In the proposed road length there is no tree growth but surrounding areas are having moderate dense forest with Misc. tree species. This proposed road work is for absolutely for infrastructure development of interior tribal areas effected with Left Wing Extremism. This project does not cause any harm to the local flora and fauna. The proposed project is a public important project having basic amenity creation up to the remotest village.

All the sites falling in the forest type of Southern Tropical Dry Deciduous Forests (5A) as per Champion and Seth classification. The surrounding vegetation of the proposed road is miscellaneous type with predominant species of *Tectona Grandis*, *Terminalia tomentosa*, *Anogeissus latifolia*, *Terminalia arjuna*, *Xylia xylocarpa*, *Pterocarpus marsupium* etc., The proposed forest land for diversion for the proposed project is barest minimum and unavoidable. The villages which were benefitted by the proposed road way will be mostly tribal inhabitants. The soil type ranges from Red soil to loamy and Black cotton soils. The average crop density of the vegetation is 0.40 to 0.60 in all the sites. All the sites are flat lands and not vulnerable to erosion.
