

JUSTIFICATION FOR LOCATING THE PROJECT IN FOREST LAND

The approach road to the Survey No; 86 of Veerapuram village was in existence for more than thirty years in the forest land which was forgone earlier. The above land was identified as forest land by us and helped the forest department to recover the forgone reserve forest area of about 0.755 Ha.

Now we are applying for the regularization of the above approach road a mere 0.288 ha out of total foregone land of 0.755 under forest (conservation) act 1980.

A company manufacturing speakers and other related accessories was functioning in the part and parcel of the land referred above from the year 1987. The above company is financed by Tamilnadu government financing institute, State Industries Promotion corporation Tamilnadu (SIPCOT) in the year 1987 and the unit was functioning till 1994. The unit went sick and could not repay the loans to SIPCOT. The unit was taken over and public auctioned by SIPCOT in the year 2002.

Thus a road has been in existence through which, the company has the ingress and egress including the movement of vehicle to transport the company products and company workers. A copy of the panchayat license for constructing the company building in the year 1987 is attached as a proof.

There is no possibility for the functioning of the erstwhile company without the present approach road. There is no other approach road to this land. The user agency has stopped using the approach road as soon as it was identified as forest land and applied for regularization of the above road.

Since the operation of the factory was closed due to no approach road the building was depleted and deserted completely. The forest authority advised not to use the road until the permission is obtained under forest (conservation) act 1980. We abide the advice of the authorities and the road is now not utilized and waiting for the permission of the authorities. The above area was used as approach road for the last 30 years and hence there are no trees or shrubs.

(Signature) 5/5/15

The road is concurrent and along the boundary walls of the huge industry B.A.S.F and edge of Thirutheri reserve forest, and joining the road already leased out forest land. There are many engineering companies, Software companies and residential buildings in this area and hence by permitting the very minimal area for our land will not no way affect the ecology or Bio diversity of the forest.

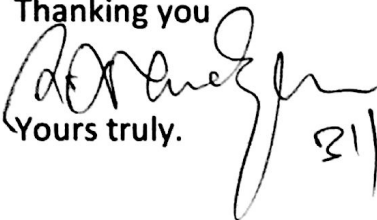

We are willing to give compensatory land of double the area in edamache reserve forest in the same forest division and hence in fact, a land with less than 0.4 % shrub is diverted on record and in place double the area with good forest/tree cover will be develop in the same division.

We are planning to construct houses for the employees of Mahindra world city workers in the above area. Which will be immense benefit for the working people in and around.

It is submitted that access to the road is access to life itself.

Thanking you

Yours truly.
