1. Introduction and Background

Government of India, Ministry of Coal has allotted to M/s Rajasthan Rajya Vidyut Utpadan Nigam Limited. Parsa East & Kente Basen Coal block situated at Village: Parsa, Tehsil-Udaipur, Distt-Surguja for fulfilling the requirement of Coal for their Thermal Power Stations situated at Kalisindh & Chhabra etc. in the State of Rajasthan.

For transportation of coal to the end user, Railway corridor has been proposed in between SURAJPUR road Railway Station and PEKB Coal Mine. The Rail Corridor is being constructed under the banner of Sarguja Rail Corridor Pvt. Ltd. (SRCPL), for fulfilling the SRCPL traction power requirement 132KV/25KV traction substation has been proposed at KAUSHALPUR, RAMANUJNAGAR. Chhattisgarh State power Transmission Company limited Raipur has approved the final Route of transmission line from 220/132kv Substation situated at Vishrampur, Distt.-Surguja to proposed 132KV/25KV substation at KAUSHALPUR, Near RAMANUJNAGAR. Total Route length of transmission line is 30.55kms (approx.).

132kV Vishrampur-Ramanujnagar Transmission line passes through three tehsils of Surajpur District- Tehsil Surajpur, Pilkha and Ramanujnagar. The entire route passes through Surajpur Forest Division, under Surguja forest circle.

In Surajpur forest Division, Transmission line passes through Ramanujnagar and Surajpur forest Range. The proposed route surveyed and finalized in such manner optimizing of forest land and it passes through revenue forest and protected forest land. Total forest land proposed to be diverted is 4.940 Ha in which Revenue forest land is 4.253 Ha and Protected forest land is 0.687 Ha.

Total Forest land proposed for diversion is 4.940 Ha.

Specially designed towers are proposed to be used for transmission line passing through the forest patches such that the ground clearance of bottom conductor is above 14 meters.

This Project will fulfill the Traction Power Requirement of M/s Surguja Rail Corridor Pvt. Ltd. for Operation of Railways and will also help in smooth transportation of Coal.

Fig-1: 132KV Transmission Line Corridor on Satellite Imagery

As per directives of Ministry of Environment & Forests dated 8th July 2011; all applications seeking diversion of forest land for non-forest purpose under Forest Conservation Act, 1980 must be accompanied with Geo-referenced shape file (both soft copy and hard copy maps) of the forest land proposed for diversion prepared using Differential GPS (DGPS).

To meet this requirement of MoEF, CSPTCL entrusted the DGPS survey work to M/s Geotrax International Services, Raipur, which is specializing in such assignments.

2. Scope of Work

4. Brief description of the Technical approach

4.1 Input Data

The land plan and maps required for geo-referencing were provided by Sarguja Rail Corridor Private limited to M/s Geotrax International Services.

4.2 GIS Data Preparation

Based on the input data (maps, tower details) and information provided by Revenue Department of Surajpur, the DGPS base station - Primary and Temporary Benchmarks Control Points (PCP and TBM) in the project area are planned. One PCP with 72 hours observation was planned and established on the roof top of the Forest Department Guest House (Shiv Park), Surajpur. Using satellite imagery TBM are planned at an average of every 10km distance along the 132 KV Transmission line.

Fig-2: Satellite Image showing the location of the Primary Control Point

4.3 Establishment of Primary Control Point

The Primary Control Point (PCP) with 72 hours of DGPS Observation was established as the DGPS base station. The PCP was established in the roof top of the Forest Department Guest House (Shiv Park) in Surajpur. As per Survey of India (SOI) Guideline, the PCP is to be fixed through continuous observation for 72 hours duration. The 72 hours of observation was carried out using DGPS from 21stJan 2016 to 23rdJan 2016. The observed data was processed with reference to the data of International GNSS Service (IGS)

stations as per SOI guideline (IGS processed report is enclosed as Annexure-1).

The coordinate of the PCP is as follows:

Latitude: N23°12'52.39830", Longitude: E82°52'59.05540"

Easting: 692697.708m, Northing: 2568519.766m (as per UTM Zone 44N)

Elevation (EGM2008): 546.155m, Ellipsoidal Height: 486.573 m.

4.4 Establishment of Secondary Control Point (SCP) & Temporary Bench Marks (TBM)

One Secondary Control Point is established at Satpata (Bishrampur) Substation office, Tehsil Pilkha, District Surajpur. Temporary Bench Marks established at an average of 10km distance on near permanent locations along the 132 KV tower corridor. The DGPS observation of 4 hours duration is carried out on the Secondary control points and Temporary Bench Marks is established with reference to Primary Control Point.

