OMC | ODISHA NEW OPPORTUNITIES

Mining Happiness

Letter No. 7916 /OMC/F&E/2025

19th May, 2025

To

The Divisional Forest Officer
Keonjhar Wildlife Division
Anandapur

Sub: Proposal for diversion of balance forest land of 746.3325 ha in favour of M/s OMC Ltd. within total forest land of 846.3995 ha located within approved Mining lease area of 1018.3085 ha for Iron Ore Mining in Daitari Mining lease in Cuttack Forest Division of Jajpur District and Keonjhar (WL) Division of Keonjhar District, Odisha) - reg.

Ref.: Letter No.8-28/2015 FC dt.17.05.2024byMoEF&CC, Govt. of India (FC Division).

Sir,

MoEF&CC, Govt. of India while examining the proposal for diversion of 746.3325 ha of balance forest land pertaining to Daitari Iron Ore Mines of OMC Ltd. in Keonjhar and Jajpur district of Odisha has sought information on eight observations vide letter cited under reference for consideration of Stage-I Forest Clearance in respect of the captioned proposal. The point wise reply to the observations raised is given as under:

i) The revised KML of project area along with attributes of forest and non-forest area & ownership/managing agency;

Reply by OMC: It is submitted that the revised KML of project area over 405.26 ha [Forest: 344.25 ha (Diverted: 95.60 ha + Virgin: 248.65 ha) + Non-forest: 61.01 ha] is given in the CD enclosed herewith. The attributes of forest and non-forest area& ownership/managing agency is given as under:

Sl. No.	Name of the area	Area in Ha	Managed by	Remarks
Keonjhar (WL) Division, Anandapur, Keonjhar District				
1	Rebena Reserved Forest (RF)	142.62	Forest Dept.	RF part of area proposed for Diversion
2	Rebena RF	59.254	Forest Dept.	Approved by MoEF& CC
3	Rakhita, Gramya Jungle	3.78	Revenue Dept.	RF part of area proposed for Diversion
	Sub-Total	**205.654**		
4	Non-forest land	61.01	Revenue Dept.	
	Total (A)	**266.664**		
Cuttack Forest Division, Jajpur District				
5	Daitari Protected Forest (PF)	102.25	Forest Dept.	PF part of area proposed for Diversion
6	DaitariPF	36.346	Forest Dept.	Approved by MoEF& CC
	Total (B)	**138.596**		
	Grand Total (A+B)	**405.26**		

The authenticated details of the same is enclosed as **Annexure-I**.

ii) Updated report on the number and species of trees affected after reassessment of the reduced area (forest as well as non-forest area) recommended by the ICFRE for taking up mining activities.

Reply by OMC: It is submitted that out of the reduced area of 405.26 ha recommended by ICFRE 205.654 ha of forest land and 61.01 ha of non-forest land is coming under Keonjhar Wildlife Division, Anandapur and 138. 596 ha of forest land is coming under Cuttack Forest Division. OMCvide letter No. 8908/OMC/F&E/2024 dt. 01.06.2024 requested DFO, Cuttack and vide letter No. 8906/OMC/F&E/2024 dt. 01.06.2024 requested DFO, Keonjhar Wildlife Division, Anandapur to pass necessary instruction to carryout enumeration of trees standing on the revised forest and non forest area. The entire enumeration work has been completed under the direct supervision of Cuttack Forest Division and Keonjhar (WL) Division. Enumeration has been carried out taking 10 no. sample plots of 2 Ha each both in Rebena RF and Daitari PF, whereas detail tree enumeration has been carried out over 3.78 ha of Revenue Forest and 61.01 ha of non-forest land. The brief of the tree enumeration conducted is given as under:

Sl. No.	Name of the area	Area in Ha	No. of trees enumerated	No. of trees to be felled.
Keonjhar (WL) Division, Anandapur, Keonjhar District				
1	Rebena RF	142.62	8266 (10 Sample plots)	58945
2	Rebena RF	59.254	0	0
3	Rakhita, Gramya Jungle	3.78	705	705
Sub-Total				59650
4	Non-forest land	61.01	10803	10803
Total (A)				70453
Cuttack Forest Division, Jajpur District				
5	Daitari Protected Forest	102.25	11247 (10 Sample plots)	57501
6	Daitari Protected Forest	36.346	0	0
Total (B)				57501
Grand Total (A+B)				127954

As per above, 70453 no. of trees standing in area coming under Keonjhar (WL) Forest Division (59650 nos. in forest land and 10803 nos. in non forest land) and 57501 no. of trees standing in area coming under in Cuttack Forest Division will be affected due to mining and ancillary activities.

The detailed updated report on the number and species of trees going to be affected considering the reduced area of 405.26 ha, recommended by ICFRE, duly authenticated by DFO, Cuttack Forest Division and DFO, Keonjhar (WL) Division is enclosed as **Annexure-II**.

iii) A considered opinion on impact of mining operations on 28 rare, endangered and threatened species found in the area and mitigation measures proposed for their conservation and protection.

Reply by OMC: It is submitted that ICFRE vide F. No. 1-99/2019-ADG (EM)/IOM DML (WL) ICFRE/1101 dt. 15.07.2024 has submitted a suitable reply referring Chapter-7, Section 7.3.1.1 of their final report. The copy of the letter by ICFRE with enclosures is given as **Annexure-III** for kind perusal.

In the said letter, threat to 27 RET species (out of 28) has been suggested to be mitigated through in-situ conservation. One species named *Entadarheedei* has been suggested to be protected through *ex-situ* conservation and for this, a species-specific conservation plan is required to be prepared and implemented. Hence, in line with the suggestion, a request has been made before DFO, Keonjhar WL Division vide letter no. 7857 dt. 17.05.2025, copy of the letter is enclosed as **Annexure – IV**.

iv) Comments and recommendations of the Water Resource Department on the impact of the mining on the local hydrological regime in the and around the lease area on the proposed mining may be submitted by the State.

Reply by OMC: Comments and recommendations of the Water Resource Department on the impact of the mining on the local hydrological regime in the and around the lease area on the proposed mining has been obtained vide letter No. 35618, dt. 26.12.2024, copy of the same is enclosed as **Annexure-V(A)**and an undertaking by OMC Ltd. to adhere the recommendations made by Water Resource Department is given at **Annexure-V(B)**.

v) A summary of the total mining leases approved under the Adhiniyam vis-à-vis their approved peak capacity and production level actually achieved in general and in r/o OMC leases in particular. The State Government shall also submit its comments on opening of such a huge area having sensitive conservation issues vis-a-vis the target of production and estimated shortfall in coming years;

Reply by OMC: A summary of total mining leases approved under the Adhiniyam with their approved peak capacity and production level actually achieved during FY 2024-25 of mining leases of OMC is enclosed as **Annexure-VI**.

Further it is submitted that, OMC vide letter No. 10642/OMC/F&E/2024 requested the Director of Mining & Geology, Department of Steel and Mines, Govt. of Odisha to share its comments on opening of such a huge area having sensitive conservation issues vis-a-vis the target of production and estimated shortfall in coming years to submit with MoEF&CC, Govt. of India to comply the condition. It is learnt that, Dept. of Steel and Mines, Govt. of Odisha has shared comments on the justification of using the reduced area within Daitari ML considering the conservation issues and production and estimated shortfall in coming years. Copy of the letter is enclosed as **Annexure-VII**. It has been clarified that following the Viksit Bharat Vision Document, the target for production of Iron Ore would be about 250 Million tonnes and 320 million tonnes by the end of 2036 & 2047 respectively. To achieve the huge target of 320 MMT by 2047, around 403 Sq. Kms of iron Ore bearing land would be required to be brought under mining operations. Currently, OMC Ltd. contributes 20% of the total iron ore production in the State. Following, the same pace and ratio of production, the OMC Ltd. would be required to produce at least 64 MMT of Ore annually in order to contribute towards the target production of 320 MMT by 2047.

vi) The revised mining plan for reduced area recommended by the ICFRE in its report, may be provided by the State Government.

Reply by OMC: It is submitted that the Mining Plan (MP) already approved by IBM vide letter No.BBS/IIP/ IRON/2197/MRMP/2022-23 dt 28.11.2022 over the ML area of 1018.3085 ha has been revised and approved vide letterNo. RMP-2308/2024-25-IBM_RO_BBS dt. 26.12.2024considering the mine working till conceptual period confined to the revised area of 405.26 ha recommended by ICFRE out of the total ML area over 1018.3085 ha. The copy of the revised approved MP by IBM showing mine working within the reduced area recommended by ICFRE is enclosed as **Annexure-VIII**.

vii) The revised cost benefit analysis after accounting the EG & S being lost and net economic gains from project to be submitted by the State.

Reply by OMC: It is submitted that basing on the request made by OMC vide letter No. 9960/OMC/F&E/2024 dt 19.06.2024, ICFRE vide F. No. 1-99/2019-ADG (EM)/IOM-DML(WL)-ICFRE/1101 dt

15.07.2024 has submitted a suitable reply referring Chapter-5, Table No.5.8 of the Final Report (Vol-I) by ICFRE. ICFRE has also intimated that the EG&S losses in monetary terms have been given at Column-I of the Table 5.8. The copy of the letter by ICFRE along with enclosures are given at **Annexure-IX** for kind perusal.

viii) The ICFRE has recommended mining over reduced area which was further suggested to be reduced by the Sub-Committee of AC. The State Government and user agency may comment on the economic feasibility of mining operations over reduced area.

Reply by OMC: It is submitted that, comments on the economic feasibility of mining operation over reduced area is given at **Annexure-X**, as examined the requirement of revised area of 405.26 ha is the bare necessity to continue mining at Daitari Iron Ore Mines.

Yours faithfully,

Encl.: As above

(Debendra Kumar Nanda)
Chief Vigilance Officer and Land Officer
Authorized Signatory

Annexure-I

ATTRIBUTES OF THE REVISED FOREST AND NON-FOREST AREA OVER 405.26 HA WITH OWNERSHIP/MANAGING AGENCY PERTAINING TO DAITARI IRON ORE MINES OF OMC LTD.

