 mandals of Mahabubnagar, Rangareddy and Nalgonda Districts, Hyderabad City and also envisages to provide water for industrial use in Mahabubnagar, Rangareddy and Nalgonda Districts. The Cultural Command Area (CCA) is 4,97,976 ha. The total land requirement for the project is 15,790 ha. There is no displacement as no habitation is coming under submergence.

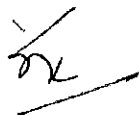

4. In 2<sup>nd</sup> phase, canal network will be developed from the reservoirs to create irrigation to up land areas of Mahabubnagar, Rangareddy and Nalgonda districts for an ayacut of 4.97,976 ha. Later on, this stored water shall be used for irrigation purposes in various districts through a network

of canals. In addition to the drinking water facility, it is proposed to irrigate in 4,97,976 ha of CCA in the districts of Mahabubnagar, Rangareddy and Nalgonda. A total of 15,790 ha land will be acquired for construction various canals network, reservoir, temporary labourers colonies, etc. No forestland is involved in the proposed project.

5. The proposed project is located at a distance of 11.95 km from the core of Amrabad Tiger Reserve, 2.56 km from the buffer and 1.56 from the proposed Eco-Sensitive Zone (ESZ) of Amrabad Tiger Reserve. The total cost of the project is about Rs. 35,200 Crores and likely to be completed in 30 months.

6. Based on recommendations of the EAC, the Ministry of Environment, Forest & Climate Change, hereby accords a fresh clearance for pre-construction activities at the proposed site as per the provisions of the Environmental Impact Assessment Notification, 2006 and subsequent amendment, 2009 along with the following Terms of Reference (ToR) for the preparation of EIA/ EMP report:

- a) The EIA/EMP report should contain the information in accordance with provisions & stipulations as given in the **Annexure-I**.
- b) The consultant engaged for preparation of EIA/EMP report has to be registered with Quality Council of India (QCI/ NABET under the scheme of Accreditation & Registration of MoEF. This is a pre-requisite.
- c) Consultant shall include a "Certificate" in EIA/EMP report regarding portion of EIA/EMP prepared by them and data provided by other organisation(s)/ laboratories including status of approval of such laboratories.
- d) The draft EIAA/EMP report prepared as per **Annexure-I** should be submitted to the State Pollution Control Board Committee concerned for conducting Public Consultation as per the provisions stipulated in EIA Notification of 2006. Public Hearing, which is a component of Public Consultation, shall be held district wise at the site or in its close proximity as prescribed in Appendix (IV) of EIA Notification, 2006. The draft EIA/EMP report is to be submitted to SPCB etc. sufficiently before the expiry of the ToR validity so that necessary amendments in EIA/EMP can be undertaken based on public hearing and the same is submitted to MoEF&CC before expiry of validity.
- e) The PP has disclosed during the TOR presentation that Monsoon season data has been collected in 2017 for this project and requested the EAC to accept the same for use in the EIA/EMP report. The committee accepts that the Monsoon data collected can be included in the EIA/EMP report.
- f) All issues discussed in the Public Hearing / Consultations should be addressed and incorporated in the EIA/EMP report. Final EIA/EMP report should be submitted to the Ministry for Environmental

(2)

Clearance only after incorporating these issues before the expiry of validity of ToR.

- g) The ToR will remain valid for a period of 4 years from the date of issue of this letter for submission of EIA/EMP report along with public consultation. The ToR will stand lapsed on completion of 4 years in case final EIA/EMP is not submitted and the validity is not extended.
- h) In case of any change in the scope of the project such as capacity enhancement, change in submergence, etc., fresh scoping clearance has to be obtained by the project proponent.
- i) The PP should submit a copy of TEC of the DPR along with EIA/EMP report.
- j) Information pertaining to Corporate Environmental Responsibility and Environmental Policy shall be provided in the EIA/EMP Report as per this Ministry's OM No. J-11013/25/2014-IA-I dated 11.08.2014 (Reference as **Annexure-II**)
- k) The EIA/ EMP report must contain an Index showing details of compliance of all TOR conditions. the Index will comprise of page no. etc., vide which compliance of a specific ToR is available. It may be noted that without this index, EIA/ EMP report will not be accepted.
- l) In case the validity is to be extended, necessary application is to be submitted to Regulatory Authority before expiry of validity period together with an updated Form-I based on proper justification.

