

TREE PROTECTION PLAN

Project Title: Construction of 4/6 Laning of Arrah-Sasaram-Patna Road section of NH-119A from Km 40+450 to Km 84+300 under Bharatmala Pariyojana (Lot-7/Package-2) in the State of Bihar (Package-II)

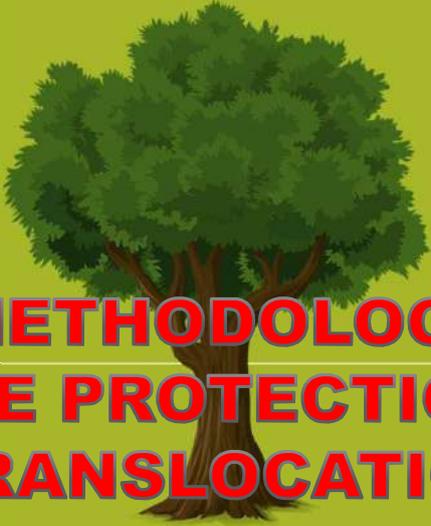

Forest Proposal No. : FP/BR/ROAD/157384/2022
Area of Forest Land : 22.716 Hectare
Forest Division Bhojpur: 22.716 Hectare

Name of Work

Diversion of 22.716 Ha Forest land for Construction of 4/6 Laning of Arrah-Sasaram-Patna Road section of NH-119A from Km 40+450 to Km 84+300 under Bharatmala Pariyojana (Lot-7/Package-2) in the State of Bihar (Package-II)

Executing Agency

National Highway Authority of India
(Ministry of Road Transport & Highways, Government of India)
Project Implementation Unit (PIU) – Patna
Shivmitra Apartment, B Block, Vivekanand Marg
Boring Road, Patna – 800013 (Bihar)

METHODOLOGY TREE PROTECTION & TRANSLOCATION

Needs for the transplantation

- To conserve the large sized trees as well to avoid green felling
- To conserve rare endangered and threatened trees
- To provide shelter and food for the birds
- To conserve the ecosystem

CRITERIA FOR SELECTION OF TREES FOR TRANSPLANTING

- BASED ON GIRTH – 0.3 m to 1.5 m
- BASED ON HEIGHT – 4 m to 11 m
- BASED ON AGE – 15 years to 45 years (younger trees perform well than the older trees)
- BASED ON ROOTSYSTEM - Fibrous root system (more survival rate)
- BASED ON CHARACTERS OF ADOPTABILITY (adoptable for climatic and edaphic conditions)
- BASED ON THE SILVICULTURAL CHARACTERS – (root suckering, coppicing)

Shocks observed during the transplantation to the tree

Mainly 4 times shocks observed during the transplanting

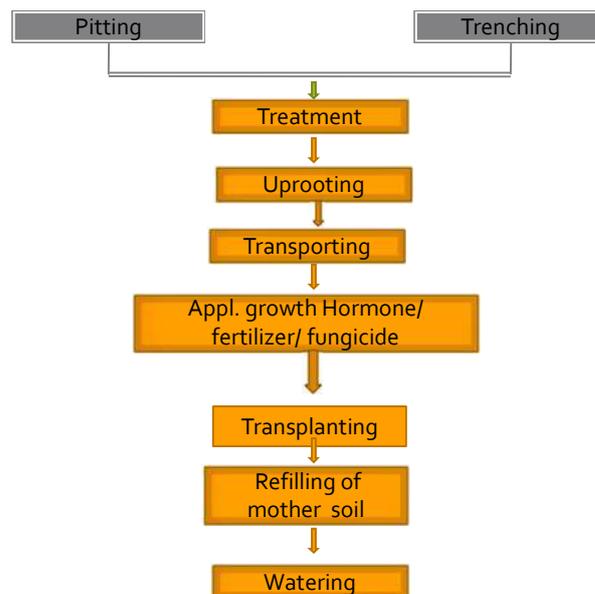

- Exposure to sun –Sudden exposure cause damage to roots
- Uprooting of trees – since it is positively shows geotrophic nature which cause sudden shock while uprooting
- Transportation shocks- while transporting disturbance to trees
- While planting in another new place and soil

Season for the transplanting

Rainy and winter season is prescribed for successful transplantation.