A. ATTRIBUTES OF REVISED FOREST AND NON-FOREST AREA:

F. No. 1-99/2019-ADG (EM)/IOM-DML(WL)-OMC/ICFRE/110/ Dated: 15.07.2024

To

The Chief Vigilance Office and Land Officer
Forest & Environment Section
Odisha Mining Corporation Limited (OMCL)
Govt. of Odisha, Bhubaneswar

Subject: Proposal for diversion of balance forest land of 746.3325 ha in favour of M/s. OMC Ltd. within total forest land of 846.3995 ha located within approved Mining Lease area of 1018.3085 ha for Iron Ore Mining in Daitari Mining Lease in Cuttack Forest Division of Jajpur District and Keonjhar (WL) Division of Keonjhar District, Odisha – reg.

Reference: Your office letter No. 10453/OMC/F&E/2024 dated 26.06.2024

Sir

With subject and reference as cited above, please find reply from the ICFRE pertaining to conditions no. iii and vii as under:

Condition No.	Condition	Reply from the ICFRE
iii.	A considered opinion on impact of mining operations on 28 rare, endangered and threatened species found in the area and mitigation measures proposed for their conservation and protection.	▪ Mining operation will lead to loss of habitat of 10 RET species reported from core zone. However, common occurrence of 09 species among these in buffer zone will provide habitat for their survival and sustenance. ▪ RET species- *Entada rheedei* only recorded from core zone is under threat due to loss of its habitat resultant from mining operation. Therefore, it is required to be protected through *ex-situ conservation*. A Species Specific Conservation Plan for this species is required to be prepared and implemented. ▪ Threat to 27 RET species has been suggested to be mitigated though *in-situ* conservation in Chapter-7, section 7.3.1.1 at page 417 of the final report-vol-I (*Annexure-I*).
vii.	The revised cost benefit analysis after	▪ A comparative account of ES&G losses

Contd.

Condition No.	Condition	Reply from the ICFRE
	accounting the EG&S lost and net economic gains from project to be submitted by the State.	under column I-IV for different scenarios of forest diversion (i.e. 248.647 ha, 317.541 ha, 746.33 ha and 1018.30 ha) area and benefits from enhanced iron ore production @ 6MTPA beside net economic gain/expected profit is given in Table- 5.8, Chapter-5, page 353 of the final report-vol-I (*Annexure-II*). Further ES&G losses in monetary terms for ICFRE suggested forest diversion (248.647 ha) in given at Column-I of the Table 5.8

Further, please feel free to contact this office for any further clarification in the matter. It is also requested to release the balance funds due in favour of the ICFRE at an early date please.

This is for information and needful.

Thanks

Yours faithfully,

Encl.- As above

(Dr. A. N. Singh) 15/07/24
Asstt. Director General (EM)

Copy to: DDG (Extn.), ICFRE for information.

As a result of various alternatives discussed in the report an area of 309.66 ha *i.e.*, 41.49% will be utilised against the OMCL applied diversion area (746.33 ha) and therefore 58.51% of forest area from the applied area will be available for maintaining the forest cover intact, if expansion is considered by MoEF&CC.

The area (309.66 ha) suggested by ICFRE for mining and allied activities for DIOM of M/s. OMCL have considerably contributed to reduction forest area applied for diversion and approved in the mining plan (2020-25). The area suggested to preserve intact within the core area of the mine lease area is documented with significant stand density (1753.19 ind./ha), 3.50 Shannon wiener index and significant number of RET species as compared to the proposed mine site will facilitate in maintain the forest cover in the core of the mine lease also part of proposed corridor Similipal and Saktosia. The proposed forest area to be preserved intact 613.05 ha (include 28.21 ha non-forest area) shall be made in association with the State Forest Department that fall both in Keonjhar Wild life Division and Cuttack Forest Division, also part of the proposed corridor has connectivity with the adjacent forest cover. The proposed forest area (613.05 ha) to be preserved will continue to provide the environmental service specific to the forest for the wellbeing of the dependants

7.3.1.1 Terrestrial flora

The Mining Lease Area (MLA) and its buffer zone is very important in view of its phytogeography and occurrence of Rare, Endangered and Threatened (RET) plant species. A total of 28 **RET plant species** were reported from the entire area *i.e.*, both in core and buffer areas. The RET plants are having conservation importance needs to be rehabilitated appropriately (*In-situ* conservation) within their natural habitat prior to initiation of mining and its allied activities in the proposed area.

7.3.1.2 Habitat protection

The abundance and diversity of animal species is largely dependent on the availability of suitable habitats and characteristic vegetation cover on which they depend for their various biological needs. The approved **Site-Specific Wildlife Conservation Plan** for Daitari iron ore mine with a total financial outlay of Rs. 2,410.015 Lakhs as on 16.08.2018 holistically dealt with the measures required for conservation of wildlife in Keonjhar Wildlife Division and Cuttack Forest Division. In addition, following are the specific recommendations for appropriate implementation to achieve additional safeguards to enhance the habitats for wildlife forms.

7.3.1.3 Terrestrial fauna (wildlife)

- The 11 km long conveyer belt that starts from Hill Top pit to Baliparbat Stockyad and passes through both the Talapada and Baliparbat beats of Keonjhar WL Division hampers the free movement of wildlife in the forest corridor connecting the Similipal and Satkosia Tiger Reserves. It is therefore recommended to raise the height of the conveyer belt to six to eight meters at the place of five to six meters as in draft report (changes made 6.8

Environmental Service Loss and Economic Benefit

Benefit analysis for proposed production enhancement from 3 MTPA to 6 MTPA to extract 168.668MT for 28 years using direct and indirect benefit expected to incurred were estimated using statistical data projecting cost escalation and Social Discount Rate (SDR). Environmental loss estimated for the forest area as comparative for the life of mine (28 years), the rotation period of the forest (64 years) and total (28+64=92 years) estimated for 1%,4% and 10% Social Discount Rate (SDR) are presented in Table 5.8. The value for the forest increases with the decrease in SDR.

Table 5.8: Comparative analysis of ecological service loss for the forest area and economic benefit perceived to be incurred for the enhanced production of iron ore 6 MTPA for DIOM, OMCL, Odisha

Ecological service loss monetary valuation for the forest area perceived to be lost due to mining					
No. of Years	SDC	Net Present Value (Rs. in crore) 248.647 ha	Net Present (Rs. in crore) 317.541 ha	Net Present Value (Rs. in crore) 746.33 ha	Net Present Value (Rs. in crore) 1018.3* ha

Government of Odisha
Department of Water Resources
****

No. 35618 /WR., Date: 26/12/2024
Irr.-II-WRC-108/2024

31/12/24

From

Smt. Arali Rout, OAS (SAG)
Additional Secretary to Government.

To

The Chief Vigilance Officer and Land Officer,
M/s OMC Ltd.

Sub: Proposal for diversion of forest land of 746.3325 ha in favour of M/s OMC Ltd. within the total forest land of 846.3995 ha located within approved mining lease area of 1018.3085 ha for iron ore mining in Daitari Mining lease in Cuttack Forest Division of Jajpur District and Keonjhar (WL) Division of Keonjhar District.

Ref:- Letter No. 9224/ OMC dated 05.06.2024 of OMC Ltd.

Sir

I am directed to invite reference to the subject and letter cited above and say that after careful consideration, Department of Water Resources have recommended to adhere the following points by OMC Ltd. to mitigate the impact of mining on the local hydrological regime in and around the lease area of OMC for diversion of balance 746.3325 ha. of Forest land.

1. Removal of accumulated silt in the check dam at base of hill road on regular basis.
2. Construction of Gabion Structure at the stream near roadside.
3. Providing proper roadside drain with slit trap.
4. The rain fall run off in this section of road provided with concrete/ paved pathway.
5. Regular cleaning of old culvert with proper silt traps in hill side of road also systematic silt management and water conservation action plan in the entire hill road.
6. Optimum utilization of Ground water from bore wells in order to avoid wastag[illegible] water. Regular monitoring of ground water level and quality to be continu[illegible] undertaken.
7. Ground water recharge structures and rainwater harvesting systems may be implemented in order to replenish the ground water storage of the area.
8. The domestic wastewater may be adequately treated with acceptable standards Stipulated by OPCB/CPCB, so that the wastewater will not have any adverse impact on the environment.

1/1/25

2/01/25

(12)

9. The mine discharge water during pumping of collected rainwater from mine pits, which may contain silt, needs sedimentation, before discharge into the natural water course/ open land.
10. De-silting ponds check dams, reservoir to facilitate recharge of ground water. Recycling & reuse of water should be practiced.
11. The raw water may be used for purposes like horticulture, dust suppression etc.
12. Automated Water sprinkler system can be used for dust suppression in and around the Mines and roads.
13. Regular environmental monitoring should be conducted to assess / monitor water quality as per guidelines.
14. Diversion proposal of Kukurangi nallah, Patna nallah and Sasubhuashuri nallah passes within the lease area of Diatari iron ore mine in Baitarani River basin if any required, alignment of the proposed diversion channel, sectional details of the diversion channel and design discharge of the diversion channel to be vetted by DoWR before execution of the diversion proposal.

