

Inspection Note of DCF

The proposed site for making a new drain from Don gumati to Tinhipul was inspected on 12.07.2019. The area for diversion of forest land is 14.85 hectare. Total no. of trees found to be 166. The enumeration list is attached hereby. Meanwhile the government has issued direction regarding minimizing the number of trees to be felled. As this order was applicable to all the projects including old projects which were approved by the government in forest conservation cases also.

The user agency was asked to change the design/working for lessening the number of trees to be felled. During inspection it was decided to shift the working direction a little, to save the trees.

By this way fifty five numbers of trees were completely saved from felling, seventeen trees would be translocated so now the final figure of felling is 94 out of 166.

The area for diversion is barest minimum.

No violation of FC Act seen at the site.

I recommend the diversion of land at proposed site.
