

SPECIFIC RECOMMENDATION OF KHODAHAR SUB-STATION 4.04 HA.

The proposed site measuring an area 4.04 Ha. in Khodahar P.F. , Thana Barhi, Thana No. 56 Plot no. 1445 for construction of sub-station was inspected on 10th. April, 2019. The terrain is undulating and is covered by vegetation predominantly Sal, Eucalyptus and Palas. The sub-station may be considered only if no alternate sites are available as it is not site specific. However, on inspection of the site it was found to be bare minimum requirement for the project. As the sub-station is proposed in forest area all necessary precautions should be taken to prevent **electrocution** / accidents of wild life in the area. The proposal may be considered as it would fulfil the energy requirements for the people living in the area. However, since it is a component of a larger liner project it would be advisable if the present proposal is treated in entirety.

**Divisional Forest Officer
Hazaribag West Division**