Yours faithfully,

26.12.24

UNDERTAKING

[As per letter No. 35618, dt.26.12.2024 of Department of Water Resources, Govt. of Odisha, on Proposal for diversion of balance forest land of 746.3325 ha in favour of M/s OMC Ltd. within total forest land of 846.3995 ha located within approved Mining lease area of 1018.3085 ha for Iron Ore Mining in Daitari Mining lease in Cuttack Forest Division of Jajpur District and Keonjhar (WL) Division of Keonjhar District, Odisha]

I, Debendra Kumar Nanda, OAS, Chief Vigilance Officer and Land Officer, Authorized signatory O.M.C. Ltd do hereby undertake the following to mitigate the impact of mining on the local hydrological regime in and around the Daitari Mining Lease for furtherance ofdiversion of balance forest land of 746.3325 ha in favour of M/s OMC Ltd. within total forest land of 846.3995 ha located within approved Mining lease area of 1018.3085 ha in Cuttack Forest Division of Jajpur District and Keonjhar (WL) Division of Keonjhar District, Odisha

- ✓ To remove accumulated silt in the check dam at base of hill road on regular basis.
- ✓ Construction of Gabion Structure at the stream near roadside.
- ✓ To provide proper roadside drain with slit trap.
- ✓ To provide with concrete /paved pathway for rain fall run off in this section of road.
- ✓ Regular cleaning of old culvert with proper silt traps in hill side of road also systematic silt management and water conservation action plan in the entire hill road.
- ✓ Optimum utilization of Ground water from bore wells in order to avoid wastage of Ground water. Regular monitoring of ground water level and quality to be continued as being undertaken.
- ✓ To implement Ground water recharge structures and rainwater harvesting systems in order to replenish the ground water storage of the area.
- ✓ Adequate treatment of domestic wastewater with acceptable standards Stipulated by OPCB/CPCB, so that the wastewater will not have any adverse impact on the environment.

- ✓ Sedimentation of mine discharge water during pumping of collected rainwater from mine pits, which may contain silt, before discharge into the natural water course/ open land.
- ✓ De-silting ponds check dams, reservoir to facilitate recharge of ground water and to practice recycling & reuse of water.
- ✓ To use raw water for purposes like horticulture, dust suppression etc.
- ✓ To use automated Water sprinkler systemfor dust suppression in and around the Mines and roads.
- ✓ To conduct regularenvironmental monitoringto assess/ monitor water quality as per guidelines.
- ✓ Diversion Kukurangi nallah, Patna nallah and Sasubhuashuri nallah is not required. If any diversion requirement arises in future, alignment of the proposed diversion channel, sectional details of the diversion channel and design discharge of the diversion channel to be vetted by DoWR before execution of nallah diversion proposal.

ANNEXURE -VII

Government of Odisha
Steel & Mines Department
*****

Letter No 3698 /SM, Bhubaneswar, Dated 19/04/2025
SM-MC1-MC-0044-2024

From

Sri Surendra Kumar, I.A.S.
Additional Chief Secretary to Government

To

The Additional Chief Secretary,
Forest, Environment and CC Department
Government of Odisha.

Subject: Submission of Compliance in Respect of Diversion of 746.3325 Ha of Forest Land for Daitari Iron Ore Mines of OMC Ltd. for Grant of Stage-I Forest Clearance.

Sir,

This pertains to the diversion of 746.3325 hectares of forest land out of a total forest area of 846.3995 hectares, within the approved Mining Lease (ML) area of 1018.3085 hectares, in respect of the Daitari Iron Ore Mines of Odisha Mining Corporation Ltd. (OMC Ltd.), located in the Cuttack Forest Division and Keonjhar (WL) Division.

The OMC Ltd. has complied with the observations raised during the third round of discussions by the Forest Advisory Committee (FAC), and a compliance report was was also submitted by the State Government to the Ministry of Environment, Forest and Climate Change (MoEF&CC) on 17.03.2023. Subsequently, the proposal was discussed in the fourth meeting of the FAC held on 25.04.2023 and following that, the MoEF&CC communicated eight additional observations on the proposal vide their communication on 10.05.2024 (copy enclosed), which are currently under examination and appropriate compliance will be submitted soon.

The important facts in this issue are placed herewith for kind appreciation.

The MoEF&CC, Government of India have raised the issue of opening of such huge forest area having sensitive conservation issue vis-à-vis the target of production and estimated shortfall in coming years. In response, it can be stated that following the Viksit Bharat Vision Document, the target for production of the Iron Ore would be about 250 Million Tonnes & 320 Million Tonnes of by the end of 2036 & 2047 respectively. Currently, with 214.10 Sq. Km. of total lease area & 133.19 Sq. Km of diverted forest area within the said lease area, the State of Odisha is producing 169.80 MMT of iron ore (2023-24). To achieve the huge target of 320 MMT by 2047, around 403 Sq. Kms of iron ore-bearing land would be required to be brought under mining operations.

That, currently, the OMC Ltd. contributes 20% of the total iron ore production in the State. Following the same pace and ratio of production, the OMC Ltd. would be required to produce at least 64 MMT of iron ore annually in order to meet the target of production of 320 MMT target by 2047. The OMC Ltd. being the largest merchant producer of iron ore in

the State, plays a critical role in supplying raw materials to iron and steel industries, especially, the State based end-use Industries.

Hence to ensure an uninterrupted and enhanced supply of iron ore is vital for maintaining the pace of industrial growth in the State aligning with national production targets. In view of the above the requirement for additional forest land diversion is very much essential to maintain and scale up the production of Iron Ore in accordance with national objectives while supporting the state's industrial ecosystem.

This may kindly be placed before the Ministry of Environment, Forest & Climate Control, Government of India, for favourable consideration of diversion of Forest area for the Daitari Iron Ore Mines.

Yours faithfully,

Encl: As above

Additional Chief Secretary to Government

ANNEXURE – VIII

By e-mail

GOVERNMENT OF INDIA
MINISTRY OF MINES
INDIAN BUREAU OF MINES
OFFICE OF THE REGIONAL CONTROLLER OF MINES, BHUBANESHWAR

No. RMP-2308/2024-25-IBM_RO_BBS Dt : 26/12/2024

Shri/M/s. THE ORISSA MINING CORPORATION LIMITED ,
A GOVT. OF ORISSA UNDERTAKING OMC HOUSE, UNIT-5, POST BOX NO.34 BHUBANESWAR

Sub : Approval of the Review of Mining Plan along with Progressive Mine Closure Plan (PMCP) in respect of Daitari Iron Ore Mine over an area of 1018.3085 ha. of M/s The Odisha Mining Corporation Ltd. situated in Village- Daitari, Tehsil- Daitari, District– Keonjhar of Odisha State.

Approved

Sir,

In exercise of the powers conferred by clause (b) of sub-section (2) of section 5 of the Mines & Minerals (Development & Regulation) Act, 1957 and Rule 16, clause (2) of Rule 17 of the Minerals (Other than Atomic and Hydro Carbons Energy Minerals) Concession Rules, 2016 read with Government of India Order No. S.O. 1857(E) dated 18th May, 2016; I hereby **Approve** the Review of Mining Plan along with Progressive Mine Closure Plan (PMCP) in respect of Daitari Iron Ore Mine over an area of 1018.3085 ha. of M/s The Odisha Mining Corporation Ltd. situated in Village- Daitari, Tehsil- Daitari, District– Keonjhar of Odisha State. This approval is subject to the following conditions:-

(1). The Review of Mining Plan is approved without prejudice to any other law applicable to the mine area from time to time whether made by the Central Government, State Government or any other authority and without prejudice to any order or direction from any court of competent jurisdiction.

(2). That this approval of aforesaid Review of Mining Plan does not in any way imply the approval of the Government in terms of any other provision of Mines & Minerals (Development & Regulation) Act, 1957, or the Mineral Concession Rules, 2016 and any other laws including Forest (Conservation) Act, 1980, Environment (Protection) Act, 1986 or the rules made there under and other relevant statutes, order and guidelines as may be applicable to the lease area from time to time.

(3). The provisions of the Mines Act, 1952 and Rules and Regulations made thereunder including submission of notices of opening, appointment of manager and other statutory officials as required by the Mines Act, 1952 shall be complied with.

(4).The execution of Review of Mining Plan shall be subjected to vacations of prohibitory orders / notices, if any.

(5). If anything is found to be concealed as required by the Mines Act in the contents of the mining plan and the proposal for rectification has not been made, the approval shall be deemed to have been withdrawn with immediate effect.

(6). This approval for proposed mining operations and associated activities is restricted to the mining lease area only from this date. The mining lease area is as shown on the statutory plans by the Lessee/QP/Applicant and Indian Bureau of Mines has not undertaken any survey verification of mining lease boundary on the ground.

(7). Your attention is invited to the Supreme Court interim order in W.P. (C) No. 202 dated 12.12.1996 for compliance. The approval of above said Mining Plan is therefore, issued without prejudice to and is subject to the said directions of the Supreme Court as applicable.

(8).This department does not undertake any responsibility regarding correctness of the boundaries of the lease area shown on the ground.

(9).At any stage, if it is observed that the information furnished in the document are incorrect or misrepresent facts, the approval of the document shall be revoked with immediate effect.

(10). If this approval conflicts with any other law or court order/ Direction under any statute, it shall be revoked immediately.

(11). It shall be mandatory for the project proponent, abstracting ground water, to obtain "No Objection Certificate" from Central Ground Water Authority or, the concerned State/Union Territory Ground Water Authority, as the case may be.

(12). Lessee shall ensure grassing/re-grassing of worked out mining lease area in accordance with Hon'ble Supreme Court Order dated 08/01/2020.

(13). This approval has been given for mining proposal for the year 2025-26 to 2029-30 and are subject to the validity of lease period.

(14).The next Review of Mining Plan for the subsequent period of five years shall become due 180 days before expiry of this document proposal period.

(15). The validity period of the financial assurance shall be renewed before the expiry of the same and should be submitted to this office on or before 01.04.2030.

(16). The feasibility report considered for reserve/resource estimation as per UNFC is submitted by the preferred bidder / lessee which is prepared based on the current data as reported and it may not establishes the future economic viability of mining project, which may be affected by the market dynamics and other related factors.

(17). Disposal of OB/Waste as minor mineral shall be carried out only after obtaining permission under Rule 12(1)(k) of Minerals (Other than Atomic and Hydro Carbons Energy Minerals) Concession Rules, 2016.

