

## JUSTIFICATION FOR REQUIREMENT OF ADDITIONAL FOREST LAND

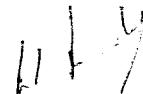

The catchment area of Bhava Khad above Diversion structure comprises of Forest Land only. The Bed slope of the Bhava Khad varies from 1:5 to 1:10 which is an ideal condition for Hydro Electric Generation. The natural regime of the Khad is not disturbed as only 20 m wide Weir has been proposed & the water after generation of electricity would be released back to the Khad on run of the river principle.

The ministry of Environment and Forest has already approved the case for diversions of 4-75-64 Hac of forest land vide there letter no. HPB 690/2011-CHA dated 28/05/2013 in favour of M/s Ramesh Hydro Power Private Limited for construction of Selti-Masrang HEP (24.00 MW).

There is a limited working season at upstream works as of high altitude EL+2900 mtr and to complete project in time; we need additional forest land measuring **0-64-31 Hac** for construction of road, additional muck dumping and bridge across wanger Nala.
