1. *Chlorophyll a* (Chl a) is the primary photosynthetic pigment in most plants and algae. It is a green pigment that absorbs light energy in the blue and red regions of the visible spectrum. Chl a is essential for the light-dependent reactions of photosynthesis, where it converts light energy into chemical energy in the form of ATP and NADPH.

The graph shows the number of people in a queue over time. The y-axis represents the number of people (0 to 80) and the x-axis represents time in minutes (10 to 15). The queue length decreases linearly from 80 at 10 minutes to 0 at 12 minutes, then remains at 0 until 15 minutes.