This has approval of the Competent Authority.

Yours faithfully,

  
(Dr. S. Kerketta)

Director

Director

**TERMS OF REFERENCE FOR CONDUCTING ENVIRONMENT IMPACT ASSESSMENT STUDY FOR 'A' CATEGORY RIVER VALLEY PROJECTS AND INFORMATION TO BE INCLUDED IN EIA/EMP REPORT**

**(1) Scope of EIA Studies**

The EIA Report should identify the relevant environmental concerns and focus on potential impacts that may change due to the construction of proposed project. Based on the baseline data collected for three (3) seasons (Pre-monsoon, Monsoon and winter seasons), the status of the existing environment in the area and capacity to bear the impact on this should be analyzed. Based on this analysis, the mitigation measures for minimizing the impact shall be suggested in the EIA/EMP study.

**(2) Details of the Project and Site**

- General introduction about the proposed project.
- Details of project and site giving L-sections of all U/S and D/S projects of River with all relevant maps and figures. Connect such information as to establish the total length of interference of Natural River and the committed unrestricted release from the site of diversion into the main river.
- A map of boundary of the project site giving details of protected areas in the vicinity of project location.
- Location details on a map of the project area with contours indicating main project features. The project layout shall be superimposed on a contour map of ground elevation showing main project features (viz, location of dam, Head works, main canal, branch canals, quarrying etc.) shall be depicted in a scaled map.
- Layout details and map of the project along with contours with project components clearly marked with proper scale maps of at least a 1:50,000 scale and printed at least on A3 scale for clarity.
- Existence of National Park, Sanctuary, Biosphere Reserve etc. in the study area, if any, should be detailed and presented on a map with distinct distances from the project components.
- Drainage pattern and map of the river catchment up to the proposed project site.
- Delineation of critically degraded areas in the directly draining catchment on the basis of silt Yield Index as per the methodology of All India Soil and Land Use Survey of India.
- Soil characteristics and map of the project area.
- Geological and seismo-tectonic details and maps of the area surrounding the proposed project site showing location of dam site and canal site.
- Remote Sensing studies, interpretation of satellite imagery, topographic sheets along with ground verification shall be used to develop the land use/land cover pattern of the study using overlaying mapping techniques viz. Geographic Information System (GIS), False Color composite (FCC) generated from satellite data of project area.
- Land details including forests, private and other land.

- Demarcation of snow fed and rain fed areas for a realistic estimate of the water availability.

### **(3) Description of Environment and Baseline Data**

To know the present status of environment in the area, baseline data with respect to environmental components air, water, noise, soil, land and biology & biodiversity (flora & fauna), wildlife, socio-economic status etc. should be collected with 10 km radius of the main components of the project/site i.e. dam site and power house site. The air quality and noise are to be monitored at such locations which are environmentally & ecologically more sensitive in the study area. The baseline data should be collected for 3 seasons (Pre-Monsoon, Monsoon and Post Monsoon seasons). Flora/fauna in the catchment area and command area should be documented. The study area should comprise of the following:

- Catchment area up-to the dam site.
- Submergence Area
- Project area or the direct impact area should comprise of area falling within 10 km radius from periphery of reservoir, land coming under submergence and area downstream of dam

### **(4) Details of the Methodology**

- The methodology followed for collection of base line data along with details of number of samples and their locations in the map should be included.
- Study area should be demarcated properly on the appropriate scale map.
- Sampling sites should be depicted on map for each parameter with proper legends.
- For forest classification, Champion and Seth (1968) classification should be followed.

### **(5) Methodology for collection of Biodiversity Data**

- The number of sampling locations should be adequate to get a reasonable idea of the diversity and other attributes of flora and fauna. The guiding principles should be the size of the study area (larger area should have larger number of sampling locations) and inherent diversity at the location, as known from secondary sources (e.g. eastern Himalayan and low altitude sites should have a larger number of sampling locations owing to higher diversity).
- The entire area should be divided in grids of 5km X 5km preferably on a GIS domain. There after 25% of the grids should be randomly selected for sampling of which half should be in the directly affected area (grids including project components such as reservoir, dam, powerhouse, tunnel, canal etc.) and the remaining in the rest of the area (areas of influence in 10 km radius from project components). At such chosen location, the size and number of sampling units (e.g. quadrats in case of flora/transects in case of fauna) must be decided by species area curves and the details of the same (graphs and cumulative number of species in a tabulated form) should be provided in the EIA report. Some of the grids on the edges may not be completely overlapping with the study area boundaries. However these should be counted and considered for selecting 25% of the grids. The number of grids to be surveyed may come out as a

decimal number (i.e. it has an integral and a fractional part) which should be rounded to the next whole number.

