

RECOMMENDATION REPORT

A proposal FP/AS/MIN/154403/2022 has been received for diversion of 3.92 Ha of forest land for non-forestry purpose under FC Act, 1980. The plinth areas measuring 0.8 ha each, are being recommended for diversion as the area has already been drilled earlier and has thin vegetation in the close vicinity. The road connecting to these wells is also being recommended as they are already present and is also used for patrolling by the forest department.

The plinth areas have been without any drilling interference for past few decades and therefore it is an active area for wildlife especially elephant herds. The recommendation is therefore subject to 'strict and non negotiable' condition that necessary biodiversity related scientific management interventions as directed by the forest department will be strictly implemented so as to cause minimal disturbance to the wildlife and to mitigate man animal conflict, since there is a forest village in the close vicinity, and to conserve biodiversity around the proposed area.

The above proposal submitted by OILMAX ENERGY PRIVATE LIMITED is therefore recommended as proposed by the user agency subject to the conditions mentioned above.
