b) Density and Eco- value class	Density - 0.7 and Eco-Class -V					
6	Whether the requirment of forest land as proposed by the User Agency in col. 2 of part - I is unavoidable and barest minimum for the project. If no, recommended area item - wise details of alternative examined.	Yes				
7	Whether the proposal involves any construction of building (including residential) or not? If yes details thereof.	No				

8	a) Whether forest area proposed for diversion is important from wildlife point of view or not.	No
	b) Detail of any rare or endangered or unique species of flora and fauna in proposed forest land. If so, the details thereof.	No rare or endangered or unique species of flora and fauna noticed in the area proposed to be diverted
	c) Aerial distance from nearest boundary of any protected Area (Km)	14 Km (approx) from the boundary of Bani Wildlife Sanctuary, Bani.
	d) Remarks about sensitivity of the forest area likely to be affected due to project.	Proposed forest area is not very sensitive as it is a climax seral stage in ecological succession i.e., Chir woodland which has stabilized over the years. Moreover, pure Chir forests tend to have limited biodiversity due to allelochemy via chir pine needles.
	e) Whether wildlife mitigation plan is required? If yes, reasons thereof.	No
9	Details of vegetation:	Proposed Forest Area identified for diversion is bears the vegetation in the nature of Forest Type 'Siwalik Chir Pine Forests 9/C1a' (Champion & Seth's Classification of India's Forests, 1964)
	a) Total number of trees to be felled	2322
	b) Number of trees to be felled of girth below 60cm	534
	c) Number of trees to be felled of girth above 60cm	1788
	d) Effect of removal of trees on the general ecosystem in the area.	The removal of trees from forest area proposed for diversion is sure to have minor effects on the micro-climate of the area but since the area proposed for diversion is far from habitation and is under lesser biotic pressure thereof, therefore, the diverted area is likely to recuperate naturally over the years as there is already an abundance of rootstock in the form of advanced growth.
10	Back ground note on the proposal (Short Summary)	The PMGSY Road Trembli to Dheota sanctioned in Phase-X under the PMGSY is likely connect the remote villages of Trembli with Dheota and as per the proposed road alignment, intervening villages viz., Batnu, Beli, Cheral, Dror, Dugnoo, Garali, Gothri and Vakari etc. shall also be connected, thereby benefitting 6038 souls. The road is likely to uplift the local rural economy and enhanced connectivity resulting in ease of services delivery in the area.

Tour Note of Site Inspection Report in respect of the PMGSY Road from Trimbli to Dheota

Today on 13-10-2020, the undersigned along with Range Officer, Mahanpur Range; Block Officer, Dhar Dugnoo Block and Beat Guard, Huttar, Bagali & Dhar Dugnoo Beat visited the road alignment of Trimbli to Dheota Road. The undersigned with the forest team walked along the road alignment at intervening stretches. The undersigned checked the Permanent Bench Marks (PBMs) placed at different RDs by the User Agency and the corresponding Tree Enumeration details were also tallied with the RDs. The RD details as well as the enumeration details matched with each other.

The undersigned then made a small detour along the road alignment on both the sides to get a fair idea about the nature of ground vegetation in order to ascertain whether there are any endangered or rare flora in the area. The vegetation on ground was typical of the Forest Type '**Siwalik Chir Pine Forests 9/C1a**' (**Champion & Seth's Classification of India's Forests, 1964**). No endangered/rare/unique flora was noticed in the area under observation. It was also found on enquiry from the field staff that the area proposed for diversion does not for the habitat of any critically endangered wildlife species.

The slope of the area proposed for diversion, in general, is gentle to moderate. The User Agency, though, has proposed for sufficient muck dumping sites at three intervening stretches of the road. However, the user agency shall have to take strict soil conservation measures during execution of cutting in steep stretches to avoid the likely damage that may be inflicted upon the forest crop in the area. Necessary directions in this regard have been issued to the concerned field staff to remain vigilant during the execution phase and to promptly report any violation, if noticed.