- The conventional sampling is likely to miss the presence of rare, endangered and threatened (R.E.T.) species since they often occur in low densities and in case of faunal species are usually secretive in behavior. Reaching the conclusion about the absence of such species in the study area based on such methodology is misleading. It is very important to document the status of such species owing to their high conservation value. Hence likely presence of such species should be ascertained from secondary sources by a proper literature survey for the said area including referring to field guides which are now available for many taxonomic groups in India. Even literature from studies/surveys in the larger landscapes which include the study area for the concerned project must be referred to since most species from adjoining catchments is likely to be present in the catchments in question. In fact such literature from the entire state *can* be referred to. Once a listing of possible R.E.T. species from the said area is developed, species specific methodologies should be adopted to ascertain their presence in the study area which would be far more conclusive as compared to the conventional sampling. If the need be, modern methods like camera trapping can be resorted to, particularly for areas in the eastern Himalayas and for secretive/nocturnal species. A detailed listing of the literature referred to, for developing lists of R.E.T. species should be provided in the EIA reports.
- The R.E.T. species referred to in this point should include species listed in Schedule I and II of Wildlife (Protection) Act, 1972 and those listed in the red data books (BSI, ZSI and IUCN).

#### **(6) Components of the EIA Study**

Various aspects to be studied and provided in the EIA/EMP report are as follows:

##### **A. Physical and Chemical Environment**

##### **(i) Geographical, Geological & Geophysical Aspects and Seismo-Tectonics:**

- Physical geography, Topography, Regional Geological aspects and structure of the Catchment.
- Tectonics, seismicity and history of past earthquakes in the area. A site specific study of the earthquake parameters will be done. The results of the site specific earthquake design shall be sent for approval of the NCSDP (National committee of Seismic Design Parameters, Central water commission, New Delhi. for large dams.
- Landslide zone or area prone to landslide existing in the study area should be examined.
- Presence of important economic mineral deposit, if any.
- Justification for location & execution of the project in relation to structural components (dam height).
- Impact of project on geological environment.

##### **(ii) Meteorology, Air and Noise:**

- Meteorology (viz. Temperature, Relative humidity, wind speed/direction etc.) to be collected from nearest IMD station.

- Ambient Air Quality with parameters viz. suspended particulate matter (SPM), respirable suspended particulate matter (RSPM) i.e. suspended particulate matter  $\leq 10$  microns, sulphur dioxide ( $\text{SO}_2$ ) and oxide of Nitrogen ( $\text{NO}_x$ ) in the study area at 6 locations.
- Existing noise levels and traffic density in the study area at 6 locations.

**(iii) Soil Characteristics**

- Soil classification, physical parameters (viz., texture, porosity, bulk density and water holding capacity) and chemical parameters (viz. pH, electrical conductivity, magnesium, calcium, total alkalinity, chlorides, sodium, potassium, organic carbon, available potassium, available phosphorus, SAR, nitrogen and salinity, etc.) (6 locations).

**(iv) Remote sensing and GIS Studies**

- Generation of thematic maps viz., slope map, drainage map, soil map, land use and land cover map, etc. Based on these, thematic maps, an erosion intensity map should be prepared.
- New configuration map to be given in the EIA Report.

**(v) Water Quality**

- History of the ground water table fluctuation in the study area.
- Water quality for both surface water and ground water for (i) Physical parameters (pH, temperature, electrical conductivity, TSS); (ii) Chemical parameters (Alkalinity, Hardness, BOD, COD,  $\text{NO}_2$ ,  $\text{PO}_4$ , Cl,  $\text{SO}_4$ , Na, K, -Ca, Mg, Silica, Oil & Grease, phenolic compounds, residual sodium carbonate); (iii) Bacteriological parameter (MPN, Total conform) and (iv) Heavy Metals (Pb, As, Fig, Cd, Cr-6, total Cr, Cu, Zn, Fe) (6 locations).
- Delineation of sub and micro-watersheds, their locations and extent based on the All India Soil and Land Use Survey of India (AISLUS), Department of Agriculture, Government of India. Erosion levels in each micro-watershed and prioritization of micro-watershed through silt yield index (SYI) method of AISLUS

