**Subject:-**

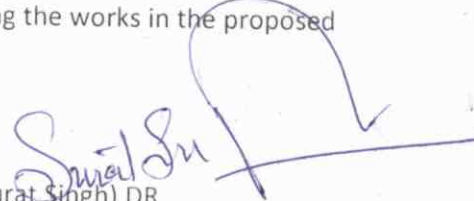

**Enumeration list of trees coming in the proposed transmission line 22 kv DC from Tangnoo Romai-II(6 MW)HEP Power House to Andhra Power House Switchyard.**

Memo:-

In continuation to the earlier corespondance regarding the enumeration of trees coming in the proposed transmission line 22 kv DC from Tangnoo Romai-II (6 MW) to Power House Andhra.

In this context, it is further submitted that, earlier the field staff of this Range have selected the **three routes** of the proposed transmission line. And after the careful consideration it has been assessed that, the transmission line will pass through the dense forests and will involve the heavy felling of the trees in the proposed transmission line .To avoid such a heavy involvement of trees, the one route has been identified, in which there is no need to fell the excess trees.

Hence keeping in view of the above foregoing, the **one route** with the least trees, have been final y indentified, in which 193 trees equal to volume 58.19m3 is the requirement of the Project authorities while executing the works in the proposed transmission line, *copy enclosed*
