

Specific Recommendation for proposal for Construction of 132/33 KV Grid Substation at Mayapur (Peterwar)

The proposed area Jungle-Jhari forest land has got sparse and shrubby vegetation with density 0.30 (approx). The area is vulnerable to soil erosion and hence a treatment plan with adequate soil conservation measures may be prepared and implemented by user agency under the guidance of Forest Department.

Land measuring 4.04 ha. may be recommended in the national interest as it will improve the electrical power supply the area.

Divisional Forest Officer,
Bokaro Forest Division, Bokaro
