

Description of growing stock:  
(Including Density, Quality,  
Regeneration, Under growth,  
Special treatment and Past  
history)

The forest came into existence as LPF vide H.P.Govt.notification No. *Fts-15-53/79* Dated *19-5-80* and is being included in the Working plan for the first time. So nothing is known about its past history except that exercise of rights like grazing/lopping continued. *It was published in Rajpatra on 13-6-81*

With a view to increase fuel/fodder resources of the area and to intensify forest management it is divided into two compartment. This compartment C-1 is a shrub <sup>*area*</sup> ~~Other shrubs too are also present.~~ These include Prinsepia, Desmodium etc. Trees are rare and litsia is main constituent along nala and rare *Q* Quercus incana above. The compartment can be classified as 12/C1/DS2.

Due to grazing pressure/legal limitation it is allotted to the Protection W.C.

State of boundaries is poor but compartment can be located by help of details of private land holdings (attached) and revenue map available in settlement file.
