

SITE INSPECTION REPORT OF NH-302 LUNGLEI TO TLABUNG

PROPOSAL NO-FP/MZ/ROAD/139992/2021

I have inspected Construction of 2-lane hard shoulder configuration of NH-302 Lunglei-to Tlabung in the State of Mizoram under Bharatmala pariyojana on EPC mode and found that There are violation of prevailing rules and Act by way of felling of trees from Government plantation without permission from the competent Authority and deposition of Excavated Spoil/Muck in many place other than Designated Muck disposal site. It seems that Designated Muck disposal site have no plan/ precautionary measure as there is no barrier/cabion wall constructed to stop movement of excavated Soil down to the stream/river in spite of request given to the contractor and NHIDCL. Stay order was also served not to work in the Forest area and in violation of Rules /Acts without permission. Out of seven Designated Muck Disposal Site between Phairuang and Tuichawng where work has been executed ,only two of them are in used . Muck/Excavated Soil were deposited/Disposed off outside Designated Muck Disposal site in many place along the road . Hence Stay order on Widening NH-302 is served on 1st June/2022 untill further order except work on Disposal Plan/Construction of barrier/cabion wall, It is also Found that Diversion of Forest land is unavoidable as the road crosses Forest area/ RRF which runs North- South direction where as the Proposed Road run East west direction. The bare minimum of Forest Land and the bare minimum of Trees will be felled.