4.5 DGPS Survey

DGPS survey was carried out using a pair of DGPS instrument. One DGPS Instrument was used as Base Station. The Base station for the survey was established at the nearest TBM. The distance between the Base Station PCP/TBM and rover was always less than 5km.

The other DGPS instrument was working as Rover. The survey was conducted in Real Time Kinematic (RTK) mode. The Survey team carried out DGPS Survey of 132KV tower centerline by walking along the corridor. DGPS readings were collected at every 50m distance along 132KV transmission line and at prominent locations such as culverts, bridges etc. were recorded. For Geo-referencing village maps on an average of 10 GCPs were collected for each village.

The static data is Post Processed using Trimble Business Centre software for obtaining the TBM coordinates.

4.6 Creation of Vector Layers of the 132KV Transmission Line

The power line centerline points captured through DGPS were plotted in the GIS Software and the centerline was created by joining the points. Along with power line centerline, the corridor points captured using DGPS were also plotted and the corridors were created. Several DGPS points (TBM) taken at prominent near-permanent locations were also plotted. After editing the layers, the final centerline and Tower line corridor is created as per the requirement of CSPTCL.

4.7 Geo-referencing of cadastral map

The Ground Control Points (GCP) fixed through DGPS survey were used to geo-reference the digitized cadastral maps by applying the co-ordinate value of the field observation to the corresponding point on the map.

4.8 Creation of Forest Patches

After application of geometric corrections (geo-referencing of cadastral), and overlaying the 132KV power line corridor layer, the forest patches were extracted from individual cadastral map (as per land schedule revenue forest and non-forest khasra are identified) along with computation of DGPS co-ordinates of forest land patch boundary.

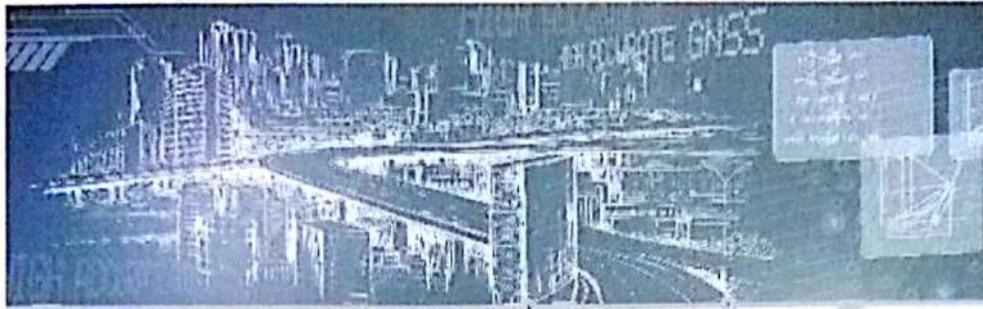

4.9 Specification of DGPS Equipment

Geotrax deployed the most advance and hi-precision devices to carry out the DGPS survey. The DGPS performance specifications are given below. The corresponding fact sheets are placed below for ready reference.

COMNAV

T300 GNSS Receiver

RTK robust enough for challenging environments, in a device that is light and easy to carry

With decades of experience in the surveying GNSS receiver, the T300 is a product which combines lots of market proved advantages together. It can track all the working GNSS constellations. By using ComNav's unique QUAN™ algorithm technology, it can function in RTK mode with all the GNSS constellations or by using any single GNSS constellation such as GLONASS or BeiDou. The strong anti-interference ability of the receiver makes it possible to work in any environment.

Design driven to improve user experience

Our R&D people are always thinking about how to improve the physical experience of users and workflow in the field. With this in mind, the T300 integrates a cutting edge GNSS board, Bluetooth®, UHF (Rx&Tx) into a compact board. Smart design makes the T300 the lightest and smallest (volume) receiver in the world.

Hot swap battery design

Extending the field working time is also a passion for our R&D people. They do lots of tests and analysis to reduce the power consumption, and make the whole system work more efficiently. In parallel, they've designed in the capability to hot swap the battery source. When the working sounds and LED flashes, put your second battery in place. Then recharge the first while you keep working.

Consumer grade batteries... always available

Working power in the field is significantly inconvenient for users, as the batteries for GNSS receivers are often unusual types and not readily available. Once again our R&D people developed a solution so that the T300 runs on normal consumer batteries.
