

USE OF MINERAL

Gold occur as Native metal as fine gained to coarse gained minerals. Gold may be found in the alluvial deposits or may be embedded in the rocky formation.

The proposed project involves occurrence of Gold as disseminations, stringers and specks in ferruginous quartzite, ultramafics and other sulphides.

Extraction of Metal Gold from the Ore will involve a series of process and beneficiation which is proposed to be done in the company's own Plant within the lease area only. After extraction of Pure Gold, it will be marketed in the Bullion Market to cater requirement of Gold in Ornament / Jewellery Industries, Electronics & Computer Industries etc.
