### UNDERTAKING FOR MITIGATION MEASURES TO BE ADOPTED

The mining lease area consists of quartzite rock which is hard (Hardness seven in the Moh'ss Scale of hardness) and is quite stable. Moreover, systematic and scientific mining proposed in the approved mining plan provides for 4x4 Mtrs. benches (4 meter height and 4 meter width), thus eventually the hill will have an angle of 40 degrees post mining. Also, as an abundant precaution retaining walls will be constructed wherever necessary.
