

**Full title of the Project:** Diversion of Forest Land for construction of Bhavali Pumped Storage Project (1500 MW) in Thane & Nasik Districts of Maharashtra State

**File No.:** FP/ MH/HYD/153240/2022

**Date of Proposal:** 06/03/2022

## APPENDIX (SEE RULE 6)

### FORM –‘A’

FORM FOR SEEKING PRIOR APPROVAL UNDER SECTION 2 OF  
THE VAN (SANRAKSHAN EVAM SAMVARDHAN) ADHINIYAM. 1980  
PROPOSAL BY THE STATE GOVERNMENTS AND OTHER AUTHORITIES

### PART-I

(TO BE FILLED UP BY THE USER AGENCY)

#### 1. PROJECT DETAILS:

- (i) Short narrative of the proposal and project/ scheme for which the Forest Land is required:

The Hydro Energy Storage Project is an established, proven and cost- effective technology for storing electricity at times of high generation and/ or low demand, which can then be released into peak demand projects. These projects have better reliability with no impact of change in fuel prices and no issues related to emission of fuel gases.

The JSW Energy PSP Two Limited, JSW Centre, Bandra Kurla Complex, Bandra East, Mumbai- 400 051, a Power Business arm of JSW Group- the largest independent Hydro- Power producer in India has taken initiative to construct a Pumped Storage Project of 1500 MW capacity in Thane & Nasik Districts of Maharashtra State.

The Government of Maharashtra has signed a Memorandum of Understanding (MoU) with the JSW Group, on 14<sup>th</sup> day of September, 2021, for facilitating setting up of a Hydro Energy Project in Thane & Nasik districts of Maharashtra State as per existing policy framework.

The project is proposed to be constructed on 275.00 Ha. of land, including 243.74 Ha. of Forest Land.

- (ii) Map showing required Forest Land, boundary of adjoining forest on a 1:50,000 scale map:

Annexed hereto with this proposal.

- (iii) Cost of the Project:

Approximately, an amount of Rs. 9058.09 Crores /-is likely to be spent upon the total project, including the part of project inside the Forest Land.

(iv) Justification for locating the Project in Forest Area:

The Pumped Storage Project is essentially a site-specific project because it requires a particular type of topographical and geological conditions. The sites of elevation variance are required to construct reservoirs of desired capacity. The reservoirs are critical for storing water for long duration. Reservoir location should compulsorily fulfil the geo-technical criteria needed for establishing the Pumped Storage Project. Since this project requires water as a means to store energy, the project has to be in close proximity of the water source.

For this project, initially, the proposed site was identified by the Government of Maharashtra. Having examined the site, based on topographical, geological, geo-technical and techno-economic feasibility parameters, the JSW Energy PSP Two Limited has confirmed 275.00 Ha. of land in Jamunde village of Igatpuri Tehsil of Nasik District and Kalbhonde, Kothale villages in Shahapur Tehsil of Thane District as most suitable site for the proposed project. The Government of Maharashtra has entered into an agreement with JSW Group by signing the Memorandum of Understanding for setting up of the said project in Jamunde village of Igatpuri Tehsil of Nasik District and Kalbhonde, Kothale villages in Shahapur Tehsil of Thane District.

The land proposed for the project necessarily involves Reserved Forests, Private (Deemed Reserved Forest) Forests, and Private lands Land. Since, the project is very "site specific", the Forest Land involved in the project cannot be avoided and no alternative can be substituted. Hence, the project is partly located in Forest Land. The barest minimum Forest Land, to the extent of 243.74 Ha., is required/ proposed for the project.

(v) Cost Benefit Analysis (To be enclosed):

The Cost-Benefit Analysis in the extant diversion proposal is worked out in accordance with the parameters prescribed by the Ministry of Environment, Forest & Climate Change, New Delhi.

The B/C Ratio of the project is as below:

| Total Benefit<br>(Rs. In Cr.) | Total Cost<br>(Rs. In Cr.)                                                             | B/C Ratio |
|-------------------------------|----------------------------------------------------------------------------------------|-----------|
| 90413.89                      | Cost of Forest Diversion: 74.056+<br>Standard Project Cost: 9058.09<br>Total: 9132.146 | 9.90: 1   |

A detailed report is annexed hereto with the proposal.

