

Conservation Plan for Water Sources Bhaba Mud Road

As a first step for strategic planning to ensure that water sources are not contaminated and interrupted all the water sources and drains in the vicinity of the proposed road were inspected and inventory was prepared. Condition of these water sources, flow rates and potential contamination risks were evaluated. Assessment of the impact of the road construction and maintenance on these water features was done. Involving the community in implementation also serves an important public education function, and can greatly enhance the success of conservation programs. Following measures are proposed to be implemented to ensure that water sources are not contaminated and avoid interruption:

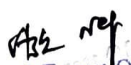

- Erosion control: Use vegetation, check dams, and other erosion control techniques to minimize sediment runoff into water bodies.
- Construction of culverts
 - Regularly clean and desilt storm water drains to ensure efficient water flow.
 - Repair damaged drains promptly.
- Promote awareness among road users and nearby communities about water conservation.
- Educate road workers about avoiding spills and pollutants near water bodies.

Financial Plan:

Sr. No	Location	RD	Type of Water Body	Proposed Conservation Activity	Cost Rs. In Lacs
1	Thingri	1/735	Nullah	C/o Retaining wall, breast wall and cause way	11.00
2	Homti Nullah	2/240	Nullah	C/o Retaining wall, breast wall and cause way	6.00
3	Chokha Panni	4/150	Spring	C/o of Bauri and Protectworks	17.00
4	Home Sut	5/00	Nullah	Retaining	7.00

				wall, breast wall	
5	Gyre	5/982		Retaining wall, breast wall	10.00
6	Ander	7/00		Retaining wall, breast wall	12.00
7	Cho Mulling	12/480		Retaining wall, breast wall	13.00
				Total Cost	76.00
