OBSERVATION	ACTION TAKEN REPORT																																			
1. Initially the OB Dumping is proposed in Northern part of the Coal Block which is located at higher elevation than the mining area and is part of larger forested landscape. CCL was asked to explore the possibility of any other location like nearby pits of Kedla OCP, Jharkhand OCP, Parej OCP and Coal Block of CCL, non-forest lands, initial dumping in Pachmo OCP lease area etc, for dumping of OB dump so that the rich bio-diversity of the area could be preserved.	As per C.M.P.D.I.L study, the KBP coal block is surrounded by Operational mines of CCL(except Northern part which is metamorphic) which are either open cast mines or U/G mines. <table><tr><th>Project</th><th>Present Capacity</th><th>Proposed Capacity</th><th>Volume of OB to be generated (MCuM)</th><th>Proposed internal dump (MCum)</th><th>External Dump</th><th>Remarks</th></tr><tr><td>Jharkhand Laiyo OCP</td><td>1 MTY</td><td>1 MTY</td><td>58.95</td><td>58.95</td><td>Nil</td><td>100% internal Dump</td></tr><tr><td>Gose OCP</td><td>-</td><td>2 MTY</td><td>95.90</td><td>33.30</td><td>62.60</td><td>Void will be backfilled with OB of Gose East OCP</td></tr><tr><td>Parej East</td><td>1.75MTY</td><td>1.75 MTY</td><td>94.99</td><td>83.49</td><td>11.50</td><td>88% internal dump, rest area will be maintained as Water Reservoir.</td></tr><tr><td>Kedla OC</td><td>1 MTY</td><td>6 MTY</td><td>PR under process</td><td></td><td></td><td>100% internal dump.</td></tr></table> Further, in respect of Dumping in Pachmo OCP lease area, the total dumping space available is 1.87 Sq Km in Pachmo side. This area can accommodate only 101 Million CuM of OB upto 90 m above the adjoining ground level, whereas the OB likely to be produced from the Kotre-Basantpur side of the leasehold upto 12 year of mining operation (after which internal dumping in Kotre-Basantpur side will start) is likely to be 257.14 Milion CuM. Hence, 156.14 Mcum of OB will require external OB Dump. Further, this will involve annual re-handling of 8.5 Million CuM of OB, which will adversely affect the economic viability of the Mine. 2.CCL was instructed to explore the possibility of starting the mining operation from Pachmo OCP side so that OB dumping on northern side of the Block can be avoided.	A study was done by CMPDIL to assess the dumping requirement if the Mining is started from the Pachmo side with the following result- In the Pachmo side, the gradient of the strata varies from 14 to 17 degree. Due to the steep gradient, concurrent internal dumping is ruled out from safety of mining operation. The dip rise mining will be possible only after the mine attains the maximum depth. To reach the maximum depth the mine has to be operated upto a strike length of about 2.6 km, where as the dip rise length is only 500m(approx.) in Pachmo side, the mine has to run along dip for about 21 years before it attains the maximum depth. Till 21 years, about 469 Mcum OB will be generated which needs to be placed in the external dump. The

	backfilling can commence from 22 nd year onwards. Hence, the possibility of starting the mining operation from Pachmo OCP side is not being pursued, as it will require much larger external dumping space.																		
3.CCL to explore the possibility of reducing forest area required for O.B. Dump.	CCL in association with CMPDIL has reviewed the Mining Plan resulting in reduction of Area of External OB from 379.82 Ha to 313.52 Ha(i.e. reduction of 66.30 Ha of Land).																		
4. CCL should prepare the baseline data of drainage and silt deposit study of the entire mining lease area from year 0 and carry out the impact study at regular interval and prepare detailed catchment area treatment plan	CCL has proposed to study drainage and silt deposit study of entire Mining Lease of Kotre-Basantpur –Pachmo Coal Block by Central Water and Power Research Station, Pune, Department of Water Resources, River Development & Ganga Rejuvenation, Ministry of Jalshakti.																		
5. CCL should prepare mine closure plan along with progressive bio-reclamation plan of the entire mining lease.	CCL has already prepared a Mine Closure Plan encompassing rehabilitation process to restore physical, chemical and biological quality disturbed by the mining to a level acceptable to all concerned as part of the EIA/EMP Plan. CCL is also committed to open a Fixed Deposit Escrow Account with Coal Controller Organisation and shall submit Mine Closure Cost to CCO before the permission is given for opening of Mine. 6.As per land use plan post mining of Coal Block, 236.45 Ha of the land will be converted into water body. CCL was asked to explore the possibility of using this area of 236.45 Ha for internal OB dumping instead of converting this large area into water body and were directed to reclaim entire area after mine is closed.	As per the mining plan, in the post mining scenario, it has been proposed to backfill around 393.15 Ha of quarry with OB upto a top R.L of +480 m (90 above adjoining Ground Level). The Area of Water body is proposed to be reduced from 236.45 Ha to 209 Ha. A detailed presentation was made by the representative of M/s CCL on justification of locating KotreBasantpur-Pachmo OCP in Forest areas of Ramgarh and Bokaro Forest Division. The brief overview of the point mentioned by M/s CCL is as mentioned below:-