(vi) Employment likely to be generated:

The project likely to generate employment to Temporary/ Permanent (skilled/ Semi- Skilled/ unskilled) persons to the extent of 5000 Mandays during execution stage.

| Sr. No. | Type of Employment       | Permanent |          | Temporary |          |
|---------|--------------------------|-----------|----------|-----------|----------|
|         |                          | Direct    | Indirect | Direct    | Indirect |
| 1       | Skilled employment       | 225       | 0        | 1275      | 0        |
| 2       | Semi- Skilled employment | 150       | 0        | 850       | 0        |
| 3       | Un- Skilled employment   | 375       | 0        | 2125      | 0        |
| Total   |                          | 750       | 0        | 4250      | 0        |

Purpose-wise break-up of the total land required:

| Forest Division: Shahapur          |                                  |                                                                                                            |                  |                                     |                  |                     |                 |                              |
|------------------------------------|----------------------------------|------------------------------------------------------------------------------------------------------------|------------------|-------------------------------------|------------------|---------------------|-----------------|------------------------------|

2. Details of displacement of people due to the Project, if any:

- (i) No. of families: Please refer to note furnished herein below
- (ii) No. of Scheduled Caste/ Scheduled Tribes families: Please refer to note furnished herein below.
- (iii) Rehabilitation Plan (To be enclosed): Please refer to note furnished herein below.

Note: The project consists of construction of two dams & reservoirs. A survey & study of the people likely to be displaced/ affected by the project, is being carried out and the claims, if any, will be processed expeditiously in conformity with the policy of JSW Group or the National Rehabilitation and Resettlement Policy and applicable laws.

3. Whether clearance under Environment (Protection) Act, 1976 required? (Yes/ No):

Yes. Application is under process, vide File No.: J-12011/08/2022-IA. I (R)

4. Undertaking to bear the cost of raising and maintenance of Compensatory Afforestation and/ or Penal Compensatory Afforestation as well as cost for protection and regeneration of Safety Zone, etc. as per the scheme prepared by the State Government (Undertaking to be enclosed):

The necessary undertaking to bear the cost of raising and maintenance of CA and/ or Penal CA as well as the regeneration of Safety Zone, etc. as per Scheme prepared by the State Government is furnished to this effect and annexed hereto.

5. Details of Certificates/ documents enclosed as required under the instructions:

As per Check List.

State Sr. No. of the proposal:

(To be filled by Nodal Office with receipt)

**Full title of the Project:** Diversion of Forest Land for construction of Bhavali Pumped Storage Project (1500 MW) in Thane & Nasik Districts of Maharashtra State  
**File No.:** FP/ MH/HYD/153240/2022  
**Date of Proposal:** 06/03/2022

(Sr. No. 2 of Checklist)  
**JUSTIFICATION**  
**Of Site Specificity**

The Pumped Storage Project is essentially a “site-specific” project as it requires a particular type of topographical and geo- technical conditions with availability of water source at a close proximity to the identified project site. The sites of elevation variance are required to create upper & lower reservoirs of desired capacity. The reservoirs are critical for storing water for long duration. Their location should compulsorily be fulfilling the geo-technical criteria needed for establishing the Pumped Storage Project. Since this project requires water as a means to store energy, a techno-commercially viable water source, with sufficient capacity, to fill up the reservoir one time at the beginning of its operation and to supply for losses during its operation (mainly evaporation loss, quarterly or semi-annually or annually) has to be available in close proximity of project.

The proposed site has initially been identified by the Government of Maharashtra. Attempts were also made to explore the possibilities for alternate sites based on topographical, geological, geo-technical and techno-economic feasibility parameters. However, the JSW Energy PSP Two Limited has found proposed 275.00 Ha. of land, including Forest & Non-Forest, in Jamunde village of Igatpuri Tehsil of Nasik District and Kalbhonde, Kothale villages in Shahapur Tehsil of Thane District as most suitable site for the proposed project. The Government of Maharashtra has entered into an agreement by signing the Memorandum of Understanding for setting up of the extant project in Jamunde village of Igatpuri Tehsil of Nasik District and Kalbhonde, Kothale villages in Shahapur Tehsil of Thane District.

