

DETAILED COMPREHENSIVE MUCK DISPOSAL PLAN

PROJECT : Nallah Gouran to Murara Devi Stage 1st Package No. JK14-454

Quantity of muck to be generated during execution of the project = 101970 cum.

Estimated quantity of hard rock @ 15% = 15295 cum

Estimated quantity of ordinary rock @ 25% = 25492 cum

Estimated quantity to be used at site including filling of embankments etc. @ 10% = 10197 cum

Estimated quantity left for disposal = $101970 - (15295 + 25492 + 10197) = 50356$ cum

Estimated quantity on the basis of soil compaction factor (40% of 50356 cum) = 20142 cum

Volume/Capacity of dumping sites required for muck disposal = $50356 + 20142 = 70498$ cum

Remarks: The quantity of muck generated and ordinary/hard rock material has been estimated on the basis of DPR of the project. This rock material will be utilized at site for construction purposes, filling in retaining walls, abutments, wing walls and boulder packing etc. Also the ordinary soil quantified at around 10% of the total generated muck will be utilized at site for filling of trenches and embankments etc.
