1. Introduction and Background

1.1 Background

The Ministry of Road, Transport & Highways (MRD) Government of India vide Job No-CRF-2017-18-CG 57 to 63 gave technical and financial sanction to the project for strengthening and widening of Raigarh-Hamirpur road in Raigarh District of Chhattisgarh.

The MRD sanctioned the project to Public Works Department, Govt. of Chhattisgarh under the Central Road Fund (State Roads) Rules, 2014. The government of Chhattisgarh is to implement the project of "Widening & Strengthening of Raigarh Hamirpur road of approx. length 23.20 km".

As per the guideline given by Govt. of Chhattisgarh to Public Works department (CGPWD), the office of Executive Engineer PWD division Raigarh, Dist. Raigarh is to implement the project.

1.2 Introduction

The existing Raigarh-Hamirpur road is an old road initially constructed prior to year 1980. The existing road contains forest patches, which the Chhattisgarh PWD proposes to use for non-forest use.

The Raigarh-Hamirpur road falls under the Raigarh Forest division. The DGPS Survey is proposed to carry out to estimate the forest and non-forest area along the entire road corridor from Raigarh to Hamirpur.

The CG PWD proposes to apply for Forest clearance from Ministry of Environment, Forest & Climate Change (MoEF&CC) for the entire route of approx. 23.20 km. The proposed road contains Reserve Forest, Protected Forest and Revenue forest patches along the route.

Ministry of Environment and Forests, Govt. of India vide their circular No.F.No.-11-9/98-FC, dated 08-07-2011 have stipulated that to ensure accurate delineation of forest area proposed to be diverted for non-forestry purposes under Section-2 of Forest Conservation Act, 1980 the diversion proposal under Forest Conservation Act shall be accompanied by DGPS/ETS surveyed reports of the forest land proposed for

diversion as per guidelines laid down in the circular issued by ministry of forest and environment, Government of India from time to time.

While submitting proposal for diversion of forest land for non-forest purpose, the user agency has to submit the Georeferenced boundary, using DGPS in shape file containing maps along with hard copy authenticated by Divisional Forest Officer (DFO) concerned.

The conventional methods of survey to delineate and demarcate the forest land with reference to the earlier Cadastral/Forest Compartment/compartment base map are time consuming. Further, the conventional **surveys are "Unprojected" Surveys**, hence linking them to geospatial domain is a challenging task.

The modern survey technique using Differential Global Positioning System (DGPS) with Georeferenced high resolution satellite image bring efficacy in survey in shorter time span compared to old method of survey and record preparation. High-resolution space-borne remote sensing image data show a high level of detail and provide many opportunities to be used as base for Cadastral/Forest Compartment map generation. The combination of GIS and GPS activities play a crucial role in developing the survey of the forest boundary points and making forest Cadastral/Forest Compartment maps. Area, length other measures in the GIS numerical database are considerably easy to compute and correlate with already available data with line department.

Geotrax is empaneled for DGPS Survey and mapping by Chhattisgarh Council of Science and Technology (CGCOST), Raipur, Chhattisgarh and also empaneled by Ministry of Rural Development, Department of Land Resources, Govt. of India.

1.3 Location of Raigarh-Hamirpur Road

The Raigarh-Hamirpur Road falls in two Tehsils of Raigarh District. The passes through various villages in Raigarh and Tamnar Tehsils. The approximate length of road is 23.20 km. The road starts from outskirts of Raigarh municipality and follows North-East direction towards Hamirpur village, which is close to Odisha state border. The Raigarh-Hamirpur road can be seen in the Survey of India Toposheet No. 64

O/5, 64 N/8, and 64 N/12. The road is bounded by Latitude $21^{\circ}54'38.76''$ N to $22^{\circ}02'10.50''$ N and Longitude $83^{\circ}25'46.20''$ E to $83^{\circ}30'14.96''$ E.

4.6 DGPS Survey Procedure

Geotrax started the DGPS Survey using the above mentioned CMPDI Base station control points. The coordinate of the Base Station is as follows:

Point ID	Latitude (d:m:s)	Longitude (d:m:s)	Ellipsoidal Height(m)
INC1	22°10'36.84758N	83 31'33.94548E °	NA

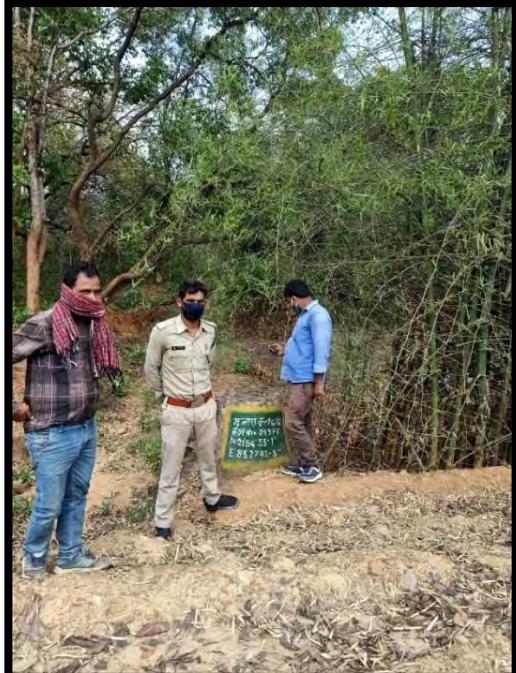

Fig-3: Images showing CMPDI Base Station

DGPS survey was carried out using a pair of DGPS instrument. One DGPS Instrument was used as Base Station (INC1). With reference to Base station other TBM are established which are spread out through-out the Raigarh-Hamirpur Road corridor. The forest pillar coordinates are collected with reference to TBM base stations. The distance between the TBM Base Station and rover was always less than 5km.

