

GEO-REFERENCED BOUNDARY MAP
(IN SHAPE FILE)
43.942 HA REVENUE FOREST LAND
KUSMUNDA OCM, KUSMUNDA AREA, SECL

1.0 Introduction

A noting sheet for doing DGPS survey of 47.964-hectare revenue forest land for initiating proposal for forestry clearance under Forest Conservation Act 1980 in respect of Kusmunda OCM has been received in CMPDIL along with a map showing forest land initiated by Nodal Officer (Forest & Environment) and duly forwarded by General Manager, Kusmunda Area, South Eastern Coalfields Limited (SECL) vide letter number SECL/CGM/KSM AREA/398 dated 22-11-2017. As per annual action plan for 2018-2019 (SECL/BSP/P&P/2018/ 1001 Dated 11-04-2018) DGPS survey of forest land is to be taken up by CMPDI.

After many interactions with colliery officials in many phases during the past few years, the revenue forest land to be diverted has been revised to 43.942 hectare and accordingly Kusmunda OCM authorities submitted a revised land schedule indicating village wise and khasra wise revenue forest land falling within the Kusmunda Expansion mine boundary.

The map provided by colliery authorities has been scanned and digitized in order to compare with the land schedule. After checking the revenue forest land details in the land schedule and corresponding digitized map it has been decided to conduct DGPS survey at selected ground locations identified and surveyed by colliery authorities.

DGPS survey had been conducted in these forest lands at salient points shown by project officials during the year 2018.

A DGPS report of revenue forest lands (Area-43.942 Ha) alongwith Mine lease Boundary has been submitted on March-2019.

This is to inform that SECL Kusmunda Area had applied for Diversion of 43.942 Ha Revenue forest lands vide application no. FP/CG/MIN/41604/2019 dated 18.10.2019. On scrutiny of the proposal, DFO Katghora has returned the application for correction in DGPS report & kml due to mismatch of total mine lease boundary area.

After that a proposal has been received in CMPDIL for revision in Mine Lease Boundary for correction in application for Stage-I forestry clearance of diversion proposal of 43.942 Ha revenue forest lands of SECL Kusmunda area (proposal no.FP/CG/MIN/41604/2019 dated 18.10.2019) by forwarded by General Manager, Kusmunda Area, South Eastern Coalfields Limited (SECL) vide letter number SECL/GM/KSM/22-23/270 dated 13.01.2023. Land use details with village wise break-up has been submitted by Kusmunda area, SECL vide mail dated 06.03.2023 & summary of the details has been incorporated in the geo-referenced boundary map.

Mine boundary has been prepared as per data provided by Kusmunda area, SECL.

A geo-referenced boundary map in 1:10000 scale and kml files are also enclosed.

Soft copies of all maps and shape files are given in CD for further necessary action by SECL. Relevant documents of the letters mentioned above are given as annexures in this report.

Details of revenue forest land falling within the mine lease boundary of Kusmunda OCM is tabulated below:

Table Showing Village Wise Details, 43.942 Ha Revenue Forest Land, Kusmunda OCM			
SL	Khasra	Village	Area (Ha)
1	1184	Gevra	1.166
2	1182P	Gevra	15.953

2.0 Background

Electricity is a very important commodity that cannot be dispensed for the modern lifestyle of people and communities worldwide. India, being a growing economy is not an exception. Electricity produced through thermal power stations meets about seventy percentage of total electricity requirement of our country. Coal plays a vital role in these thermal power stations. With growing concern for increasing power production, the thrust is on increasing production on coal producing companies, such as SECL.

Coal demand for other industrial and domestic consumption has also increased over the years. Coal producing companies, in general, are always required to mine more coal through open cast and underground coal mines in order to meet the coal demand by thermal power stations.

Coal producing companies are left with only two options. Either they should open new coal mines or increase the capacity of existing mines. While it is not very easy to open up new coal mines, the only option left is to expand the existing mines in terms of its capacity or in terms of physical extent of the existing mine.