- KotreBasantpur-Pachmo OCP project is spread over an area of 1162.87 Ha (Ramgarh Division- 664.96 Ha, Bokaro Division - 497.94 Ha). The OCP has proven reserve of coking coal (washery grade) and is spread over an area of 6.75 Sq. Km in West Bokaro coal field.
- KotreBasantpur-Pachmo OCP is surround by CCL Parej coal mine in the east, CCL Kedla and CCL Jharkhand OCP in the South and metamorphic (Non coal bearing formation) in the north.
- Mining plan of KotreBasantpur-Pachmo OCP has been prepared by M/sCMPDI.
- Mining from KotreBasantpur-Pachmo OCP will be done from single pit in the entire lease area. Production will start from Ramgarh side i.e. KotreBasantpur area and then it will move to the Bokaro side i.e. Pachmo area.
- External dumping from OCP will start from year 1 of the production i.e. north- west side of the quarry and in pit dumping of will start from year 13 of the production.
- Over an entire period of production, the project will generate around 149.65 million tonnes of coal and 718.57 million cubic meters of dump. It was informed that about 30 ofOB needs to be dumped externally for which around 313.52 ha land will be required. At the end of production phase, it was informed that due to swell factor and final void, the height of dumping area from MSL will be around 480m and mine void converted into water body will cover an area of 236.45ha
- Land use pre-mining stage and Land use post mining was discussed

**Point Wise Reply to the Issues Raised by the PCCF at the Meeting Held on
11.02.2022**

Issues Raised in the MoM Dt. 11.02.2022	Reply to the Issues Raised
To reduce the final void to 40 m depth while further minimizing the final void area of 209 Ha. (As proposed in the presentation)	Post mining plan has been revised in such a way that the void area has been brought down from 209 Ha to 54.6 Ha. and void depth has been reduced to <40 m. Refer Annexure-I for Revised Dump Plan
Not to reduce the green belt due to re-handling of OB or backfilling	Green belt will not be affected due to re-handling of OB. Total green belt of 151.40 Ha. shall be maintained.
Terracing of OB Benches and vegetation with green grass by Geo-textiling	Geo-textiling/ Jute mats shall be provided on the slopes for facilitating grass. Slope shall be vegetated using species like Khus (Vetiveria Zizanioides), lemon grass (cymbopogon), Shishu (Delbargia Shishu) , Khair (Casia Katachu) etc.
To reduce the external dump to the minimum possible (Preferably in 2 decks upto 60 m)	The dump height has been revised and proposed to reduce the height of dump upto 60m in the post mining stage by re-handling of OB into mine void. Refer Annexure-I for Revised Dump Plan.

Proposal of preserving top soil, method of preserving and scheme of spreading top soil over the dumps was sought	It has been estimated that around 2.90 Mm³ top soil will be generated throughout the life of mine. It is proposed to store the top soil in a designated site away from mining operations and use it for bio reclamation of degraded mine area. Refer Annexure-II for the Top soil management Plan.

Annexure- II Top Soil Management Plan

Topsoil is that uppermost layer of soil capable of growing and supporting vegetation. Topsoil contains the essential micro-organisms, nutrients, organic matter, and physical characteristics necessary to grow and sustain permanent vegetation.

The salvaging, stockpiling and re-application of topsoil to be used as growth medium in the reclamation of dumps within the mining area is a major environment protection programme. Soil management in opencast mine is necessary to re-establish the stability & productivity of lands disturbed due to mining activity.

The total Top soil removal has been estimated as 2.91 Mm³ throughout the life of mine. The quantity of top soil removal stage wise and its use in the reclamation has been detailed in the table given below.