Yours Faithfully

2A.1.3 : Regional Geology

Regional Geology
Daitari Iron ore deposit forms a part of the Tomka-Daitari-Kalisagar-Rebana-Haribandanpur basin, which is considered to be older to the Bonai Iron Ore Horse Shoe described by Jones & Dunn Acharya (1976 & 1984). Iron ore formation of Daitari-Tomka basin overlies the granitic basement with an unconformity. The strike of the ore body swings between NNW-SSE and E-W with steep dip due west & south. Superimposition of complex fold system and faults are evident from the BIF and associated rocks. The origin is believed to be the leaching & replacement of Ferruginous shale. The principal ore mineral is hematite and the ore types are soft laminated ore, biscuity ore, blue dust, hard massive ore, hard laminated ore, lateritic ore, goethitic and limonitic ore. Regional Stratigraphy of the area, as per Acharya 2002 described as follows. Daitari-Tomka Range BIF-2 of Iron Ore Supergroup North of Cr-bearing ultrabasic Newer Dolerite B2 folding Dhanjori Quartzite Boulder Conglomerate -------- Angular Unconformity ~~~~~~ Pyroxinite Dykes Upper Phyllite Cr-bearing Ultrabasics(Intrusive) B & B1 Folding Feldspar Porphyry (Intrusive) Actinolite-tremolite schist (Intrusive & altered) Banded & Yellow Phyllite Pillow Lava,Other volcanic Dykes Fe-Phyllites Middle Banded Hematite and Chert and its variants and Iron Ore (BIF) (Marker Horizon) Banded Black Chert Mn-phyllite and small patches of Mn bodies Peridotite (talc schist) Banded phyllite Lower Phyllite Tuffite and ignimbrites Pillow lava Quartzite, quartz-schist and fuchsitised quartzite Chlorite, chloritoidbandstilpnomelanephyllite Yellow shale/phyllite ----------Nonconformity ~~~~~~~~~~~~~~~~ Singhbhum Granite Complex

2A.1.4 : Local Geology & Structure

2A.1.4.1 : Local Geological Set-up

Daitari Iron Ore Deposit is an isolated deposit forming a conspicuous ridge along the district boundary between Keonjhar and Jajpur towards the North of Sukinda Chromite belt. The lower metapellites form the basal unit of the sequence unconformably overlying the granitic basement. Conspicuous hills and tors of granite are abundantly found along Brambaripur-Harichandanpur road to the north of Daitari. The lower metapellites represented by phyllites, chlorite and chloritoid schist, lenses of quartzite & quartz schist, metavolcanics with tuffs & sediments, banded phyllites, slates, manganese bearing shale, ferruginous pyritiferous shale/phyllites, coarse dark coloured quartzite etc. are observed abundantly along the ghat-road section from Baliparbat up to the mines. Rocks of Banded Iron Formation consisting of Banded Hematite Jasper (BHJ), Banded Hematite Quartz (BHQ) overly the lower metapellites and are found outcropping near the primary crusher house. Outcrops of BHQ are also observed behind the Canteen in the mines. Highly weathered BHQ outcrop at about CS 1100S to 1300S close to the are observed. No BHQ/BHJ sequence has been reported occurring on the footwall side of iron ore mineralization Another smaller deposit occurs along Sindurimundi Hill to the immediate west of Daitari, separated by a patch of ferruginous shale/phyllites. This area indicates a zone of structural disturbance and four different faults are interpreted to be passing through this zone (Acharya 2002). Sindurimundi appears to be the most promising iron ore deposit in the area besides Daitari. The stratigraphical succession from the sub surface exploration and mine faces is as follows. Upper Metaphilites and Meta Volcanics;Laterite, Banded Iron Formation:BIF Iron ore LowerMetaphillitesand Metavolcanics:Psammitic rocks, Pelitic / Acid tuff, Dark gray cherty quartzite and BMQ/BMJ/BHQ and BHJ etc.

2A.1.4.2 : Structure

A large dolerite dyke of coarse grained dolerite cuts across the area which is found outcropping along the Ghat Road. Exposures of this dyke can be found at about 100m south of the Tarini Gate. Outcrops of basalt can be observed to the NE of the township along the stream. Pillow structures can be delineated with right side up direction. Daitari is the largest iron ore deposit in the Tomka-Daitari range, Iron Ore has developed by leaching of banded hematite jasper and enrichment of the lower tuffacious shale. Several smaller iron ore bodies have also been reported at Champajhar, Tangasiuni, Tomka, Baghiathali, Kalisagar and Nipania. These ore bodies are fine, BHJ (Acharya 2000) and broadly parallel to bedding and form massive to laminated ore deposits. Another smaller deposit occurs along Sindurimundi Hill to the immediate west of Daitari, separated by a patch of ferruginous shale/phyllites. This area indicates a zone of structural disturbance and four different faults are interpreted to be passing through this zone (Acharya 2002).

2A.1.4.3 : Lithology, Petrographic & Mineralogical Description for Major, Associated & Indicator Minerals

a.Soft Laminated Ore (SLO)/ Friable Ore Soft Laminated Ore (SLO)/Friable Ore (FO) is the predominant ore type. At several places a still softer variety of ore can be seen (exposed around CS 700 S) which is termed as the biscuit type of ore. These ore are extensively used in the Dry Screening Plant for production of calibrated lump ore (CLO) & fines.The minimum thickness is 0.9 mtr encountered in bore hole no. BH/71 and maximum thickness is 184 mtrs encountered in bore hole no.DTR/88, b.Hard Laminated/ Hard Massive Ore The northern part of the deposit is dominated by hard laminated and hard massive variety of ore. A crude linear contact can be inferred between the hard massive/laminated ore and the soft laminated/biscuit type of ore. The minimum thickness is 0.5 mtr encountered in bore hole no. BH/08 and maximum thickness is 68 mtrs encountered in bore hole no.DTR/113, c.Limonite/ Limonitic Ore The north western part of the mines (00 N/-250 E) hosts a predominantly limonitic ore zone which indicates the proximity of multiple fault zones causing limonitisation to a deeper level.All the ore types of Daitari are predominantly rich in limonite/goethite and hence rich in alumina and phosphorous, The minimum thickness is 0.5 mtr encountered in bore hole no. BH/08 and maximum thickness is 68 mtrs encountered in bore hole no.DTR/113. d. Blue Dust/ Powdery Ore It is fine grained iron rich ore having grayish in colour. The southern part of Daitari Iron Ore Mine between -250N to -450N hosts the Blue Dust/powdery ore. The minimum thickness is 3.80 mtr encountered in bore hole no. DTR/19 and maximum thickness is 18.40 mtrs encountered in bore hole no.DTR/125. e. Laterite/ Lateritic Ore

Laterite/Lateritic Ore is predominantly hosted by Sindurimundi area between -2000E to -1200E. The minimum thickness is 0.5 mtr encountered in bore hole no. BH/74 and maximum thickness is 16.50 mts encountered in bore hole no.BH/17.

2A.1.4.4 : Mode of Occurance & Controls of Mineralization

The localization and formation of various types of iron ores, their thickness and grade variations impart a combination of lithological, paleoclimatic and structural controls. On the basis of field disposition and broad composition of different members, the BIF in the study area can be classified broadly in to following three categories. (i) Banded Hematite Jasper: BHJ is red / buff in color and show distinct banding. Often the bands are gradational. The jasper and hematite are more or less similar in thickness. Such litho units are predominantly seen in this area. (ii) Banded Chert / Ferruginous Chert: The exposures of Banded Chert/ Ferruginous Chert are seen in this area. Often banding is recognized by the fine color difference. They are very poor in iron content. (iii) Banded Hematite Shale (BHS): The Banded Ferruginous Shale is often overlain by banded hematite jasper. This unit is characteristically banded with iron minerals and shale. This is locally called as transitional ore. It is persistently noticed throughout the iron ore mines. In this unit the banding is thinner and sharper than that in BHJ. (iv) This kind of shale is mapped in the quarry area and is mostly light green or brown in colour and hard in nature. Otherwise such litho unit is explored under the iron ore strata during borehole drilling and is a may be devoid of mineralization in further depths. (v) Laterites: Most part of the area is covered by laterite of various types. The laterites have been developed mostly over the shale unit of the area and depending upon the composition of the shale, different types of laterites have been developed. Ferruginous laterite occupies most of the high lands in the vicinity and is wide-spread.

2A.1.4.5 : Extent of Weathering/ Alteration

It is difficult to inherent that banded iron-formation (BIF) to produce representative information. The qualiative effects of weathering in BIF, and the progressive stages that lead to iron enrichment are not hard to follow, but to establish even semi-quantitative data is difficult. In general, the range of minerals found in BIF is not large. Even with the variation imposed by metamorphism, it is possible to limit discussion to a handful of mineral groupsilica, iron oxides and silicates.

2A.1.4.6 : Nature/Form of Mineral	Lump
Specify If any other	Friable, The ratio of lumps to fines is 40:60.

2A.1.4.7 : Extent of Mineralization

Iron ore is associated with the following litho units and covers about 65 to 70 percent area. The rocks bearing iron ore are of various types are as follows, Soft Laminated Ore (SLO)/ Friable Ore Soft Laminated Ore (SLO)/Friable Ore (FO) is the predominant ore type. Approx. 60 percent of the total reserve comprises of SLO/Friable Ore. At several places a still softer variety of ore can be seen (exposed around CS 700 S) which is termed as the biscuit type of ore. Hard Laminated/ Hard Massive Ore The northern part of the deposit is dominated by hard laminated and hard massive variety of ore. Around 20 percent of total daitari deposit is of Hard Laminated type ore. A crude linear contact can be inferred between the hard massive/laminated ore and the soft laminated/biscuit type of ore. Limonise/ Limonitic Ore The north western part of the mines (00 N/-250 E) hosts a predominantly limonitic ore zone which indicates the proximity of multiple fault zones causing limonitisation to a deeper level. Around 5 to 8 percent ore is of limonite/limonitic ore in the deposit. Blue Dust/ Powdery Ore It is fine grained iron rich ore having grayish in colour. It constitutes around 2 percent of the Daitari iron ore Mines. The southern part of Daitari Iron Ore Mine between -250N to -450N hosts the Blue Dust/powdery ore. Laterite/ Lateritic Ore Laterite/Lateritic Ore is predominantly

located by Sindurimundi area between -2000E to -1200E. It is around 7 to 10 percent of the total deposit. Shale Variety of shale incl. Ferruginous shale, Tuffaceous Shale, Carbonaceous Shale, Brown Reddish Shale etc. are present in the area. It is predominant in the Sindurimundi area.

