

Attachment-1 Project Brief

The Indian Academy of Highway Engineers (IAHE) has been entrusted with the assignment of Project Management Consultancy Phase I including preparation of Detailed Project Report of selected stretches/corridors of National Highways/ State Roads (New NH-320G) for Two/ Four laning with paved shoulder configuration.

The Project road started from Haat Gamhariya T-junction (Existing Chainage km 0+000) and ended at Kolebira T-junction (Existing Chainage km 180+000) in the State of Jharkhand.

For the convenience of construction, The DPR report of project has been further divided in to 4 packages

PACKAGE- I- From km 0+000 to km 43+000

PACKAGE- II- From km 43+000 to km 89+300

PACKAGE- III- From km 89+300 to km 122+700

PACKAGE- IV- From Existing chainage 122+700 (Design chainage 119+520) to Existing chainage 180+000 (Design chainage 176+310)

This report is prepared for PACKAGE- IV

Project Location

The project corridor is a State Highway (SH-4). It is located in Jharkhand state starts at Haat Gamhariya in West Singhbhum district, traverses through Haat Gamhariya taluka of West Singhbhum district which ends at Kolebira junction. The project road lies between latitude 22°15'38.2"N to 22°41'55.5"N and longitude 85°44'09.3"E to 84°41'34.9"E. The project corridor also connects the major urban centers of the region, viz. Jagannathpur, Baraiburu, Saddle, Manoharpur, Anandpur and Bano. It provides connectivity with NH-20 and NH-143.

Existing Project Road Feature

The Project road from Ghat bazaar to Kolebira is SH 4(Old SH-51) falls in the districts of Simdega in the state of Jharkhand. The approximate length of the project road is 56.790 Km.

A brief description of the salient features of this corridor is given in table below.

Table- 1 Project Summary

| | |
|---------------------------------|---|
| Length of the Project Road (Km) | 56.790 km |
| Right of Way | 25 m |
| Major Junctions | 2 |
| Minor Junctions | 15 |
| Major Bridges | 1 |
| Minor Bridges | 17 |
| Culverts | Total No. of culverts-132 Slab culvert-131, Pipe culvert-1 |
| Level Crossings | 1 |

| | |
|---------------------|------|
| Traffic (Base year) | 2020 |
|---------------------|------|

Table -2 Existing Built-Up Area

| Sl.No. | Existing Chainage | | Village Name |
|--------|-------------------|---------|--------------------|
| | FROM | TO | |
| 1 | 125.000 | 125.200 | SAUBERA VILLAGE |
| 2 | 126.400 | 127.000 | BOGURATOLI VILLAGE |
| 3 | 127.600 | 128.800 | HURPI VILLAGE |
| 4 | 130.000 | 131.000 | HATINGHORE VILLAGE |
| 5 | 134.000 | 134.400 | GARRA VILLAGE |
| 6 | 135.800 | 136.200 | LATAKEL VILLAGE |
| 7 | 137.200 | 137.800 | KONAROA VILLAGE |
| 8 | 138.600 | 139.000 | SODA VILLAGE |
| 9 | 139.600 | 140.200 | PARO VILLAGE |
| 1 | 140.200 | 141.000 | NOMIL VILLAGE |
| 1 | 142.000 | 142.400 | BANKI VILLAGE |
| 1 | 144.400 | 144.800 | LOASOKRA VILLAGE |
| 1 | 149.000 | 149.800 | UKAULI VILLAGE |
| 1 | 154.000 | 155.600 | BANO VILLAGE |
| 1 | 157.600 | 158.600 | JARAKEL VILLAGE |
| 1 | 160.400 | 162.200 | LACHRAGARH VILLAGE |
| 1 | 164.200 | 166.200 | RAMJORI VILLAGE |
| 1 | 167.600 | 168.600 | KALHATOLI VILLAGE |
| 1 | 168.600 | 169.200 | DHOSIARI VILLAGE |
| 2 | 174.000 | 174.600 | RAISIA VILLAGE |
| 2 | 176.400 | 177.000 | BONGRAM VILLAGE |
| 2 | 179.000 | 180.600 | KOLEBIRA VILLAGE |

Project Development Plan

The proposed improvement plans was laid in terms required lane configuration based on the findings and the potential of the project area to attract diversion from various corridors. All the improvement plans was prepared strictly adhering to the IRC guidelines prepared for public and private participation development of projects, any specific deviations such necessitates will be discussed with IAHE and MoRTH before they are put in the project design.

Structural proposal – The structure proposal was prepared on the structural soundness, the remaining life and future requirements. In general all submersible bridges will be replaced by high level bridges and all the pipe culverts will be replaced by box culverts as predominantly NP-2 has been used based on the earlier specification and project requirements.

The project improvement proposals identified for the project road are:

- Lane configuration (Two lane with paved shoulder)

- Typical cross section for Urban and Rural section of Two lane with paved shoulder
- Widening Schedules (Concentric widening)
- Proposals for CD Structures and other structures
- Project facilities like Bus bay, Truck lay bye, Rest area etc.,
- Bypasses for the major settlement where RoW for widening is not available

Widening Schedule & Geometry

Concentric Widening is followed at majority of the locations along the project road where as at realignment locations eccentric widening is adopted. Design speed of 100kmph and 80kmph has been maintained all through the project road. All the horizontal curves have been designed with a desirable minimum radius of 400m and 250m respectively.

In the following sections, where improvement of the existing road geometrics to the prescribed standards is not possible, the existing road geometrics shall be improved to the extent possible within the given right of way and proper road signs and safety measures shall be provided for safe regulation of fast moving, slow moving and pedestrian traffic:

At which location where minimum design speed (80 kmph) and minimum radius (250m) does not meet, this location has been given in **Table 5**

Table 5 Design Speed & Radius of Horizontal Curve

| Sl. No. | Stretch/Design Chainages (from km to km) | | Type of deficiency | | Remarks |
|---------|---|-------------|--------------------|--------------|---------------------------------|
| | From | To | Radius of curve | Design Speed | |
| 1 | 123+675.398 | 123+828.846 | 250 | 65 | Protected Forest & Ghat Section |
| | 124+303.493 | 124+497.252 | | | |
| 3 | 149+992 | 150+095.409 | 150 | 65 | " |
| 4 | 150+136.807 | 150+296.235 | 150 | 65 | " |
| 5 | 150+621.922 | 150+770.924 | 150 | 65 | " |

| 7 | 150+954.384 | 151+068.322 | 150 | 65 | " |
| 8 | 151+074.926 | 151+158.688 | 200 | 65 | " |
| 9 | 151+631.504 | 151+914.757 | 125 | 50 | " |
| 10 | 151+950.252 | 152+108.609 | 100 | 50 | " |
| 11 | 152+127.713 | 152+329.950 | 200 | 65 | " |

Pavement Design

The proposed thickness of the different layers computed according to the guidelines of IRC: 58- 2015 and are presented in below.

Table 6 New Pavement Composition

| Homogenous Section (Km) | | | C B R (%) | MSA | | Recommended Overlay (mm) | | Adopted Pavement Composition in Widening Position (mm) | | | | SECTION |
|-------------------------|---------|-------------|-----------|--------|---------|--------------------------|-------|--|-------|-----|-------|---------|
| From | To | Length (km) | | Actual | Adopted | B C | D B M | B C | D B M | W M | G S B | |
| 122+700 | 180+600 | 57.9 | 10 | 18.58 | 20 | 40 | 60 | 40 | 80 | 250 | 200 | HS-III |

Structures Proposal
