Subject: Alternatives examined for electricity on Luhari plot

Dear Sir,

We, at Unovel Industries Pvt Ltd, have a requirement of 1100 kVA power supply for our project. For the same, we applied with DNH electricity and power board for electrical connection but they are unable to supply that much kVA on existing line. On the other side of the plot is the Maharashtra border and thus, not able to get power supply from there. After considering both option, as putting a line is also most costly and time consuming process for us, we have come to only option to get electricity is to lay down electrical feeder line to get supply from the closest station which is Athal. Our power connection will eventually result in jobs creation and development of Luhari village and also realise the aims of our governments Make in India initiative.

We, thus, request your approval for laying of electrical line. We are grateful for your help in the said matter.

Regards,

Director - Udit Mehta