The survey was conducted in Real Time Kinematic (RTK) mode. The Survey team collected DGPS coordinates of road corridor @ 50m interval & at every turn and bends of the road. At each section the coordinates were taken at left corridor, centerline and right corridor.

4.7 Forest Compartment Pillar Photographs taken during DGPS Survey

4.8 Creation of Road Corridor Right of way boundary map

The road corridor right of way coordinates, forest pillars etc., surveyed points captured through DGPS were plotted in the GIS Software and the road corridor left, centerline, and right corridor boundary line was created by joining the surveyed points. A single polygon is hence created from the left and right corridor centerline.

The length of the surveyed road is approximately 23.20 km, the maximum width of the road in the total corridor is around 17 meters, and the minimum width of the road is around 9 meters.

Road chainage points are created starting from Raigarh START location and ending at Hamirpur. The chainage points are labeled, and shown in the map layout.

The Forest pillars are also plotted on the geo-referenced map road corridor map. Using the Geo-referenced forest stock maps the forest compartment boundary of the intersecting forest compartment is digitized.

The forest map and Survey of India map are geo-referenced to the WGS 84 datum and UTM Projection system. The village maps are also geo-referenced and mosaicked to the same datum (WGS 84) and UTM Projection system (UTM Zone 44N).

The Cadastral map is geo-referenced and all khasras that intersect the road corridor are digitized. Each khsara type (Private/Govt.) is identified from the revenue records available with patwari and Bhu-Abhilekh records in the collectorate. The B1/PII records of the revenue forest khasras is downloaded from the CG Bhunaksha portal. The khasra patch intersecting the road polygon clipped and its area is computed.

After digitization and some editing of the boundary of the revenue Khasra, a village wise land schedule showing the total private land, and total Govt. land including the revenue forest is prepared.

Similarly, the forest compartment area intersecting the road corridor and proposed for forest diversion is computed.

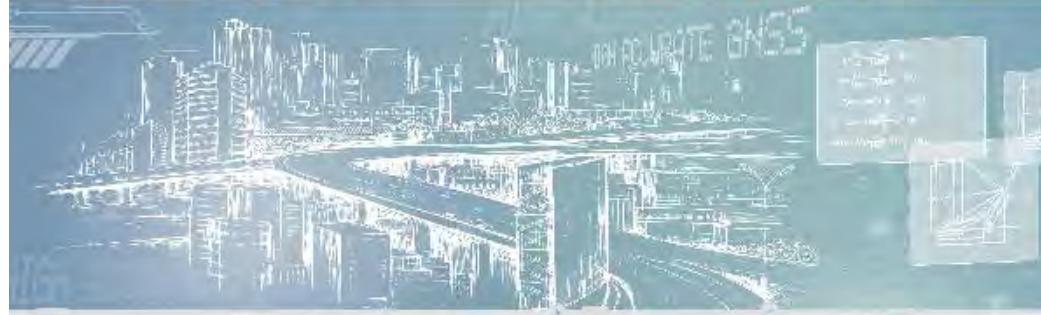

The forest compartment boundary layer and revenue forest Khasra layer is superimposed on survey of India Map and Forest stock map.

4.9 Specification of DGPS Equipment

Geotrax deployed the most advance and hi-precision devices to carry out the DGPS survey. The DGPS performance specifications are given below. The corresponding fact sheets are placed below for ready reference.

ComNav T300 GNSS Receiver

Features

- Ultra small
- Super light
- Many user-friendly conveniences built in
- GPS L1/L2/L5, BeiDou B1/B2/B3, GLONASS L1/L2
- Low power consumption
- Support long baseline E-RTK

RTK robust enough for challenging environments, in a device that is light and easy to carry

With decades of experience in the surveying GNSS receiver, the T300 is a product which combines lots of market proved advantages together. It can track all the working GNSS constellations. By using ComNav's unique QUANT™ algorithm technology, it can function in RTK mode with all the GNSS constellations or by using any single GNSS constellation such as GLONASS or BeiDou. The strong anti-interference ability of the receiver makes it possible to work in any environment.

Design driven to improve user experience

Our R&D people are always thinking about how to improve the physical experience of users and workflow in the field. With this in mind, the T300 integrates a cutting edge GNSS board, Bluetooth®, UHF (Rx&Tx) into a compact board. Smart design makes the T300 the lightest and smallest (volume) receiver in the world.

Hot swap battery design

Extending the field working time is also a passion for our R&D people. They do lots of tests and analysis to reduce the power consumption, and make the whole system work more efficiently. In parallel, they've designed in the capability to hot swap the battery source. When the warning sounds and LED flashes, put your second battery in place. Then recharge the first while you keep working.

Consumer grade batteries... always available

Losing power in the field is significantly inconvenient for users, as the batteries for GNSS receivers are often unusual types and not readily available. Once again our R&D people developed a solution so that the T300 runs on normal consumer batteries.
