24 (b)	Estimated reserve of each mineral /ore in forest and non-forest area.	Pachwara South Coal block occupies the southernmost part of the Pachwara Coalfield administratively falling under Dumka District, Jharkhand. The volume of coal reserves has been calculated by volumetric method by using the relevant module of GEOVIA Minex 6.3 Software. Effective thickness grids have been generated with 100% boreholes while GCV grids are generated from the coring boreholes. Computed GCV values were used for the boreholes where BB analysis reports were available but SOV not determined. Extents of each seam are limited to their projected boundaries following 50% influence zone. The total thickness of coal has been prepared through Seam Model Operation module of Minex software. Estimation of reserves is restricted up to the workable limits of the seams. The workable limits of the thickness have been taken as 0.50 m as the property is being considered as opencast for the seams under this exploration program. A method has been adopted for preparation of total Coal by adding the isochores of all seams through Seam Model Operations Module (Total Thickness) in Minex. This Total OB contours has been prepared by deducting the Total Coal grid from depth contour/ iso-excavation plan of bottom most seam of the block. Cut-off Ratio lines has been prepared by Grid Arithmetic (division) from the above prepared two grids. All the relative density value has been taken for reserve estimation respect to the GCV range as per the defined procedure in ISP 2017. The coal reserve under the forest area is 201.57 million tonnes and Reserve under other areas is 171.95 million tonnes based on the land schedule approved by the Circle Officer, Gopikander. JUSTIFICATION NOTE FOR THE PROJECT

Pachwara South Coal Block is the southernmost part of the Pachwara Coalfield in Dumka District, Jharkhand. Pachwara-Chirudih Sector lies in the western part of Pachwara basin. The Block is allotted to M/s Neyveli Uttar Pradesh Power Ltd. (NUPPL), a joint venture of NLC India Limited and Uttar Pradesh Rajya Vidyut Utpadan Nigam Limited vide, allotment order no 13016/26/2004-CA-I/CA-III(Pt) (Vol.II), Dated 03.10.2016 from MoC, GOI.

Detail exploration is undertaken at Pachwara South Coal Block and Geological Report is already approved by the Ministry of Coal (MoC) vide letter no-CA1-13016/1/2017-CA1 (FTS:333272) dated 7th Sep'2020 (Annexure-1). Established gross Geological reserve of the block is 415.02 Million Tonne and net geological Reserve is 373.52 million tonnes (considering cut off as 0.5m). As per the estimation, around 201.57 Million Tonne of net geological reserve is lies under the forest land. Mining plan and mine closure plan is also approved by MoC vide No-34011/2/2020-MPSON 11.11.2020. Terms of Reference (TOR) granted by MoEF & CC to Pachwara South Coal block vide file no-IA-J-11015/18/2020-IA-II (M) on 05.11.2020.

As per the authenticated land schedule received from the CO-Gopikander, the project area is 714.8553 Ha. out of which forest area is comes to 398.3243 Ha and remaining area falls under non forest category. Thus, Forest Diversion proposal for 398.3243 Ha. of forest land is submitted as per the FC Act' 1980 vide online proposal no- FP/JH/MIN/59823/2020. However, while processing of the forest diversion proposal, necessary modifications have been made in the land schedule by Forest Department and subsequently a certified land schedule has been issued by DFO, Dumka on 2nd Feb 2022, whereas forest area comes to 455.1108 Ha. instead of 398.3243 Ha. The forest and non-forest land of the project is distributed in three villages namely Chirudih, Kundapahari and Mahuldabar. Distribution of forest land is furnished in the following table:

PACHWARA SOUTH COAL MINE PROJECT (IN HA.)				
VILLAGE NAME	CHIRUDIH	KUNDAPAHARI	MAHULDABAR	TOTAL (IN HA.)
FOREST AREA	107.7366	232.3204	115.0538	455.1108
NON-FOREST AREA	98.5888	143.3267	17.829	259.7445
TOTAL	206.3254	375.6471	132.8828	714.8553

Under the forest land of Pachwara South Coal Block, net geological coal reserve is estimated as 201.57 MT, which will be the major gain to the state government in terms of power generation and utility. If the coal reserve under the forest area is left out, mining is not possible only in non-forest land and not only the project will be unviable but also it will be a loss of national wealth to great extent. It is submitted that forest can be created on alternative land, but coal deposit is natural and can't be created elsewhere.

Beside these, benefit to economy due to this specific project will be around 18530.21 Crore.

The national economy will gain to the extent of Rs. 3340.25 crores by the way of wages payable to about 1288 numbers of permanent employees for 38 year. And it is expected that around 3000 persons will get indirect employment from this project.