A detailed alternative study to find out the best optimized alignment of water conductor system on left bank of the upper reservoir along with other appurtenant structures was carried out. The location of powerhouse has also been selected based on the due consideration being given to topographical and Geological features. An attempt to optimize the orientation of PH on account of Geo- logical requirements viz-a-viz angle of deviation w.r.t. to the flow direction along the WCS has been done. The location of powerhouse is positioned in such way as to avoid the requirement of upstream surge shaft on the Headrace tunnel.

Underground power house is more suitable as compare to surface powerhouse. Therefore, the **following three “alternative layouts” of the project have been developed for techno economic comparison** and the pros and cons of all the alternatives are discussed below: -

**Alternative I:**

This alternative envisages the construction of following Major Components:

- ❖ Construction of Upper and lower dam of Height 47.0 m and 70.0 m respectively from the lowest natural surface level.
- ❖ Construction of Upper and Lower intake.
- ❖ one number of 11m dia water conductor system comprising of about 475.0 m long Head Race Tunnel (HRT) bifurcated into two penstocks of 7.7m dia of 647.107m length and each penstock is trifurcated into 3 branch penstocks of 4.0m dia and 135.32m long, 6 No's of each 5.0m TRT of length 90m is connected to the surge chamber in the downstream end in-turn connected to one number of tail race tunnel (TRT) of 11m dia and 808.75 m long.
- ❖ Downstream underground surge chamber on Tail Race Tunnel

- ❖ An underground power house and Transformer cavern, the arrangement of powerhouse is positioned under high cover zone of about 365m or more.

#### **Alternative II:**

This alternative envisages the construction of following Major Components:

Upper and Lower dam is similar to Alternative-1.

Construction of Upper intake, the location of lower intake is same as Alternative-1.

one number of 11m dia water conductor system would comprise of about 1605.302 m long Head race tunnel bifurcated into two numbers of 7.7m dia penstocks of length 169.90m in which each penstock intern trifurcated into small branch penstock of 4.0m dia and tail race tunnel (TRT) 358.52m long

Underground Powerhouse location is similar to Alternative-1 but positioned under optimized top cover to avoid problems related to high cover zone on the underground caverns.

#### **Alternative III:**

This alternative envisages the construction of following Major Components:

- ❖ Upper and Lower dam is similar to Alternative-1.
- ❖ Construction of Upper intake, the location of lower intake is same as Alternative-1.
- ❖ One number of HRT of 11m dia 653m long bifurcated into two numbers of 7.7m dia with a length of 1704.11m at the upstream surge chamber of 25m dia and each penstock is divided into branch penstock of 4.0 m dia and 76m long and tail race tunnel (TRT) 213.5m long.
- ❖ Surface Powerhouse location shifted downstream towards lower reservoir but involves deep surface cut

#### **Conclusion**

- ❖ Both the alternative for underground scheme has similar arrangement except minor changes in the length of various tunnels. In Alternative 2 the Power House location is located such that D/S Surge Chamber get eliminated. The overall impact is reduction in the overall cost. Hence Alternative-2 has been selected for the further studies as compare to Alternative-1.
- ❖ Also, based on Techno-Economic comparison of all the alternatives, Alternative-2 has less Levellised Tariff as compared to Alternative-1 & 3.

Hence, considering Techno-Economic Parameter underground power house with Alternative-2 is chosen for the development of the proposed PSP.

The above layout was received by the CEA/ CWC and further modification in Water Conductor System was suggested; like, instead as one HRT and Pressure Shaft, three HRT(s) & PS(s) were suggested. Accordingly, further layout was optimized and details of the same are given in the Salient Features mentioned in this note.

The proposed site involves 243.74 Ha. of Forest Land and 31.08 Ha. of Non- Forest Land. Attempts have been made to minimize the use of Forest Land for the project. However, the Forest Land cannot be avoided or no alternative can be substituted. The Forest Land proposed for diversion is, thus, unavoidable. The barest minimum Forest Land, to the extent of 243.74 Ha., is proposed to be diverted in the extant proposal.