2A.1.4.8 : Deposit Type (as per MEMC Rule)
The ore bodies of Daitari ML area are intra BIF and broadly parallel to bedding and form massive to laminated ore deposits.As per Mineral (Evidence & Contents)Rule2015, the Daitari deposits belongs to banded stratiform and tabular deposit of regular habit.

Sl.No.	Sample ID	Minerals	Radical with garde in %	Name of Agency	Type of agency	Attachment
1	Core Sample DTR/132 to DTR/583	HEMATITE	Fe: 6.22 to 60.06, SiO2: 0.11 to 79.29, Al2O3: 0.14 to 50.30, P: 0.009 to 1.105, S: 0.001 to 0.2394.	M/s SUPCO Of India (P) Ltd.	NABL accredited	1_Collar_Survey_Assay_Geology.xlsx

* Chemical analysis of core /non core samples may be uploaded in CSV file which shall normally include Five files namely collar file, survey file and Geology log file, Assay file & RQD File.

2A.2.1.11: Petrology & Mineralogical Studies

Sl.No.	Type of Sample	Number of Sample Drawn	Number of Sample Analyzed	Petrographic Study Report
1	Nil	0	0	Nil

2A.2.1.12: Beneficiation Studies

Sl.No.	Type of Beneficiation	Number of Samples	Attach
1	Nil	0	Nil

2A.2.1.13: Bulk Density Study as per M(EMC) Rules, 2015 and SOP of CGPB

Method adopted for calculating bulk density of ore and waste
No Bulk Density has been carried out during plan period.

Sl.No.	Nature of Ore/OB	Mineral	Number of samples	Bulk Density Established (t/m³)
1	NA	NA	NA	0.00

2A.2.1.14: Area Covered under Exploration

Level of exploration	Area in Ha.		Total Area in Ha.
	Forest	Non Forest	
G-1	60.111200	0.000000	60.111200
G-2	103.286300	0.000000	103.286300
G-3	0.000000	0.000000	0.000000
G-4	683.002000	171.909000	854.911000
Area proved as Non-mineralized	0.000000	0.000000	0.000000
Area to be explored	683.002000	171.909000	854.911000
Total	846.399500	171.909000	1018.308500

2A.2.2: Summary of The Previous Exploration (Before Last Plan Period)

Name of The Agency
Indian Bureau of Mines, Odisha Mining Corporation Ltd, Maheswari Mining Corporation

2A.2.2.1: Geological Mapping

Sl.No.	Year		Scale	Area Covered (Ha)
	From	To		
1	01/04/1962	30/06/2022	1:2000	1018.31

2A.2.2.2: Airborne Geophysical Survey

Sl.No.	Type of Beneficiation	Number of Samples	Attachment
1	Nil	0	Nil

2A.2.2.13: Bulk Density

Sl.No.	Rock Type	Number of Samples	Minerals	Bulk Density Established (t/m^3)
1	Lateritic Iron Ore (LIO)	1	Fe	2.50
2	Limonitic Ore (LIMO)	1	Fe	2.50
3	Ore with Shale (ORS)	1	Fe	2.50
4	Goethite	1	Fe	2.50
5	Soft Laminated Ore (SLO)	1	Fe	3.20
6	Powdery Ore	1	Fe	3.20
7	Hard Laminated Ore (HLO)	1	Fe	3.50
8	Hard Massive Ore (HMO)	1	Fe	3.50

2A.2.2.14: Area Covered under Exploration

Level of exploration	Area in Ha.		Total Area in Ha.
	Forest	Non Forest	
G-1	60.1112	0.0000	60.1112
G-2	103.2863	0.0000	103.2863
G-3	0.0000	0.0000	0.0000
G-4	683.0020	171.9090	854.9110
Area proved as Non-mineralized	0.0000	0.0000	0.0000
Area to be explored	683.0020	171.9090	854.9110
Total	846.3995	171.9090	1018.3085

Sl.No.	Year		Area converted to G1 from G2, G3 & G4	% increase in G-1 Area	Remaining Area % in G2	Remaining Area % in G3	Remaining Area % in G4	Remaining Area in G2	Remaining Area in G3	Remaining Area in G4
	From	To								
1	30/06/2022	30/06/2024	0.00	0.00	0.00	0.00	0.00	103.29	0.00	854.91
Potentially Mineralised area (Ha)										163.40

2A.2.3 Ore Body Geometry & Grade

Sl.No.	Name of the ore hand	General Strike / Trend	Dip Of Mineral Body	Average Strike Length (m)	Average Width (m)	Chemical parameters				
						Average Depth (m)	Name of the radical	Min Grade (%)	Max Grade (%)	Avg Grade (%)
1	Hilltop iron ore deposit	NW-SE	SW	1500.00	350.00	250.00	Fe	45.03	69.70	62.45
2	Sindurmundi iron deposit	E-W	S	1650.00	100.00	100.00	Fe	45.77	68.48	56.42

2A.2.4: Reserve / Resource Estimation Method

2A.2.4.1: Methodology

Resource / Reserve Estimation Method
Sectional Area Method
Methodology
Minerals (Evidence of Mineral Contents) Rule 2015 came into effect on 17th April 2015. As per Minerals (Evidence of Mineral Contents) Rule 2015, lateral extension of the mineral continuity shall be limited to a distance of 50% of the borehole spacing & depth continuity of G1 & detailed G2 category mineral resource shall be limited up to the depth of evidence of established mineral evidence. Accordingly, geological cross-sections have been modified & re-assessment of the balance geological & balance mineable reserve has been carried out considering above factors. A fresh estimate has been made on the basis of all the boreholes drilled till date using state of the art mining software i.e. 'SURPAC' at 45% Fe cut off and the resources/ reserves figures have been established as per the guidelines of UNFC.

2A.2.4.2: Resource Calculation

Sl.No.	Cross Section/Block	Section Area/ Block Area(sq mt)	Influence(m)	Depth in mtr	Volume (m^3)	Bulk Density (t/m^3)	Resource Quantity (t)	Level of Exploration	Type of Land	Name of the radical	Grade (%)	Method used for resource estimation

2A.2.4.3: Mineral Resource Estimate for Conversion to Mineral Reserve

Mineral resources estimated purely based on level of exploration. For the calculation of ore reserve the following parameters have been considered. a) Shape, size and continuity of ore zone, as plotted in the Geological Plan and sections. b) The depth extension of ore zone is plotted precisely in all Geological sections both cross-section and Longitudinal sections for the calculation of resource separately. c) Based on the past experience and field observation data of mine working the resource have been estimated. d) The threshold value has been considered as per the IBM guidelines is 45% Fe. e) The Cutoff grade considered for estimation of resource/reserve is 45 % Fe. (f)Updated pit position as on 30.06.2024. (g)Borehole collar, survey, assay & litho data from exploration. (h)Pit exposures data & Ultimate Pit. (i) The influence of the ore body has been taken @50 mtrs on either side of the grid along the strike of the bore hole drilled. No extrapolation of the ore section has been done beyond 50mtrs. (j)The depth continuity of mineralization has been considered limited to the depth up to which direct evidence of mineralization is established. (k)The lateral extension has been considered for resource assessment depending on geological continuity by mapping and has not been more than 50 mtrs of the probe point. (l)Entire data has been transferred to create a geological database in an ore body modeling software namely 'SURPAC'. (m)Bulk density of individual ore types has been used as a tonnage conversion factor (TCF) in this document. The bulk density considered in this report has been taken from the exploration report of OMC & carried out by NABL accredited Laboratory. ((n) In total, deposit wise 50 nos. of cross sections have been prepared for estimations of resource.

2A.2.4.4: Threshold value & Cut off Parameters

i) The threshold value has been considered as per the IBM guidelines is 45% Fe. ii) The Cutoff grade considered for estimation of resource/reserve is 45 % Fe.

2A.2.4.5: Mining Factors or Assumptions

The Daitari Iron Ore Mines comes under Category-A (fully mechanized opencast category)as per the IBM guidelines with present EC capacity 6.00 MTPA Iron Ore. The deposit is being worked by mechanized opencast mining method engaging HEMM & deep hole blasting. The maximum bench height has been kept 10 mtr and width 15-20 mtr with average bench slope of 700-800. Drilling is carried out by 115-150 mm drill machine &controlled blasting is being carried out with use of NONEL to control ground vibration & optimization in blasting. After blasting, the blasted ROM is feed to crusher& screen AT OHP for further sizing to CLO (10-40mm) and fines (-10 mm). The output is sent to designated stock yard for further selling in domestic near by states.

2A.2.4.6: Metallurgical Factors or Assumptions

The mine is supposed to produce calibrated lump ore (+10 to -40mm) size fraction & fines ore (-10 mm) size fraction for its dispatch to different sponge Iron Plant /steel plants having Final Submitted on Fe % in the range of 145 %.

2A.2.4.7: Cost & Revenue Factors

The entire ore production including lumps and fines produced from Daitari Iron Ore Mines will be sold to iron ore consumers of Odisha and nearby states. To meet market demand with about +45 %. Fe the ore produced can be sold after processing i.e. sizing and sorting. To meet market demand with +45 %. % Fe, both Iron ore +55% Fe and Lateritic Ore of +45 to 55% Fe will be proposed to be blended suitable to make it saleable. The Cash Flow analysis, NPV and IRR projected for the 10 years has been shown in the above table. As NPV is positive and IRR is around 68%, so the project is an economic viable proposition.

2A.2.4.8: Market Assessment

The entire ore production including lumps and fines produced from Daitari iron Ore Mines will be sold to iron ore consumers of Odisha and nearby states. To meet market demand with about +45 %. Fe the ore produced can be sold after processing i.e. sizing and sorting. To meet market demand with +45 %. % Fe, both Iron ore +55% Fe and Lateritic Ore of +45 to 55% Fe will be proposed to be blended suitable to make it saleable. Market demand is there for both fines (<10 mm) and lump which are produced from the mines. If required the ore of Fe% 45 to 55 will be sold directly in market as per demand.

