

Recommendation:

The proposal is for improvement of the existing forest management road from SH-24 TO Gardega without any widening and the works include black topping and bituminous works using cold mix. The improvement of this road will be beneficial for the people of three villages in this locality and this will help to improve the socio-economic conditions of these villagers. Also there are no alternate routes through which a road can be developed to approach these villages-. In this case the barest minimum of forest land has been proposed for diversion and also this work will improve the efficiency of forest protection activities in this area. Hence the proposal is recommended for diversion.