**Full title of the Project:** Diversion of Forest Land for construction of Bhavali Pumped Storage Project (1500 MW) in Thane & Nasik Districts of Maharashtra State  
**File No.:** FP/ MH/HYD/153240/2022  
**Date of Proposal:** 06/03/2022

(Sr. No. 4 of Checklist)

### ATTEMPTS TO FIND OUT NON-FOREST LAND

The Pumped Storage Project is essentially a site-specific project because it requires a particular type of topographical/ geological conditions and such site needs to be tested on geo-technical and techno- economic parameters.

The land parcel, including Forest & non- Forest Land, having total area of 275.00 Ha. of land in Jamunde village of Igatpuri Tehsil of Nasik District and Kalbhonde, Kothale villages in Shahapur Tehsil of Thane District, initially identified by the Government of Maharashtra, which subsequently was subsequently found suitable based on topographical, geological, geo-technical and techno-economic feasibility parameters has been considered for setting up of the project at the proposed site.

Attempts have been made to identify the non- forest land for alternative layouts. However, no suitable alternate non- forest land is available for the project. The proposed layout, which involves minimum Forest Land, is found to be suitable for the project.

**Full title of the Project:** Diversion of Forest Land for construction of Bhavali Pumped Storage Project (1500 MW) in Thane & Nasik Districts of Maharashtra State

**File No.:** FP/ MH/HYD/153240/2022

**Date of Proposal:** 06/03/2022

(Sr. No. 10 of Checklist)

## COST BENEFIT ANALYSIS

### COST BENEFIT ANALYSIS FOR BHAVALI PUMPED STORAGE PROJECT

**Name of Project:**

Bhavali Pumped Storage Project (1500 MW), Maharashtra State

**Project Proponent:**

JSW Energy PSP Two Limited, Mumbai

**Area of the Project:**

The proposal involves surface as well as underground components. The certain Surface Components have overlaps with other Surface Components. Similarly, few underground Components have overlaps with other Underground Components. The certain Underground Components also have overlaps with the Surface Components. An analysis of an effective area involved in the proposal has been carried out and shown in the table annexed hereto as Annexure- I.

About 275.00 Ha. (Includes 243.74 Ha. Forest Land) in Igatpuri & Shahapur Tehsils of Nasik & Thane Districts, respectively.

**Cost of the Project:**

Rs. 9058.09 Cr.

**Expected Project Life:**

50 Years

**Computations for Net Present Value (NPV) of Forest Land proposed for diversion:**

| 2 | Benefits to economy due to the specific project      | The Incremental Economic Benefit in monetary terms due to the activities attributed to the specific project. | <p>Power is among the most critical components of infrastructure development; crucial for the economic growth and welfare of developing nations like India. The existence and development of adequate infrastructure is essential for sustained growth of the economy. Investment in hydel project, which produces the cheapest, cleanest and environment friendly energy, brings in several benefits to Agriculture, Industry, commerce, health, education, environment, etc sectors. The Incremental Economic Benefits, in monetary terms, due to the activities attributed to this project are hereby worked out on the basis of statistics published by the RBI &amp; World Bank for India for FY 2019-20. The details are furnished below:</p> <ol style="list-style-type: none"> <li>Gross Investment Rate of India (GIR)= 27.3%</li> <li>Growth Rate of India, which is GDP= 8.68% which</li> </ol> <p>Therefore, the ICOR= GIR/ GDP<br/>= 27.3/ 8.68 = 3.14</p> <p>The Increment to Output would be:<br/>= Investment/ ICOR<br/>= 9050 Cr./ 3.14= 2882.17 Cr.</p> | 2882.17     |
| 3 | No. of population benefited due to specific project. | As per the detailed Project Report.                                                                          | <p>The project falls within territorial limits of Kothale, Kalbhonde &amp; Jamunde villages. The all villages having total population of 2819 (2011 Census Data) The Work Profile of these villages is as under:</p> <p>About 1619 workers engaged in Main Work (Employment or Earning more than 6 Months), 429 were cultivators (Marginal activity providing livelihood for less than 6 months-owner or co-owner) while 330 were Agricultural labourer.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 2819 + nos. |

|   |                                                                            |                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                          |