**B. Water Environment and Hydrology**

- Hydro-Meteorology of the project viz. precipitation (snowfall, rainfall), temperature, relative humidity, etc. Hydro-meteorological studies in the catchment area should be established along-with real time telemetry and data acquisition system for inflows monitoring.
- Run off, discharge, water availability for the project, etc.
- Basin characteristics.
- Catastrophic events like cloud bursts and flash floods, if any, should be documented.
- For estimation of Sedimentation Rate, direct sampling of river flow is to be done during the EIA study. The study should be conducted for minimum 1 year actual silt flow rate to be expressed in ha-in  $\text{km}^2$  year-1.
- Sedimentation data available with CWC may be used to find out the loss in storage over the years.
- Set-up G&D monitoring station in the catchment area for collecting data during the investigation.
- Flow series, 10 daily with 90%, 75%, and 50% dependable years discharges.

- A table of 10 daily water discharge in 75% dependable year showing the intercepted discharge at the barrage, diversion for irrigation, environmental and other flow releases downstream of the barrage shall be included in the EIA report.
- Environmental flow release would be 20% of average of four consecutive months of 90% dependable year in lean season, 25% in non-monsoon & non-lean season and 30% in monsoon to be followed corresponding to 90% dependable year. A site specific study on minimum environment flow should be carried out
- Hydrological studies/data as approved by CWC shall be utilized in the preparation of ETA/EMP report. Actual hydrological annual yield may also be given in the report.
- A minimum of 1 km distance from the tip of the reservoir to the tail race tunnel should be maintained between upstream and downstream projects.

### C Biological Environment

Besides primary studies, review of secondary data/literature published for project area on flora & fauna including RET species shall be reported in EIA/EMP report

#### (i) Flora

- Characterization of forest types (as per Champion and Seth method) in the study area and extent of each forest type as per the Forest Working Plan.
- Documentation of all plant species i.e. Angiosperm, Gymnosperm, Pteridophytes, Bryophytes (all groups). All species list should be provided.
- General vegetation profile and floral diversity covering all groups of flora including lichens and orchids. A species wise list may be provided.
- Assessment of plant species with respect to dominance, density, frequency, abundance, diversity index, similarity index, importance value index (WI), Shannon Weiner index etc. of the species to be provided. Methodology used for calculating various diversity indices along with details of locations of quadrates, size of quadrates etc. to be reported within the study area in different ecosystems.
- Existence of National park, Sanctuary, Biosphere Reserve etc in the study area, if any, should be detailed.
- Economically important species like medicinal plants, timber, fuel wood etc.
- Details of endemic species found in the project area.
- Flora under RET categories should be documented using International Union for the Conservation of Nature and Natural Resources (IUCN) criteria and Botanical Survey of India's Red Data list along-with economic significance. Species diversity curve for RET species should be given.
- Cropping pattern and Horticultural Practices in the study area.
- Biodiversity study shall be carried out by associating a reputed organization as per the list of such institutes is available on MoEF & CC website.

#### (ii) Fauna:

- Fauna study and inventorisation should be carried out for all groups of animals in the study area. Their present status along with Schedule of the species.
- Information (authenticated) on Avi-fauna and wildlife in the study area.
- Status of avifauna their resident/ migratory/ passage migrants etc.
- Documentation of butterflies, if any, found in the area.

- Details of endemic species found in the project area.
- RET species-voucher specimens should be collected along-with GPS readings to facilitate rehabilitation. RET faunal species to be classified as per IUCN Red Data list and as per different schedule of Indian Wildlife (Protection) Act, 1972.
- Existence of barriers and corridors, if any, for wild animals.
- Compensatory afforestation to compensate the green belt area that will be removed, if any, as part of the proposed project development and loss of biodiversity.
- Collection of primary data on agricultural activity, crop and their productivity and irrigation facilities components.

#### **D Aquatic Ecology**

- Documentation of aquatic fauna like macro-invertebrates, zooplankton, phytoplankton, benthos etc.
- Fish and fisheries, their migration and breeding grounds.
- Fish diversity composition and maximum length & weight of the measured populations to be studies for estimation of environmental flow.
- Conservation status of aquatic fauna.
- Sampling for aquatic ecology and fisheries must be conducted during the 3 seasons – Pre-monsoon (summer), monsoon and winter. Sizes (length & weight) of important fish species need to be collected and breeding and feeding grounds should be identified along the project site or in vicinity.

