

Detailed Note on Project

M/s. Rama Minerals, Tadipatri is a mineral Grinding and Pulvarising company having 15 years of experience in mineral business. We manufacture high quality Steatite, Dolomite, Barytes, and other Industrial minerals for Paper, Paints, Rubber and to other Soap Industries.

M/s. Rama Minerals is having two manufacturing units in the following places:

1. Nandalapadu Village, Tadipatri Mandal (25 Kms from proposed lease area).
2. Peddapodamala Village, Tadipatri Mandal (30 Kms from proposed lease area).

The proposals for grant of quarry lease over an extent of 2.03 Ha of Forest Land in Compartment No. 594/P of Mutchukota R.F., Julakalva Village, Singanamala Mandal belongs to Gooty Range, Anantapuramu Division and District. The mining activity in this area is carrying out from the past 80 years as per the records of Geological Survey of India. At present, adjacent to the proposed quarry lease, there are 5 existing quarry leases.

The high grade steatite available here is of very good quality and is not sufficiently available in the outside forest area. The existing quarries are not in a position to meet the market requirement and so there is a huge demand for high grade steatite in the market. So, the proposed quarry lease area 2.03 Ha is the barest minimum requirement of the lease. The access road to the proposed quarry lease area is an existing cart track used by Forest Department and existing quarry lease people for ingress and egress.

For M/s: Rama Minerals.
