

Brief Note on Vulnerability of the Area proposed for Diversion

Project: Construction of 132 kV D/C Pare HEP to Lakhimpur Transmission line.

Forest area proposed for diversion under Lakhimpur Forest Division: 10.381 hac

The forest area proposed for diversion has gentle slope and is not prone to soil erosion. Since it is a linear project and not concerned with any major earth work, so the soil erosion will not be a major issue. Therefore, the proposed diversion of the forest land under Ranga Reserve forest will not have any significant impact on the vulnerability of the area.
