Specific Recommendation for proposal of

Lilo of One Circuit TTPS-Govindpur Transmission Line at GSS Jainamre (34.739ha.)

The proposal for diversion of 34.739ha. of forest land in Bokaro Forest Division may be accepted with the following recommendation:

1. As per the tree enumeration list around 866 trees are to be cut. But my recommendation would be that none of the trees should be cut as the proposed patches of protected forest are very compact parts of wilderness harboring many species of flora and fauna, moreover it would lead to fragmentation of compact patches of forest. However, trees may be removed where the transmission towers would be installed.
2. The entire stretch of forest land proposed for diversion in highly vulnerable to soil erosion so, the user agency should take up erosion presenting measures in the area.

3. There should be regular inspection of the proposed line in the area and report be sent to the office of undersigned.

U. 6.000