2A.2.4.9: Other Modifying Factors

Public acceptance: The mining project has been well accepted by the public have so far been provided by the lessee. Government factors: Lease deed for Daitari lease was executed on 27.01.1966 for a lease area of 1812.99 Ha for a period of 30 years. Copy of lease deed for Daitari lease is enclosed at annexure 6. Subsequently, application for 1st RML was made on 09.02.2006. Copy of Form D & Form J for 1st RML of Daitarilease is given at annexure 8. Application for 2nd RML was made on 14.11.2012. Copy of Form D & Form J for 2nd RML of Daitarilease is given at annexure 9. As per Rule 3 (2) of Mineral (Mining by Government Company) Rules, 2015, the lease is deemed to be valid till 29.11.2033. Application for extending the validity of lease has been made to Dy. Director of Mines, Govt. of Odisha vide letter no. 15800/OMC/GS/2017. Copy of the letter is enclosed at annexure 10. Copy of lease extension letter from state Govt. is enclosed as annexure 7. The Present Ec capacity of the mine is 6 MTPA. National Park: There is no National Park within 10 km radius of the ML area. Rights and Ownership: The entire area of 1018.3085 Ha. Daitari Iron Ore Mines in Village Talapada, under Harichandanpur Tahasil of Keonjhar district of Odisha state has been granted to OMC Ltd. The validity of lease period is upto 26/01/2036 . Infrastructure: Basic Infrastructure is available in the mine to facilitate the workings. They are mine office, work shop, garage, rest shelter, first aid station, fire fighting stations, site Stores, VT centre, Time office, canteen, laboratory, welfare centre, post office etc.

2A.2.4.10: Classification

i. Borehole spacing within 50x50 & 50m x 100m on a grid pattern has been considered as G1 category under 331 as per UNFC code and Borehole spacing more than 100m X 100m & less than 200m x 200m grid interval has been considered as G2 category under 332 as per UNFC code. ii. Geological mapping has been done in 1:2000 scale. iii. Detailed three-dimensional delineation of an ore body has been achieved though sampling, pit mapping etc. and relevant characteristics of the deposit are established with high degree of accuracy using software.

2A.2.4.11: Calculation of blocked resources

Sl.No.	Year	Type of Sample	Number of Samples Proposed
1	2025-2026	Mineral	10
2	2025-2026	Waste	5

Chapter 2B : Geology & Exploration UG : NA

Chapter 3: Mineral Beneficiation / Processing

Name of The Ore/Mineral	Hematite

3.1: Mineralogy of the ROM ore/ Mineral

Sl.No	Valuable Mineral Name	Approx. Mineral %	Gangue Mineral/s name	Approx. Mineral Gangue %
1	Iron ore Fe	90.2100	BHC BHJ Laterite	9.7900

3.2: Complete Chemical Analysis of the ROM Ore/Mineral

Sl.No	Radical	Wt%
1	ROM LUMP	Nil
2	Fe	63.0500
3	Sio2	1.2800
4	Al2O3	2.2000
5	LOI	5.4200
6	CaO	0.2100
7	MgO	0.1500
8	P2O5	0.1680
9	SO2	0.0190
10	Na2O	0.0610
11	K2O	0.0470
12	ROM FINES	Nil
13	Fe	60.9400

14	Sio2	1.9300
15	Al2O3	3.2400
16	LOI	6.6700
17	CaO	0.2800
18	MgO	0.1900
19	P2O5	0.2040
20	SO2	0.0270
21	Na2O	0.0820
22	K2O	0.0680

3.3: Crushing Section

3.3.1: Primary Crushing

Sl.No	Type of Crusher	Make	Capacity of Crusher(tph)	Feed Size(mm)	Product Size(mm)
1	Jaw Crusher	METSO/ Sandvik/ Terex/ Puzzlano (may change as per suitability and availability)	700	-1000.0000	-250.0000
2	Jaw Crusher	METSO	800	-1000.0000	-250.0000

3.3.2: Secondary Crushing

Sl.No	Type of Crusher	Make	Capacity of Crusher(tph)	Feed Size(mm)	Product Size(mm)
1	Cone Crusher	Metso	650	-250.0000	-60.0000
2	Cone Crusher	Metso	400	-250.0000	-60.0000

3.3.3: Tertiary Crushing

Not Applicable

3.4: Grinding Section

3.4.1: Dry Grinding

Not Applicable

3.4.2: Wet Grinding

Not Applicable

3.5: Dry Processing

3.5.1: Screening and Classification

Sl.No	Type of Screen/Classifer	Stages	Make	Capacity(tph)	Aperture Size of Screen/Classifier (mm), if applicable	Feed Size(mm)	Product (mm)	Product Quality(if applicable)
1	grizzlyscreen	Single	Metso	1250.0000	150.0000	-1000.0000	-150.0000	>45 % Fe
2	Doubledeck screen	Multiple	Metso	700.0000	60.0000	-150.0000	-40.0000	>45 % Fe
3	grizzlyscreen	Single	METSO	800.0000	150.0000	-1000.0000	-150.0000	>45 % Fe
4	Doubledeck screen	Single	METSO	800.0000	40.0000	-250.0000	-40.0000	>45 % Fe

3.5.2: Other Operations

Not Applicable

3.5.3: Product Quality

Products	Wt%	In Tonnes	Size (Range) mm	Complete chemical analysis
Concentrate	100.0000	6000000.0000	+10 MM to -40 mm & -10mm	Fe% 46.48 SiO2% 17.12 Al2O3% 8.37 P% 0.109
Sub-grade	0.0000	0.0000	Nil	Nil
Rejects	0.0000	Nil	Nil	Nil

3.6: Wet Processing

3.6.1: Scrubbing / Washing

Sl.No	Type of Scrubbers / washers	Stages, if applicable	Make	Capacity(tph)	Feed Size(mm)	Product Size (mm)	Product Quality, if available	Water Requirement(l/h)	Fresh Water Requirement (l/h)	Recirculated Water (l/h)
1	NA	Nil	NA	Nil	Nil	Nil	Nil	Nil	Nil	Nil

3.6.2: Screening and Classification

Sl.No	Type of screen / classifier	Stages, if applicable	Make	Capacity(tph)	Aperture Size of Screen/Classifier (mm), if applicable	Feed Size(mm)	Product Size (mm)	Product Quality, if available	Water Requirement(l/h)	Fresh Water Requirement (l/h)	Recirculated Water (l/h)
1	NA	Nil	NA	Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil

3.6.3: Gravity Separation

Sl.No	Type of separators (jig, table, spiral, etc.)	Stages, if applicable	Make	Capacity(tph)	Feed Size(mm)	Product (Conc) (tph)	Product-Mid (tph), if available	Product-Tail (tph)	Water Requirement(l/h)	Fresh Water Requirement (l/h)	Recirculated Water (l/h)
1	NA	Nil	NA	Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil

3.6.4: Magnetic Separation

Sl.No	Type of magnetic separators (magnetic intensity)	Stages, if applicable	Make	Capacity(tph)	Feed Size(mm)	Product-Mag (tph)	Product-Mid (tph), if available	Product non-Mag (tph)	Water Requirement(l/h)	Fresh Water Requirement (l/h)	Recirculated Water (l/h)
1	NA	Nil	NA	Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil

3.6.5: Flotation

Sl.No	Type of flotation equipment (froth/ column)	Stages (rougher/ cleaner, etc), if applicable	Make	Capacity(tph)	Feed Size(mm)	Product-Float (tph)	Product non-Float (tph)	Water Requirement(l/h)	Fresh Water Requirement (l/h)	Recirculated Water (l/h)
1	NA	Nil	NA	Nil	Nil	Nil	Nil	Nil	Nil	Nil

3.6.6: Other Operations

Sl.No	Type of equipment / operation	Stages, if applicable	Make	Capacity(tph)	Feed Size(mm)	Product-Conc (tph)	Product-Mid (tph), if available	Product-Tail (tph)	Water Requirement(l/h)	Fresh Water Requirement (l/h)	Recirculated Water (l/h)
1	NA	Nil	NA	Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil

3.6.7: Product Quality (wet processing)

Products	Wt%	In Tonnes	Size (Range) mm	Complete chemical analysis
Concentrate	Nil	Nil	Nil	NA
Sub-grade	Nil	Nil	Nil	NA
Rejects	Nil	Nil	Nil	NA

3.7: Overall Product Quality (Dry cum Wet Processing)

Products	Wt%	In Tonnes	Size (Range) mm	Complete chemical analysis
Concentrate	100.0000	6000000.0000	+10 MM to -40 mm & -10mm	Fe% 46.48 SiO2% 17.12 Al2O3% 8.37 P% 0.109
Sub-grade	0.0000	0.0000	Nil	Nil
Rejects	0.0000	0.0000	Nil	Nil

3.8: Disposal Method for tailing/ rejects

a) Explain the disposal method for tailing or reject from processing plant with detail chemical / mineral analysis of tailing	Nil
b) Size and capacity of tailing pond, toxic effect of such tailings, process adopted to neutralise its effect (if any)	Nil
c) Any other data (if available)	Nil

3.9: Overall water requirement of mining and mineral processing

Indicate quantity, source of supply, disposal of water and extent of recycling and chemical analysis of water	Water balance chart_Daitari Mines.pdf

3.10: Flow sheets and charts

Material balance chart of mineral processing plant(s) (each stage of process)	Material_balance_chart.pdf
Attach flow sheet of beneficiation of plant(s)	Process_Flow_Chart.pdf
Any other data (if applicable)	Nil

