

Recommendation from Divisional Forest Officer

The proposed area was leased to the Institute for 25 years prior to 1980. The lease expired in 2001. The land is under possession of a Central Government's Research Institute and is put to use for research. The area is developed into a research station with sufficient infrastructure. This is also acting as a field information centre to local farmers. No adverse effects to forest or wildlife are caused by this station. Hence, recommended.