#### **E Socio-Economic**

- Collection of baseline data on human settlements, health status of the community and existing infrastructure facilities for social welfare including sources of livelihood, job opportunities and safety' and security of workers and surroundings population.
- Collection of information with respect to social awareness about the developmental activity in the area and social welfare measures existing and proposed by project proponent.
- Collection of information on sensitive habitat of historical, cultural and religious and ecological importance.
- The socio-economic survey/ profile within 10 km of the study area for demographic profile; Economic Structure; Developmental Profile; Agricultural Practices; Infrastructure, education facilities; health and sanitation facilities; available communication network etc.
- Documentation of demographic, Ethnographic, Economic Structure and development profile of the area.
- Information on Agricultural Practices, Cultural and aesthetic sites, Infrastructure facilities etc.
- Information on the dependence of the local people on minor forest produce and their cattle grazing rights in the forest land.
- List of all the Project Affected Families with their name, age, educational qualification, family size, sex, religion, caste, sources of income, land & house holdings, other properties, occupation, source of income., house/land to be acquired for the project and house/land left with the family, any other property, possession of cattle, type of house etc.
- In addition to socio-economic aspects of the study area, a separate chapter on socio-cultural aspects based upon study on Ethnography of the area should be provided.

## **(7) Impact Prediction and Mitigation Measures**

The adverse impact due to the proposed project should be assessed and effective mitigation steps to abate these impacts should be described,

### **(i) Air Environment**

- Changes in ambient and ground level concentrations due to total emissions from point, line and area sources.
- Effect on soil, material, vegetation and human health.
- Impact of emissions from DG set used for power during the construction, if any, on air environment.
- Pollution due to fuel combustion in equipment and vehicles
- Fugitive emissions from various source

### **(ii) Water Environment**

- Changes in surface and ground water quality
- Steps to develop pisci-culture and recreational facilities
- Changes in hydraulic regime and downstream flow.
- Water pollution due to disposal of sewage
- Water pollution from labour colonies/ camps and washing equipment.

### **(iii) Land Environment**

- Adverse impact on land stability, catchment of soil erosion, reservoir sedimentation and spring flow (if any) (a) due to considerable road construction / widening activity (b) interference of reservoir with the inflowing stream (c) blasting\_ for commissioning of HRT, TRT and some other structures.
- Changes in land use / land cover and drainage pattern
- Immigration of labour population
- Quarrying operation and muck disposal
- Changes in land quality including effects of waste disposal
- River bank and their stability
- Impact clue to submergence.

### **(iv) Biological Environment**

- Impact on forests, flora, fauna including wildlife, migratory avi-fauna, rare and endangered species, medicinal plants etc.
- Pressure on existing natural resources
- Deforestation and disturbance to wildlife, habitat fragmentation and wild animal's migratory corridors
- Compensatory afforestation-identification of suitable native tree species for compensatory afforestation and green belt.
- Impact on fish migration and habitat degradation due to decreased flow of water
- Impact on breeding and nesting grounds of animals and fish.

### **(v) Socio-economic aspects**

- Impact on local community including demographic profile.
- Impact on socio-economic status
- Impact on economic status.
- Impact on human health due to water / vector borne disease

- Impact on increase traffic
- Impact on Holy Places and Tourism
- Impacts of blasting activity during project construction which generally destabilize the land mass and leads to landslides, damage to properties and drying up of natural springs and cause noise population will be studies. Proper record shall be maintained of the baseline information in the post project period.
- Positive and negative impacts likely to be accrued due to the project are listed.