Coal from this project is linked to Ghatampur Thermal Power Plant, Coal based Thermal Power Plant with a capacity of 1980 MW (3 X 660 MW) at Ghatampur Tehsil in Kanpur Nagar District, Uttar Pradesh.

There is huge demand of coal in India for Power generation and other utility. Thus, wining of coal below the forest land of Pachwara South Coal Block is highly essential.

The total forest land in this project is about 397.39 Ha and is to be returned to the concerned Government authority at the end of the mine life. The distribution of the forest lands are as follows:

1. 339.45 ha – Backfilled dump and shall be covered under Plantation.
2. 6.53 ha – the top soil dump will be covered under plantation.
3. 6.50 ha – the part of the safety zone- shall be utilized for plantation.
4. 44.91 ha – as a part of the last phase of mine and shall be utilized for water body creation.

At the end of the closure period, total 708.53 ha of land will be biologically reclaimed.

8.2	Post Closure Water Quality management:	The proposed mining area is not dissecting any natural streams. The storm water and ground water intersected during the mining operation will be the source of water accumulation within the active mining pit. Accumulated mine pit water during the active mining period will be pumped while post mining operation, there will be accumulated water in the left out voids. An area of about 75.23 ha of land will be converted to water body at the end of mine life. This area can't not backfilled, however will technically reclaimed by converting into water body. In post closure phase the water accumulated in the lagoon shall be quarterly sampled and analysed to monitor development of any acidity or toxicity in the accumulated water. As post mine period, most of the broken areas will be backfilled and left out water bodies will be much less, development of toxic water is not anticipated. The accumulated water will be utilised for the local community for agriculture and other usage. Regular monitoring of the water quality will be carried out as per the CPCB norms. Once the mine is closed, outside water shall be prevented to enter into the mined out pits which in turn will reduce the TDS and other solvents. The pit water will be utilized for agricultural use, supply as drinking water after treatment, and for pisciculture. Water quality analysis shall be carried out as per CPCB guidelines 2009.
8.3	Post Closure Air Quality Management:	The post closure activities will be restricted to limited operation only in the following areas: 1. Dismantling of temporary infrastructures. 2. Dismantling of conveyor systems. 3. Dismantling of electrical infrastructures. 4. Regular maintenance works in the dumping ground. 5. Regular maintenance job in the embankment. 6. Post plantation care.

8.6	Management of Coal Rejects.			Since the project doesn't envisage any washery, generation of rejects are not associated.						
8.7	Restoration of Land used for Infrastructure			All infrastructures will be dismantled excluding the office, VT Center and Canteen which will be handed over to the state government. The details of the infrastructure to be retained and to be dismantled are furnished in Table No. 5.1.						

8.8	Disposal of Mining Machinery	Mining machineries are to be deployed by MDO. They will be taking out the machineries at the end of mine life and will utilized in their other projects. Scrapped machinery's will be auctioned to the authorized agencies.																																					
8.9	Safety & Security	• Thorough inspection of the mine and OB dump areas for assessing the left over closure jobs of already reclaimed internal dump areas. • Inspection of infrastructure and water body areas for their safe reclamation and abatement of any leftover dangers. • Action required making drainage and any fire areas safe for future period. • Making 2 meter high fencing wall against excavated void area to prevent inadvertent entry as per requirement. • Making safe approach road from surface to left out pit bottom for future uses, as void becomes a water body. • Completing the survey of total reclaimed areas like mined areas, internal dumps, mine faces, quarry fencing and other areas to complete and update the Mine Plans under Coal Mine Regulation.