Overview of process

1) Pitting (planting site):

- Size of pit :3 x 3 x 3 m (depends on root stock and ball of earth)
- Time of pitting : 5 days before transplanting
- Watering:1 tanker (5000 ltr) of watering per day is done up to 5 days to facilitate easy working(uplifting site and translocation site)

Pit size

S. No.	Pit size (m ³)	Girth class (m)	Size of the tree
1	2×2×2	0.3 to 0.5	Small
2	2.5×2.5×2.5	0.51 to 1.0	Medium
3	3×3×3	1.01 to 1.5	Large

Based on the size of the tree the pit size is decided and excavated

2) Trenching:

- Purpose: facilitate easy working
- Time of Trenching: 5 days before transplanting
- Size: 2 x 2 m, 2.5 x 2.5 m or 3 x 3 m (depends on root system and size of the tree)
- Watering: should be daily once

3) Pre Treatment:

S. No.	Name of Agent	Chemical Name	Application	Quantity/tree (liters)
1	Anti termite	Chloropyriphos 20% EC	4 ml / 3 liter of water	8
2	Antibacterial	Bactinash 200	17 gms / 3 liter of water	2
3	Antifungal	Corbondazim (Bavistin)	2 gms / 3 liter of water	15
4	Root hormone	IBM	20 ml	
5	Vermicompost	---	15 kg / pit	

Cushioning

In order to protect the outer layer of the tree (bark) the trees are covered with gunny bags and tied with ropes at breast height by which cushioning effect can be ensured.

4) Uprooting:

- Watering in advance will facilitate easy working
- Precaution should be taken so that branches and mother roots are least damaged
- Cloth belt is tied at breast height level
- With the help of crane whole tree is pulled upwards and placed over the transporting vehicle

5) Transporting:

- Since the trees are negatively geotropic the ball of earth is covered with wet gunny bags and also ball of earth can be transported without any damage.
- Once the tree is lifted, then the entire ball with tree is tilted to rest on the transporting vehicle.
- Adequate precaution are taken during transit.
- Branches tide/trimmed properly to avoid any hindrance during transportation.
- Support of Traffic police

6) Transplanting:

- At the transplanting site half the pit is filled with mother earth and Anti termite, Anti bacteria, Anti fungal, Root hormone such as GA3 is applied along with vermicompost in order to boost the growth of newly transplanted trees.
- With the help of crane tree is aligned vertically in the pit which is excavated to translocate a tree.
- To make the pit compact soil is refilled from all side.
- Water is poured till the soil reaches its saturation.
- Damaged branches /roots are treated with cow dung for new sprouting.

Transplanting in other location

Post treatment

- Damaged branch part cutting
- Regular watering
- Burrowing
- Cow dung slurry application
- Fertilizer application

Initial reactions after translocation

- Leaf shedding
- Drying of leaves and branches
- Fungal / Bacterial / insect attack

Signs of successful establishment

- New sprouting – leaves and branches
- Fruiting in translocated trees

Successful in case of creating Habitat for birds

Requirement of resources

Machines: J C B
Tractor
Hitachi
Crane
Water tanker

Materials: Rope
Packing materials (Gunny Bags)
Bedding materials (Vermicompost, pesticide, fungicide, growth promoter)

FACTORS RESPONSIBLE FOR SUCCESS OR FAILURE OF TRANSPLANTING

- Distance of travelling
- Treatment
- Exposure
- Season

“If conservation of trees goes wrong, nothing else will go right”.

Affected Trees Details for Tree Protection Plan (TPP)

Project Name: Construction of 4/6 Laning of Arrah-Sasaram-Patna road section of NH-119A from Km 40+450 to Km 84+300 under Bharatmala Pariyojana(Lot-7/Package-2) in the State of Bihar (Package-II).
