

INSPECTION REPORT OF " MKD " SITE OF OIL INDIA LTD.

The 'MKD' Site within Mesaki Reserve Forest under Saikhowa Range of Doomdooma Division was inspected by me on 12.05.2018. During my inspection, I found that the area of MKD encloses 3.545 Hectares which is located in Compartment No.1 of Mesaki RF. There are 70 (Seventy) Nos. of trees and 117 (One hundred seventeen) Nos. of poles (Urium, Simul, Khokon, Ajar etc) and found predominantly in the area. The site is not protected for archaeological or heritage or defence establishment or any other important monument. The drilling site is selected after extensive geological studies which indicate the strong possibilities of crude oil and hydrocarbon deposition. The forest land required for drilling purpose is minimum for the project. So far my knowledge is concerned, no work in violation of the Assam Forest Regulation or Wild Life Protection Act has been carried out by Oil India limited in this particular site. The area of Mesaki RF is 1366.80 Hectares. *The site was again inspected on 08/06/2018.*