In most of the mining lease hold areas it is observed that the coal bearing area is falling in forest areas that has been left out for want of forestry clearance. These forest lands are categorized into the following three types:

- Reserved Forest
- Protected Forest

➤ **Revenue Forest**

In order to carry out mining activities in these forest lands, forest clearance is required to obtain from Ministry of Environment & Forest and Climate Change (MOEFCC).

To check irrational exploitation of forest and to maintain the ecological balance, Forest Conservation Act (FRA), 1980 has been enacted. Under this act, no forest land can be used for non-forestry purpose without prior approval from the ministry.

For getting forest clearance from MOEFCC the coal producing companies are required to apply through recently updated web portal called “Pro Active and Responsive facilitation by Interactive and Virtuous Environmental Single Window Hub (PARIVESH)” which is a web based, role-based workflow application that has been developed for online submission and monitoring of proposals submitted by the proponents for seeking environment, forest, wildlife, and CRZ clearances from central state and district level authorities.

It automates the entire tracking of proposals which includes online submission of a new proposal, editing/updating the details of proposals and displays status of the proposals at each stage of the workflow.

The procedure for forest clearance envisaged under the act mandates a two-stage approval process consisting of two stages:

➤ **Stage I**

Upon prima facie review the proposal is either accepted or rejected. If approved, the project authority is required to deposit an amount for compensation of the opportunity cost of the forest (NPV, compensatory afforestation, additional expenses towards mitigating probable environmental damage etc.)

➤ **Stage II**

Following the deposit of above-mentioned costs, the land is handed over to project authorities provided they have obtained all other requisite clearances.

Reserve forest boundaries are generally marked on the ground with large forest pillars while the boundaries of protected forests are marked on the ground with trenches, fencing and other markings. However, the revenue forest boundaries are not clearly defined on the ground and details of these lands are normally not available with forest department. The details of these revenue forests are obtained from local state government land and revenue authorities.

As per the circular of MOEFCC, one of the pre-requisites for getting forestry clearance is a geo-referenced boundary map in shape file format of the desired forest land.

About 43.942-hectare forest land is falling in the mine boundary of Kusmunda OCM. Forest land diversion proposal has to be submitted in online portal along with geo-referenced boundary in shape file and kml file after DGPS survey.

3.0 Location

Kusmunda OCM is located in Kusmunda Area of SECL which is in Korba District, Chhattisgarh. Nearest townships are Korba and Bilaspur. Many major open cast coal mines such as Dipka, Gevra and Manikpur are located nearby. Revenue forests are located in Gevra, Khodri, Padaniya, Pali and Sonpuri villages. There are about 19 khasra plots whose total area is 43.942 hectare that are required to be diverted for mining activity.

4.0 Scope of Services

The scope of services of CMPDI is limited to providing geographical co-ordinates of forest boundary within the leasehold of Kusmunda OCM and submit shape file and kml file along with a geo-referenced map. SECL will provide surveyed coordinates or digitized map of the land to be diverted along with detailed land schedule indicating all relevant information regarding revenue forest land.

5.0 Methodology

Execution of the job was planned on the basis of plan of the area provided by the project officials. For the job, DGPS (Differential Global Positioning System) survey was found to be appropriate for determining geographical co-ordinates of forest boundary.

The Global Positioning System (GPS) is a satellite-based location, timing and navigation system in all weather conditions, anywhere on or near the Earth where there is an unobstructed line of sight to four or more GPS satellites.

The Global Positioning System is a system of communication made up of three independent aspects such as:

- GPS satellites orbiting the Earth;
- Control and monitoring stations on Earth;
- GPS receivers owned by users.

GPS satellites transmit the satellite's number, its position in space, and the exact time. This information is sent through the transmitted signals at regular intervals by all the satellites are all times.

These signals are picked up by various types of GPS receivers on ground. With signals from three or more satellites, a GPS receiver can triangulate its location on the ground (i.e., longitude and latitude) from the known position of the satellites. With four or more satellites, a GPS receiver can determine a 3D position (i.e., latitude, longitude, and elevation). Differential Global Positioning System (DGPS) refers to using two or more GPS receivers to achieve greater positional accuracy. There are three basic methods of doing DGPS survey.