#### (8) Environmental Management Plans

- **Catchment Area Treatment (CAT) Plan** should be prepared micro-watershed wise. Identification of free draining/ directly draining catchment based upon Remote Sensing and. Geographical Information System (GIS) methodology and Sediment Yield Index (SYI) method of SLUSOI coupled with ground survey. Areas or watersheds falling under 'very severe' and 'severe' erosion categories are required to be treated. Both biological as well as engineering measures should be proposed in consultation with State Forest Department. Year-wise schedule of work and monetary allocation should be provided. Mitigation measures to check shifting cultivation in the catchment area with provision for alternative and better agricultural practices should be included.
- **Command Area Development (CAD) Plan** giving details of implementation schedule with a sample CAD plan.
- **Compensatory Afforestation** shall be prepared by the State Forest Department in lieu of the forest land proposed to be diverted for construction of the project as per the Forest (Conservation) Act, 1980. Choice of plants for afforestation should include native and RET species, if any.
- **Biodiversity and Wildlife Conservation and Management Plan** for the conservation and preservation of rare, endangered or endemic floral/ faunal species or some National Park/Sanctuary/ Biosphere Reserve or other protected area is going to get affected directly or indirectly by construction of the project, then suitable conservation measures should be prepared in consultation with the State Forest Department.
- **Resettlement and Rehabilitation (R&R) Plan** need to be prepared with consultation of the project affected families and the State Government: Detailed budgetary estimates are to be provided. Resettlements site should be identified. The plan will also incorporate community development strategies. *Land acquisition for the project whose land is to be acquired should be suitably compensated in accordance with the law of the land and prevailling guidelines. R&R Plan is to be formulated as per new Act, 2013 which came into force w.e.f. 1.1.2014.*
- **Green Belt Development Plan** along the periphery of the reservoir, approach roads around the colonies and other project components, local plant species must be suggested with physical and financial details. Local plant species suitable for greenbelt should be selected.
- **Fisheries Conservation and Management Plan** – Fish fauna inhabiting the affected stretch of river, a specific fisheries management plan should be prepared for river and reservoir. If any migratory fish species is getting affected then the migratory routes, time/season of upstream and downstream migration, spawning grounds etc will be discussed in details.

- **Reservoir Rim Treatment Plan** for stabilization of land slide/ land slip zones, if any, around the reservoir periphery is to be prepared based on detailed survey of geology of the reservoir rim area. Suitable engineering and biological measures for treatment of identified slip zones to be suggested with physical and financial schedule.
- **Muck Disposal Plan** suitable sites for dumping of excavated materials should be identified in consultation with State Pollution Control Board and State Forest Department. All muck disposal sites should be minimum 30 m away from the HFL of river. Plan for rehabilitation of muck disposal sites should also be given. The longitudinal section/cross section of muck disposal sites and approach roads should be given. The plan shall have physical and financial details of the measures proposed.
- **Plan for Restoration of quarry sites** and landscaping of colony areas, working areas, roads etc. Details of the coarse/fine aggregate/clay etc. required for construction of the project and the rock/clay quarries/river shoal sites identified for the project should be discussed along-with the engineering and Biological measures proposed for their restoration with physical and financial details.
- **Study of Design Earthquake Parameters:** A site specific study of earthquake parameters should be done. Results of the site specific earthquake design parameters should be approved by National Committee of Seismic Design Parameters, Central Water commission (NCSDP), New Delhi.
- **Dam Break Analysis and Disaster Management Plan** The outputs of dam break model should be illustrated with appropriate graphs and maps clearly bringing out the impact of Dam Break scenario. The action plan will include Emergency Action and Management plan including measures like preventive action notification, warning procedure and action plan for co-ordination with various authorities.
- **Water, Air and Noise Management Plans** to be implemented during construction and post-construction periods.
- Mitigation measures due to blasting on the structures in the vicinity
- **Groundwater management plan**
- **Public Health Delivery Plan** including the provisions of drinking water supply for local community.
- **Sanitation and Solid waste management plan** for domestic waste from colonies and labour camps etc.
- **Local Area Development Plan** to be formulated in consultation with the Revenue Officials and Village Panchayats. Local skill development schemes should be given. Details of various activities undertaken along with its financial outlay should be provided.
- Environmental safeguards during construction activities including Road Construction.
- **Energy Conservation Measures**
- **Environmental Monitoring Programme** with physical & financial details covering all the aspects of EMP. A summary of cost estimates for all the plans, cost of implementing all the Environmental Management Plans.

- (9) In the EMP, please include a sample CAD plan for a distributary outlet command. Such plan is to show the alignment of irrigation and drainage channels. The components of OFD works to be undertaken may be clearly mentioned along with a time schedule for their completion vis-&-vis the progress of irrigation development.

