

Recommendation

Laying of UG cable through the existing road is the only option for the poor people living in the Rosemala enclosure for getting electricity connection. Lot of difficulties are faced by the Rosemala inhabitants in terms of transportation system, education facilities, electricity connection etc. since they are inside the sanctuary. No trees have to be felled or no damage to the existing forest will occur due to this project. No rare/ endangered/ unique species of flora and fauna are found in the proposed area. No protected archaeological / heritage site / defence establishment / any other important monument is located in the proposed area. The requirement of forest land as proposed by the user agency is 0.035 ha which is unavoidable and is the barest minimum for the project. The natives of Rosemala enclosure are very poor and definitely such a scheme will be highly beneficial for such people living inside this area for many years. A total of 400 families would get benefited out of this scheme. Hence, necessary approval may be given for the implementation of the project.