Year/Stage (Life of the mine plus post closure period)	Top Soil Removal Plan	Top Soil Used(in M.Cum)					
		Spreading Over Embankment	Spreading over Backfill area	Spreading over External OB Dump area	Used in Green Belt area	Used in land Dismantled	Total Utilised

It has been proposed to preserve the top soil on the land earmarked for top soil stockpiling.

The measures to be taken for handling, preserving and spreading of top soil

1. The top layer i.e., 0-30 cm of soil shall be treated as top soil.
2. Top soil removal shall be done separately using suitable HEMM/machines and not mixed with Overburden removal.
3. The max. height of Top soil dump shall not be maintained beyond 10 ft. from the ground R.L. proper terracing of dump shall be done.
4. Provision of jute mesh for facilitating grass or vegetative growth on slopes. Slope shall be vegetated using species like Khus (Vetiveria Zizanioides), lemon grass (cymbopogon), Shishu (Delbargia Shishu) , Khair (Casia Katachu) etc.

Meeting started with brief introduction of all the participants and PCCF asked representatives of CCL to explain the status of implementation of the points discussed on 8/10/2021.

A detailed power point presentation was made by Sri Jayant Chakraborty, Regional Director CMPDIL & Sri Rajiv Hui, Project Officer CCL. They explained the action plan for the points for which clarification was sought:

1. The possibility of dumping overburden in the adjoining mines of Kotre Basantpur-Pachmo OCP has been examined and the status is as follows:
 - Nearby OCPs Kedla & Jharkhand have more than 15 years of life and dumping of the OB from Kotre Basantpur-Pachmo OCP in these mines is not feasible.
 - Gose OCP will have a final void of about 100 Ha which will be used for dumping of OB from Gose East OCP.
 - Parej OCP will be completed in 5 yrs and only a small portion will be left as final void and will be used as water reservoir.
2. The possibility of starting mining from pachmo side was examined as instructed in the 8th October meeting. Upon conducting a study, it was derived that more area is required for external dumping in this scenario, keeping in view that internal dumping can only commence in the in 22nd year if mine were to start from Pachmo side.

3. CCL will be awarding the work to study drainage pattern and silt deposit study of the leasehold area to CWPRS Pune.
4. CCL has studied the possibility of reducing the external dump area and as per revised plan 313.52 Ha of area will be used for external dump instead of earlier proposed 379.82 Ha (the mining plan for which was approved by CCL board in the month of September, 2021)
5. CCL has proposed a mine closure plan that included back filling certain amount of OB. Thereby reducing the area of water body from 236.45 Ha to 209 Ha, and depth being brought down to 140m from the earlier 285m. Biological reclamation of 403 Ha against the earlier 420.4 Ha is proposed.
6. An escrow account will be opened with Coal Controller Kolkata by depositing an amount of 294.38 Cr. which will act as a security for the proposed mine closure plan.

After seeing presentation made by CMPDIL & CCL, PCCF cum ED Nodal expressed his concern over for proposing 313.54 Ha of forest area for external dumping and leaving 209 Ha of final void area at the end of the quarry operations and the depth of the void proposed 140 m. He also expressed concern for raising height of OB dump up to 90m which is likely to cause soil erosion due to rain cuts & deposition of OB soil in nearby fields & choking drainage system. If height is increased then more particulate matter will become air borne and this will further deteriorate ambient air quality of the area if proper measures are not taken.

Detailed discussion was held on the presentation made by CMPDIL & CCL and they were advised to rework on the following points & make necessary changes in the forest diversion proposal accordingly:

- To reduce the final void to 40 m depth while further minimizing the final void area of 209 Ha (proposed in the presentation)
- Not to reduce the green belt area due to rehandling of OB for back filling
- Terracing of the OB benches and vegetation with green grass by Geo textiling.
- To reduce the external dump to the minimum possible (preferably in two decks up to 60m).
- Proposal of preserving top soil, method of preserving and scheme of spreading top soil over the dumps was sought.

Conservator of Forest and both Divisional Forest Officers raised concern on amendment in their recommendation in Part-II & part-III. Once recommendations are made, they cannot

- That after addressing of above mentioned concerns by the project proponents, DFOs will send their comments in letter form along with all annexures.
- Details of meeting & their compliances by the project proponents & final recommendation shall be made in Part-V by the Nodal officer.
