

Site inspection report

For the purpose of constructing ROB from KM 48.603 to KM 49.817 of NH-131A in Katihar District, a proposal for diversion of 0.382 Hectare of forest land has been submitted by Executive Engineer, N.H. Division, Purnea under Forest (Conservation) Act 1980. I have inspected the site on 22.05.2018 with Range Officer of Forest, Katihar and the concerned Assistant Engineer of N.H. Division. As per the proposal, the forest land to be diverted has been calculated on Formation width/Embankment of 13.5 m wide. For this work only 0.382 Hectare of forest land will be diverted, the calculation of which is attached as annexure-II of the proposal. For the purpose of constructing ROB total 29 trees are required to be felled. The species wise details of enumeration list is attached with the proposal.

During inspection no endangered/unique species of flora and fauna has been found. Also no protected archaeological/heritage site/ defence establishment is located near the site.

N.H.-131A is very important road of Katihar District. Due to heavy traffic on this road and thickly populated area of Durgapur construction of ROB is very much essential and requirement of proposed forest land is the barest minimum. Till the date of inspection no work in violation of the Act has been carried out.

Divisional Forest Officer,
Purnea Forest Division Purnea.
