**Site Inspection Report**

On 27<sup>th</sup> May at 2:00 pm, I have inspected the proposed project site along with Executive Engineer and Junior Engineer of Water resource Department. The Proposed Project site, where they wanted to set up Hydrological Observation Station is located near Simsang Bridge. The requirement of forest land for above project is very small measuring about 0.01 ha only. The project site is an open area and not required to cut even single tree. The main purpose of setting up the Hydrological Observation Station near the bridge is to monitor the flow of Simsang River and accordingly data will be recorded. It is basically like a collection of data from the flow of Simsang River. Moreover, it may not bring any disturbance to the wild animals since it is located near the bridge as well as near human habitation area. There is nearby one Forest guard quarter near the proposed site and that house also will not be affected due to setting up of Hydrological Observation Station. One pucca drained also present in that area and no soil erosion is observed. The proposed site is suitable as it is near to the main Simsang River.