Chapter 4A: Mining Operations

4A.1.1: Existing Method of Mining		Mechanized		
Choose one or more	Combination of loaders and tippers	HEMM with deephole drilling	None	None
4A.1.2: Proposed Method of Mining		Mechanized		
Choose one or more	Combination of loaders and tippers	HEMM with deephole drilling	None	None
Reasons for Proposed Changes		Daitari Iron Ore Mines comes under Category A fully mechanized opencast Mines present EC capacity 6 MTPA The deposit is being worked by mechanized opencast mining method engaging HEMM deep hole blasting The maximum bench height has been kept 10 mtr and width 23 mtr with average bench slope of 75 degree Drilling is carried out by 115 mm drill machine controlled blasting is being carried out with use of NONEL to control ground vibration		

4A.2: Operational Parameters

4A.2.1: Inventory of Existing Pits & Dumps

4A.2.1.1: Pits

Sl.No.	Pit ID	Pit Status	Area Covered by Pit(Ha)	Pit Dimensions(L*W*D)
1	Hilltop	Active	40.9000	1477 x 277 x 60

4A.2.1.2: Dumps and Stacks

4A.2.1.2.1: Dump Details

4A.6: Man Power Deployment

4A.6.1: Managerial

Sl.No.	Particular	Number of Persons in Shift 1	Number of Persons in Shift 2	Number of Persons in Shift 3	Number of Persons in General Shift	Total No. of Persons per day
1	1st Class	1	1	1	3	6
2	2nd Class Manager	1	1	1	1	6
3	Mining Engineer	0	0	0	1	1
4	Geologist	1	1	1	1	4
5	Mechanical Engineer	0	0	0	1	1
6	Electrical Engineer	0	0	0	1	1
7	other	0	0	0	1	1

4A.6.2: Supervisory

Sl.No.	Particular	Number of Persons in Shift 1	Number of Persons in Shift 2	Number of Persons in Shift 3	Number of Persons in General Shift	Total No. of Persons per day
1	Foreman	3	3	3	2	11
2	Mine mate	5	5	5	2	17
3	Blaster	0	0	0	3	3

4A.6.3: Skilled Workers / Operators

Sl.No.	Particular	Number of Persons in Shift 1	Number of Persons in Shift 2	Number of Persons in Shift 3	Number of Persons in General Shift	Total No. of Persons per day
1	Operator	10	10	9	1	30
2	Dumper Operator	25	25	25	5	80
3	Pump Operator	0	0	0	0	0
4	Technician	10	10	9	1	30
5	Drill Operator	2	2	2	0	6
6	Dozer/Grader Operator	1	1	1	0	3
7	Other	0	0	0	1	1

4A.6.4: Semi-skilled Workers

Sl.No.	Number of Persons in Shift 1	Number of Persons in Shift 2	Number of Persons in Shift 3	Number of Persons in General Shift	Total No. of Persons per day
1	18	18	18	4	58

4A.6.5: Unskilled Workers

Sl.No.	Number of Persons in Shift 1	Number of Persons in Shift 2	Number of Persons in Shift 3	Number of Persons in General Shift	Total No. of Persons per day
1	36	36	0	8	80

4A.6.6: Others Specify

Sl.No.	Particular	Number of Persons in Shift 1	Number of Persons in Shift 2	Number of Persons in Shift 3	Number of Persons in General Shift	Total No. of Persons per day
1	Nil	Nil	Nil	Nil	Nil	Nil

4A.6.7: No of Persons Engaged Per Day

Sl.No.	Number of Persons in Shift 1	Number of Persons in Shift 2	Number of Persons in Shift 3	Number of Persons in General Shift	Total No. of Persons per day
1	113	113	75	38	339

No of Shifts per Day ((A) = Machine Requirement Summary (B))	3
Average Daily Employment per Shift ((B) = (Total Number of Person per Day) / (A))	113
Material to be Handled per Shift ((C) = Machine Requirement Summary (E))	8666

4A.6.8: Supervision

Sl.No.	Particular	Qualification	Requirement / Proposed	In Position / Existing Strength	(Requirement / Proposed) - (In Position / Existing Strength) = (-) Shortage / (+) Excess	Remarks
1	Assistant Manager	BE Mining/1st Or 2nd Class Mine Manager Certificate Of Competency	6	5	1	Ok
2	Geologist	Msc Geology	4	3	1	Ok
3	Mines Manager	1st Class Mine Manager Competent	6	5	1	Ok
4	Mining Engineer	BE Mining	1	1	0	Ok
5	Mine Foreman	Diploma In Mining	11	11	0	Ok
6	Mining Mate	Diploma In Mining	17	17	0	Ok

4A.7: Waste Management

4A.7.1: Existing Dump

Sl.No.	Year	Dump Id	Type of Dump	Proposed	Height (m)	Latitude (ddmmss.ss)	Longitude (dddmmss.ss)	Total Dump	Existing

				Area (ha)		From	To	From	To	Quantity (m³)	Dump Location

4A.8: Mineral Waste Handling To Utilize As Minor Mineral

Sl.No.	Year	Dump ID	Type of Dump	Proposed Area (ha)	Quantity Handled (t)	Quantity Recovered (t)	Name Of Minor Mineral	Alternative Waste Utilization (m^3)
1	Nil	NA	Nil	Nil	Nil	Nil	Nil	Nil

4A.9: Use of Minerals

Sl.No.	Proposed Use Of Mineral	Name Of Mineral	Relevant Use Of Mineral	Physical Specifications	Chemical Specifications
1	Direct Selling	IRON ORE	Steel plant	+10mm to -40mm lump ore	+45% Fe,3% Al2O3 3% SiO2 +60% Fe,Al2O3 3%,SiO2,3%
2	Direct Selling	IRON ORE	Steel plant	-10mm fines ore	+45% Fe, Al2O3 3% SiO2 +60% Fe,Al2O3 3%,SiO2,3%

* Choose among these:

1. Captive use in own industry

2. Direct Selling

3. Selling Post-Beneficiation /Up-gradation

*Select more than one, if applicable

Chapter 4 B : Mining Operations UG : NA

Chapter 5: Sustainable Mining

5.1: Sustainable Mining and SDF Implementations in Compliance of Rule 35 of MCDR'2017

A multi disciplinary SDU committee formed consisting of Mines manager as chairman, all sectional representatives , CSR consultant and representative of raising agency. It's a full time committee. The functioning of SDU committee is monitored at company level with Apex SDF committee.Supplied drinking water through water tanker, Reparing of exsting drinking water structure and pipeline supply, Digging of community pond and Check Dam, for villagers for irrigation purpose. Reparing of exsting drinking water structure and pipeline .Organised need based stakeholders meeting for addressing different issues and bring better decision and solution. Free helth chekup with free medicin for villagers through 24 hrs Dispensary . Conducting periodical village health check up camp in all PD villages along with medicine support. Conducting swachhata programme in and out of mines for ensuring cleanness and mass awareness.Organizing different skill mela for identifing local youth and making aware about the different training scope available and enrolled them in different training institute .Provide bus services to local school children for better education and development different school, anganwadi infrastructure for the local students. Support financial assistance to diferent local village level institute for organizing different festival and cultural activities. 2- Organize different sports tournamnets for local youths. Construction of CC Road for public transport facilities with drainage facilities. Thus Compliance of Rule 35 of MCDR'2017 of self assessment of star rating has been ensured.

Chapter 8: Review of Previous Proposals (Not applicable for fresh grant)

8.1: General

8.1.1: Lease Area Utilization

Sl. No.	Type of land use (in ha)	Area at the beginning of the proposal period	Area proposed under activity	Actual Area utilized in the proposal period	Deviation	Reasons for deviation
1	Mining	40.90	10.69	0.00	-10.69	The production achieved during last plan period was less due to partial-availability of EC for 6 Million tonnes. The EC for rest period was for 3 million tonnes. So due to less production there was less development of quarry. The quarry development was confined within the existing pit of the last plan period i.e. 40.9 Ha.
2	Mineral storage	0.33	0.00	0.00	0	No proposal given as the area covered under existing mineral stock area.
3	Mineral Beneficiation plant	10.66	0.00	0.00	0	Nil
4	Township	0.00	0.00	0.00	0	Nil

F. No. 1-99/2019-ADG (EM)/IOM-DML(WL)-OMC/ICFRE/1101 Dated: 15.07.2024

To

The Chief Vigilance Office and Land Officer
Forest & Environment Section
Odisha Mining Corporation Limited (OMCL)
Govt. of Odisha, Bhubaneswar

Subject: Proposal for diversion of balance forest land of 746.3325 ha in favour of M/s. OMC Ltd. within total forest land of 846.3995 ha located within approved Mining Lease area of 1018.3085 ha for Iron Ore Mining in Daitari Mining Lease in Cuttack Forest Division of Jajpur District and Keonjhar (WL) Division of Keonjhar District, Odisha – reg.

Reference: Your office letter No. 10453/OMC/F&E/2024 dated 26.06.2024

Sir

With subject and reference as cited above, please find reply from the ICFRE pertaining to conditions no. iii and vii as under:

Condition No.	Condition	Reply from the ICFRE
iii.	A considered opinion on impact of mining operations on 28 rare, endangered and threatened species found in the area and mitigation measures proposed for their conservation and protection.	▪ Mining operation will lead to loss of habitat of 10 RET species reported from core zone. However, common occurrence of 09 species among these in buffer zone will provide habitat for their survival and sustenance. ▪ RET species- *Entada rheedei* only recorded from core zone is under threat due to loss of its habitat resultant from mining operation. Therefore, it is required to be protected through *ex-situ conservation*. A Species Specific Conservation Plan for this species is required to be prepared and implemented. ▪ Threat to 27 RET species has been suggested to be mitigated though *in-situ* conservation in Chapter-7, section 7.3.1.1 at page 417 of the final report-vol-I (*Annexure-I*).
vii.	The revised cost benefit analysis after	▪ A comparative account of ES&G losses

Contd.