- Static
- Rapid-Static
- Real-time Kinematic (RTK).

For doing DGPS survey of forest land, post-processed static survey is found to be most suitable where one GPS receiver is used as base station and other GPS receivers are used as rover stations. Base receiver is stationed at a point of known co-ordinates for longer duration and rover stations are kept at unknown stations for comparatively shorter duration. For forest land diversion, DGPS observation is done for two hours in each of the rover stations depending upon the time and availability.

Data from base and rovers are downloaded and then post-processed in GPS data processing software, LeicaGeoOffice 8.2 version, to achieve sub-centimeter level accuracies, especially in case of dual-frequency GPS receivers, which is in possession of CMPDI.

ArcGIS 10.2 version software is used for preparation of shape file, kml file and geo-referenced map of the forest land in WGS-84 co-ordinates. AUTOCAD software has been used extensively for digitizing and correcting map supplied by colliery authorities.

Large format map scanner available with CMPDIL has been used to accurately scan the map in digital format.

6.0 Survey Instrument

For providing geographical (spherical) co-ordinates of the stations along the boundary, Differential Global Positioning System (DGPS) consisting of one base receiver and a rover receiver were used.

CMPDIL has the latest hardware and software of Leica make DGPS instrument which has dual-frequency GPS signal receivers that provide accurate results after post processing in relevant software. Brief specifications of DGPS are provided in the table below.

Details of Leica DGPS Instrument		
A	DGPS Instrument:	
	Make	Leica
	Model	Viva
	Signal	GPS: L1, L2&L5 carrier, CA, L1P, L2P, L2C GLONASS: L1, L2&L5 carrier, L1CA, L2CA, L1P, L2P GALILEO: E2-L1-E1, E5, E6
	Channels	72
	Accuracy:	
	Post Processed Static DGPS	3mm +0.5ppm horizontal, 5mm + 0.5ppm vertical
	Real Time RTK	10mm + 1 ppm horizontal, 15mm + 1 ppm vertical
	Power:	
	Internal Battery	2 Li-Ion, 3900mAh, 7.2V
	Communication:	
	Bluetooth	Bluetooth standard 1.2
	USB	1.1 Version
B	DGPS Software	Inbuilt Leica software for data recording
		LeicaGeoOffice Version 8.3 for data processing
C	GPS Instrument	Stonex GPS Model S4H
D	GPS Software	Inbuilt Stonex Software for data recording
		GeoGIS Office Version 14.41 PLUS

7.0 Details of Field Activity

Reconnaissance survey was done after reaching the site prior to taking up actual static DGPS work. Officials from Kusmunda OCM were associated during reconnaissance and subsequent DGPS static observation work both at base and rover stations. Base GPS receiver has been stationed in Survey of India survey station located nearby. DGPS survey has been carried out in ground locations identified by colliery authorities as given in the following table.

Table Showing Details of DGPS Survey Points & Locations, Kusmunda OCM Observed Geographic Coordinates (WGS-84)			
STN	TYPE	LAT (DMS)	LONG (DMS)
RS30	Base	22° 21' 20.210 N	82° 35' 02.815 E
5	Rover	22° 19' 12.964 N	82° 41' 37.001 E
25	Rover	22° 19' 12.555 N	82° 41' 47.519 E

P6	GPS	22° 18' 16.961" N	82° 42' 20.638" E
P8	GPS	22° 19' 13.178" N	82° 41' 37.026" E
P9	GPS	22° 19' 12.600" N	82° 41' 47.585" E
P12	GPS	22° 19' 07.123" N	82° 40' 37.636" E
P13	GPS	22° 18' 34.874" N	82° 41' 19.728" E

8.0 Computation

Data recorded is downloaded from both rover and base receivers of DGPS and processed in Leica Geo-Office software to get post-processed WGS-84 co-ordinates. The co-ordinates of other boundary pillars / pegs are then transformed in ArcGIS to generate final boundary coordinates of all the points in WGS84.

9.0 Documents Submitted

- Drawing Number: CMPDI/RI5/BSP/GEOM/2023/DGPS/92
- Soft copy of shape files & kml files in CD.