#### **Additional TOR**

- i. The scheme in its first phase envisages lifting of 90 TMC of floodwater in 60 days during the flood season from the foreshore of the Srisailem project on Krishna river at Yelluru village through five separate stages, ending at K.P. Laxmidevipally village. Therefore, water availability analysis at Yelluru village (point of drawl) during monsoon season is to be submitted to ascertain sufficiency of water available.
- ii. As the area is on fluoride affected zone, therefore, provisions should also be made to recharge the groundwater through proposed reservoirs to dilute fluoride levels.
- iii. Groundwater be treated for removal of fluoride and then the treated water be supplied to the villagers for drinking purposes.
- iv. Provision of e-flow should be ensured for the sustenance of aquatic life in the downstream river.
- v. Land acquired for the project shall be suitably compensated in accordance with the law of the land with the prevailing guidelines.
- vi. Though, total power requirement has been provided, but its firm linkage is to be supported with documents.
- vii. Proof of application for diversion of forestland for non-forest purpose will be submitted to the Ministry within one month, if any.
- viii. Information on species composition in particular to fish species from any previous study/literature should be included.
- ix. The clearance from Standing Committee of NBWL under the Wildlife (Protection) Act, 1972 should be obtained, as applicable.
- x. Wildlife Conservation plan be prepared for the area located within the project and implemented by the project proponent in consultation with the State Forest Department. Wildlife Conservation plan also to be prepared for the impacted area due to construction of the project falling outside the project area and implemented by the local state Forest Department.
- xi. Solid waste management should be planned in details. Land filling of plastic waste shall be avoided and instead proposal for various uses may be proposed in the revised EIA/EMP report.
- xii. Resettlement & Rehabilitation Plan should be implemented as per the prevail guidelines of the Govt. of India .
- xiii. Skill mapping be undertaken for the youths of the affected project area and based on the skill mapping, necessary trainings to the youths be provided for their appropriate engagements in the Project

\*\*\*\*\*

No.J-11013/25/2014-IA.I  
Government of India  
Ministry of Environment & Forests

Indira Paryavaran Bhawan,  
Jor Bagh Road, Ali Ganj,  
New Delhi-11003

Dated the 11<sup>th</sup> August, 2014

OFFICE MEMORANDUM

**Subject: Environment sustainability and CSR related issues-guidelines**

The Environment Impact Assessment (EIA) Notification 2006, issued under the Environment (Protection) Act 1986, as amended from time to time, prescribes the process for granting prior environment clearance (EC) in respect of certain development projects / activities listed out in the Schedule to the notification.

2. Sustainable development has three components, viz., social, economic and environmental. All the three components are closely inter-related and mutually re-enforcing. Considering this, the general structure of EIA document, under Appendix-III to the notification, prescribes inter-alia public consultation, social impact assessment and R&R action plan besides environment management plan (EMP).

3. It is noticed that while there is clarity on the guidelines on EMP, as regards sustainability related issues, different formulations have been prescribed in the conditions in EC letters for the projects under different sectors listed out in Schedule to the EIA Notification, 2006. Thus, there is a need to issue guidelines on the subject.

4. Section 135 of the Companies Act, 2013 deals with corporate social responsibility and Schedule-VII of the Act lists out the activities which may be included by companies in their CSR Policies. The activities relating to "ensuring environmental sustainability", are listed in this schedule. Further, Ministry of Corporate Affairs has also notified the Companies (Corporate Social Responsibility Policy) Rules, 2014.

5. The concept of CSR as provided for in the Companies Act, 2013 and covered under the Companies (Corporate Social Responsibility Policy) Rules, 2014 comes into effect only in case of companies having operating projects and making net profit as also subject to other stipulations contained in the aforesaid Act and Rules. The environment clearance given to a project may involve a situation where the concerned company is yet to make any net profit and / or is not covered under the purview of the aforesaid Act and Rules. Obviously, in such cases, the provisions of aforesaid Act and Rules will not apply.

6. The matter has been further examined in the Ministry of Environment Forests & Climate Change (MoEF&CC). It has been decided that in respect of valid concerns expressed during the public consultations, mitigation issues emerging from social impact assessment and R&R Plan, the project proponents, in EIA / EMP report will clearly state the activities to be covered (both capital as well as recurring costs), the phasing of these activities along with costs and also as to how such expenditure would be met. The costs and the timelines for various activities as prepared by the project proponent may be looked into by the concerned Expert Appraisal Committee (EAC) for their reasonableness and appropriate recommendations in the matter reflected in the minutes of EAC meeting. In case these activities (or some of these activities) are proposed to be covered by the project proponent under CSR activities, the project proponent should commit providing for the same. In either case, the position regarding the agreed activities, their funding mechanism and the phasing should be clearly reflected in the EC letter.