Reserve Status under Forest and Non-Forest area of
Pachwara South Coal Block

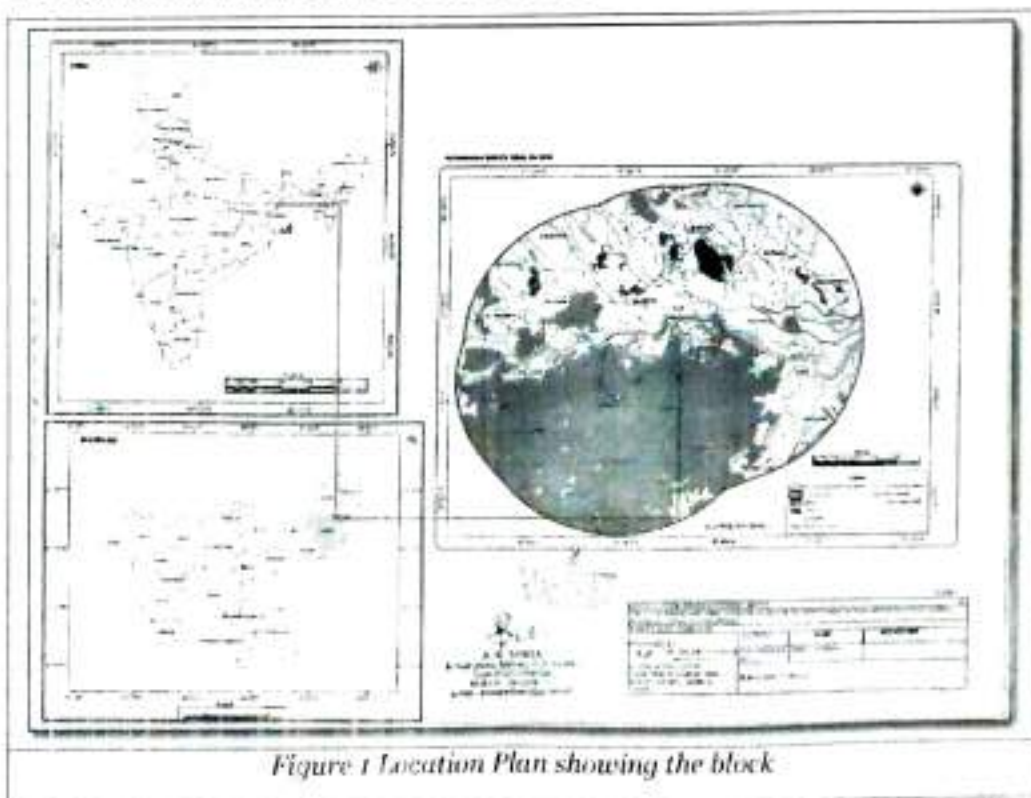

Introduction:

Pachwara South Coal block occupies the southernmost part of the Pachwara Coalfield administratively falling under Dumka District, Jharkhand. The limiting Co-ordinates of the block area fall in Survey of India Toposheet Nos. G 45 V6 & G 45 V7. The block is bounded by:

Latitude: $24^{\circ} 29' 57.404''$ N- $24^{\circ} 31' 46.956''$ N
 (WGS 84 45 R 2709584.08 N - 2712965.123 N).

Longitude: $87^{\circ} 27' 22.010''$ E- $87^{\circ} 29' 56.150''$ E
 (WGS 84 45 R 546208.62 E- 550540.973 E).

Amrapara is the nearest semi-urban area and well connected with both Dumka and Pakur (district headquarter) through black topped Dumka-Shahibganj Road and Amrapara-Maheshpur-Pakur road respectively.

Forest Land details and Reserves:

The block area consists of Forest occupying 398.4234 Ha of land out of a total of 714.8553 Ha. Remaining 316.5310 Ha is non-forest.

