

Justification of Length and Width

Point No. 11

Total length of road passing through forest land is 3.153 km., and width of the road has been taken between 5 mtr to 7.00 mtr . Due to more curves/ bends in the alignment which are as per natural profile, the average width of road is 6.78 mtr which is between 5.00 mtr to 7.00mtr and also as per road specification & IRC norms. Total area required for road in forest land is $3153 \times 6.78 = 21377 \text{ m}^2$. Or say 2.1378 hac and 6 no dumping site proposed in forest land having area 0.7612 hac . The total forest land required for proposal is $2.1378 + 0.7612 = 2.899 \text{ hac}$ Detail already attached in the proposal folder .
