

UNDERTAKING REGARDING CUTTING/RETAINING OF TREES

1. Though during enumeration of trees to be cut, utmost care and effort have been taken to minimize the requirement of cutting of trees. However, during construction any tree out of 1461 trees in the ropeway corridor (right of way), which are either in growing stage or its height is short, that can be accommodated for next 5 to 6 years without compromising safety and operational requirements, then that trees will not be cut at present and the trees will be cut only when it became a necessary.
2. Further, in the ropeway corridor, wherever possible, we will plant trees which will grow to shorter height, in place of long trees which are to be cut, to maintain and improve vegetation and greenery.
3. We assure you that being the responsible organization all possible measures will be taken to maintain and improve the ecology of the Chamunda and improvement of catchment. We will provide full support to Forest Department in this regard.