The coal reserve under the forest area is: 174.43 million tonnes

Reserve under other areas: 199.09 million tonnes

Total: 373.52 million tonnes

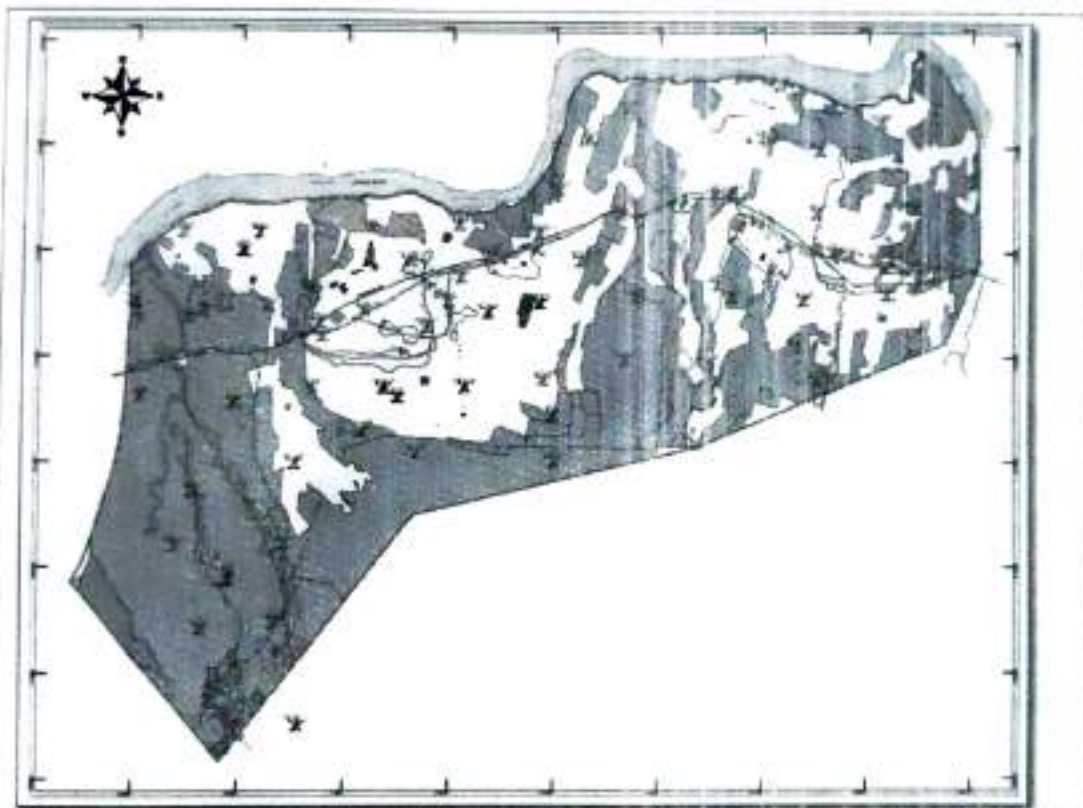

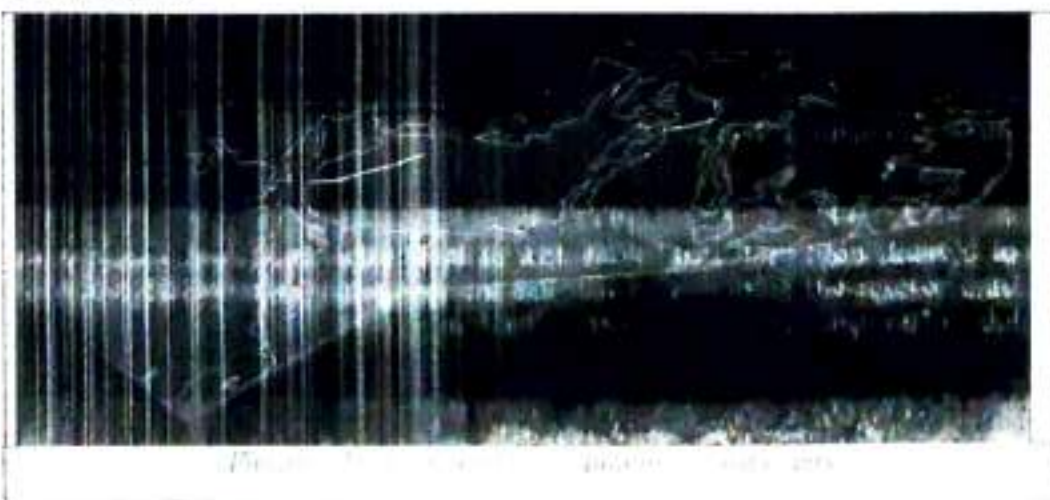

Figure 2 Plan showing forest covered plots in the Block area

Methodology used to determine reserve

The volume of coal reserves has been calculated by volumetric method by using the relevant module of GEOVIA Minex 6.3 Software. Effective thickness grids have been generated with 100% boreholes while GCV grids are generated from the coring boreholes. Computed GCV values were used for the boreholes where BB analysis reports were available but SOV not determined. Extents of each seam is limited to their projected boundaries following 50% influence zone. The total thickness of coal has been prepared through Seam Model Operation module of Minex software. Estimation of reserves is restricted up to the workable limits of the seams. The workable limits of the thickness have been taken as 0.50 m as the property is being considered as opencast for the seams under this exploration program. A method has been adopted for preparation of total Coal by adding the isochores of all seams through Seam Model Operations Module (Total Thickness) in Minex. This Total OB contours has been prepared by deducting the Total Coal grid from depth contour/ iso-excavation plan of bottom most seam of the block. Cut-off Ratio lines has been prepared by Grid Arithmetic (division) from the above prepared two grids. All the relative density value has been taken for reserve estimation respect to the GCV range as per the defined procedure in ISP 2017.

A Reserve has been estimated from the relevant grids generated through Geovia Minex (Version-6.3). Grids were generated with "General Purpose Gridding" with 25 x 25 mesh sizes. Data boundary is restricted to 200 m. Grids of effective thicknesses of each seam, GCV grids and RD grids were utilized for estimation of Coal Reserves. Each seam was limited to their projected extents and masked before utilized for Reserve estimation. Once all the masked grids were generated, seam wise reserves were estimated through "Detail Reserve Estimation" module of Geovia Minex (Version-6.3).

In a similar way, boundaries of plots with forest area have been inserted in the software. The reserves estimated, are calculated by limiting the reserve upto the boundaries of these forest plots, under the "Detail Reserve Estimation" module of Geovia Minex.

The above picture shows the forest areas inserted in the Minex software for calculation of reserve under these areas. The red grid shows the floor of seam IB and the green line is indicating the block boundary. The yellow lines are showing the forest covered plots.