7. The obligation on part of the project proponents, as mentioned in para 5 above, should be stated at the TOR stage itself as one of the TORs for the project.

8. All Sectoral EACs will follow the aforesaid procedure on environment sustainability and CSR related issues while appraising the projects and do away with the existing practices being followed on the subject, if any.

9. These guidelines will apply mutatis mutandis to SEACs/SEIAAs.

10. This issues with the approval of the Component Authority.

**ORDER:**

The Revenue Divisional Officer, Nagarkurnool informed that Executive Engineer, Palumuru RangaReddy Lift Irrigation Scheme, Nagarkurnool Division-I has requested to acquire the land an extent in **Ac. 18-18gts** situated at **Yellur Village of Kollapur Mandal** for formation of Open canal under Palmuru RangaReddy Lift Irrigation Scheme.

In this case P.N. U/s 11 (1) of L.A, R&R Act.2013 (Central Act.30 of 2013) was issued calling claims & objections if any allowing (60) days of time vide Collector, Nagarkurnool Proc. No. G/2120/2017, Dt: 06-09-2017 & Published in two Daily news papers as required under Section 11 (1). No claims and objections were received from any side in this case within the stipulated time.

(Contd.....2)

The land owners mentioned below consented for voluntary acquisition (sale) of land under Section 30-A of the Telangana Amendment Act, 2016 (Act No. 21 of 2017) in RFCT in L.A, R & R Act. Central Act. 30 of 2013 read with rule 11 to 15 of The Telangana State Land Acquisition (Consent Award voluntarily Acquisition and lump sum payment towards R&R) Rules 2017 in Form E (1).

In pursuance of the provisions under Rules 8 of The Telangana State land acquisition (Consent Award, voluntarily Acquisition and lump sum payment towards Rehabilitation and Resettlement) rules 2017 Negotiation Committee for Acquisition of land for Palamuru RangaReddy Lift Irrigation Scheme was constituted.

The Meeting was conducted on 14-07-2017 at Collector's Office, Nagarkurnool with the members and land owners for finalization of compensation.

It is reported by the Land Acquisition Officer and Revenue Divisional Officer, Nagarkurnool that the lands under acquisition for Palamuru RangaReddy Lift Irrigation Scheme in Yellur Village of Kollapur Mandal are categorized as Dry / Single Crop / Double Crop (Dry / Wet having lands Bore wells). The Negotiation Committee on deliberations finalized the following rates for payment as all inclusive land compensation for the lands being acquired under provisions of Voluntary Acquisition (sale) of land under rules 11 to 15 of the provisions of The Telangana State land Acquisition (Consent Award, voluntarily Acquisition and lump sum payment towards Rehabilitation and Resettlement) rules 2017.

Sl. No.	Classification of land	Rate approved by the Committee
1	Dry Lands	Rs.3.50 lakhs per acre including all benefits
2	Dry Lands Single Crop	@ Rs.4.50 lakhs per acre including all benefits
3	Double Crop Dry / Wet Lands having Bore Soruce	@ Rs.5.50 lakhs per acre including all benefits

Out of the total extent under acquisition i.e. **Ac.18-18gts** the land owners to an extent of **Ac.18-18gts** accepted the above said negotiated rates and gave their voluntary willingness in Prescribed Proforma (E1) available in Telangana State land Acquisition (Consent Award, voluntarily Acquisition and lump sum payment towards Rehabilitation and Resettlement) Rules 2017. The land owners further requested to pay the land compensation under Section 30 A of voluntary Acquisition of land. Hence the orders are passed to the extent of **Ac.18-18gts** only instead of total extent **Ac.18-18gts**. For the balance area separate orders will be issued soon after receipt of their agreements required under Form G-III of the above said Rules.

Therefore, it is decided to pay the land compensation to the following land owners under voluntary Acquisition of land as shown against each duly following the Provisions of Section 30-A of Telangana Act. 21 of 2017, the RFCT in L.A, R&R Act (Telangana Amendment) Act. 2016 and under rule 11-15 of Telangana State Land Acquisition (Consent Award, Voluntarily Acquisition and lump sum payment towards Rehabilitation and Resettlement) Rules 2017. Pattadar / Land owner wise details are as follows:-