Condition No.	Condition	Reply from the ICFRE
	accounting the EG&S lost and net economic gains from project to be submitted by the State.	under column I-IV for different scenarios of forest diversion (i.e. 248.647 ha, 317.541 ha, 746.33 ha and 1018.30 ha) area and benefits from enhanced iron ore production @ 6MTPA beside net economic gain/expected profit is given in Table- 5.8, Chapter-5, page 353 of the final report-vol-I (*Annexure-II*). Further ES&G losses in monetary terms for ICFRE suggested forest diversion (248.647 ha) in given at Column-I of the Table 5.8

Further, please feel free to contact this office for any further clarification in the matter. It is also requested to release the balance funds due in favour of the ICFRE at an early date please.

This is for information and needful.

Thanks

Yours faithfully,

Encl.- As above

(Dr. A. N. Singh) 15/07/24

Asstt. Director General (EM)

Copy to: DDG (Extn.), ICFRE for information.

As a result of various alternatives discussed in the report an area of 309.66 ha *i.e.*, 41.49% will be utilised against the OMCL applied diversion area (746.33 ha) and therefore 58.51% of forest area from the applied area will be available for maintaining the forest cover intact, if expansion is considered by MoEF&CC.

The area (309.66 ha) suggested by ICFRE for mining and allied activities for DIOM of M/s. OMCL have considerably contributed to reduction forest area applied for diversion and approved in the mining plan (2020-25). The area suggested to preserve intact within the core area of the mine lease area is documented with significant stand density (1753.19 ind./ha), 3.50 Shannon wiener index and significant number of RET species as compared to the proposed mine site will facilitate in maintain the forest cover in the core of the mine lease also part of proposed corridor Similipal and Saktosia. The proposed forest area to be preserved intact 613.05 ha (include 28.21 ha non-forest area) shall be made in association with the State Forest Department that fall both in Keonjhar Wild life Division and Cuttack Forest Division, also part of the proposed corridor has connectivity with the adjacent forest cover. The proposed forest area (613.05 ha) to be preserved will continue to provide the environmental service specific to the forest for the wellbeing of the dependants

7.3.1.1 Terrestrial flora

The Mining Lease Area (MLA) and its buffer zone is very important in view of its phytogeography and occurrence of Rare, Endangered and Threatened (RET) plant species. A total of 28 **RET plant species** were reported from the entire area *i.e.*, both in core and buffer areas. The RET plants are having conservation importance needs to be rehabilitated appropriately (*In-situ* conservation) within their natural habitat prior to initiation of mining and its allied activities in the proposed area.

7.3.1.2 Habitat protection

The abundance and diversity of animal species is largely dependent on the availability of suitable habitats and characteristic vegetation cover on which they depend for their various biological needs. The approved **Site-Specific Wildlife Conservation Plan** for Daitari iron ore mine with a total financial outlay of Rs. 2,410.015 Lakhs as on 16.08.2018 holistically dealt with the measures required for conservation of wildlife in Keonjhar Wildlife Division and Cuttack Forest Division. In addition, following are the specific recommendations for appropriate implementation to achieve additional safeguards to enhance the habitats for wildlife forms.

7.3.1.3 Terrestrial fauna (wildlife)

- The 11 km long conveyer belt that starts from Hill Top pit to Baliparbat Stockyad and passes through both the Talapada and Baliparbat beats of Keonjhar WL Division hampers the free movement of wildlife in the forest corridor connecting the Similipal and Satkosia Tiger Reserves. It is therefore recommended to raise the height of the conveyer belt to six to eight meters at the place of five to six meters as in draft report (changes made 6-8

Environmental Service Loss and Economic Benefit

Benefit analysis for proposed production enhancement from 3 MTPA to 6 MTPA to extract 168.668MT for 28 years using direct and indirect benefit expected to incurred were estimated using statistical data projecting cost escalation and Social Discount Rate (SDR). Environmental loss estimated for the forest area as comparative for the life of mine (28 years), the rotation period of the forest (64 years) and total (28+64=92 years) estimated for 1%,4% and 10% Social Discount Rate (SDR) are presented in Table 5.8. The value for the forest increases with the decrease in SDR.

Table 5.8: Comparative analysis of ecological service loss for the forest area and economic benefit perceived to be incurred for the enhanced production of iron ore 6 MTPA for DIOM, OMCL, Odisha

Ecological service loss monetary valuation for the forest area perceived to be lost due to mining					
No. of Years	SDC	Net Present Value (Rs. in crore) 248.647 ha	Net Present (Rs. in crore) 317.541 ha	Net Present Value (Rs. in crore) 746.33 ha	Net Present Value (Rs. in crore) 1018.3* ha

Compliance to Point No. viii raised by MoEFCC, Govt. of India vide letter No. B-28/2015 FC dt.17.05.2024 regarding Comment on the economic feasibility of mining operations over reduced area for Iron Ore Mining in Daitari Mining lease.

BACKGROUND:

In response to the observations of the Advisory Committee (AC) in its meeting dated 30.04.2024, regarding the economic feasibility of mining operations over a reduced area in this ecologically sensitive zone, the following submissions are respectfully furnished:

The proposal has been carefully re-evaluated in light of ICFRE's recommendations and the AC Sub-Committee's suggestions for further area reduction. While fully appreciating the conservation imperatives of this pristine landscape, our technical analysis demonstrates that sustainable mining remains viable within the revised parameters. Below we present: (1) a detailed feasibility assessment of the reduced operational area, (2) chronological sequence of reduction of the Mining area and (3) economic safeguards to maintain project viability.

ICFRE's carrying capacity study has comprehensively assessed the impacts of area reduction through a comparative analysis of three alternative scenarios alongside a Business-as-Usual case, applying sustainable development principles to minimize environmental, forest, and socioeconomic effects. This evaluation was based on the mining plan approved with an area of 992.2904 Ha. out of 1018.3085 Ha. earmarked for mining and allied activities during the plan period of 2016-17 to 2019-20, which was revisited for reduction initially to confine mining and allied activities within 488.64 Ha. during the subsequent plan period 2020-21 to 2024-25 and further reduced to 405.26 Ha. in the current plan period i.e. 2025-26 to 2029-30 based on the resource/reserve data as of 30-06-2024. The economic viability assessment for the reduced area is based on multiple critical factors e.g. mining technology (including HEMM fleet configuration and mechanization scale), safety parameters, statutory mining regulations, plan modifications, and updated reserves as reflected in the currently approved mining plan.

PART-I (BASED ON MINERALIZATION STATUS)

As of 30-06-2024, Daitari Iron Ore Mines (DIOM) has established mineralization across 163.40 Ha (16.04% of ML area), with G1 (60.11 Ha.) and G2 (103.29 Ha.) reserves, while the remaining 854.91 Ha. (i.e 83.96% of ML) remains in G4 reconnaissance stage. Total resources stand at 176.58 million tonnes (including 176.03 Mt probable reserves and 541,795 tonnes blocked below ultimate pit depth). Restricting mining to 240 Ha. would render 541,795 tonnes inaccessible due to depth constraints, causing projected losses of:

- **Revenue:** ₹270.57 crore (at ₹4,994/tonne sale value)
- **Royalty:** ₹37.88 crore
- **DMF:** ₹10.61 crore
- **NMET:** ₹0.76 crore

The current plan allocates 240 Ha. for mining, 138.16 Ha. for dumping, and 27.10 Ha for utilities, whereas only 163.40 Ha. has proven resources. Without full exploration, the economic impact of further area reduction remains unquantifiable—especially since deeper extraction requires lateral expansion for bench development and also the Sindurmundi deposit divided into two sections - the western **Sindurmundi I** (approximately 800m long) and eastern **Sindurmundi II** (about 1000m long) – features a structural disturbance zone with four distinct faults, with a depth persistence reaching about 250m for both Sindurmundi deposits and approximately 300m for the Hill Top deposit.

The current mine configuration (proposing 240 Ha operational area) demonstrates strong economic viability, as evidenced by the 10-year cash flow analysis in the PFR showing a positive NPV and robust IRR of approximately 68%. These financial metrics confirm the project's commercial feasibility at the proposed scale, while also indicating that any further area reduction would jeopardize this viability. (**Pre-feasibility report Attached**).

PART-II (CHRONOLOGY OF AREA REDUCTION)

The mining lease was originally granted for 1,813 ha (7 sq. miles) to OMC in 1965. Following GSI's assessment, 794.68 ha of non-ore bearing land was surrendered, retaining 1,018.31 ha.The current proposal seeks diversion of 746.33 ha forest land (95.6 ha already diverted in 2005). As per MoEFCC directives, 112 ha has been conserved as a wildlife buffer (OMC undertaking dated 16.02.2018).

ICFRE's recommendations have optimized operations:

- Mining area reduced from 569.56 ha to 240 ha
- Dump area decreased from 280.47 ha to 138.16 ha.
- Total operational footprint cut from 992.29 ha to 405.26 ha

PART-III (COMMENT W.R.T ALTERNATIVES ASSESSED BY ICFRE)

1. **Business As usual Scenario: Mining confined to Hill Top deposit -Within broken up area of 79.18 ha. out of 95.6 ha. with maximum working depth of 690 MRL**
   - Net Reserve:115 M (Accessible Reserve: 25.01 MT& Blocked Resource ~90 MT)
   - Mine Life @ 6 MTPA: 4 years,
   - No generation of OB thus no additional land required.

2. **ALTERNATIVE-1: Mining confined to Hill Top deposit (both North pit as well as south pit) - Within broken up area of 79.18 ha. with max. working depth of 620 MRL and sequential mining, one pit at a time**
   - Net Reserve:115 M (Accessible Reserve: 53.65 MT& Blocked Resource ~62.15 MT)
   - Mine Life @ 6 MTPA: 9 years,
   - OB Generation: 35.9 MT (to be backfilled thus needs rehandling)
   - Risks of higher operating costs (due dump rehandling) and potential ore-waste mixing during rehandling.

3. **ALTERNATIVE-2: Mining confined to Hill Top deposit (both North pit as well as south pit) - Hill Top Deposit – Development up to ore body bottom up to 510 MRL with simultaneous mining of both North pit deposit as well as south pit deposit.**
   - Net Reserve:115.781 MT (Accessible Reserve: 115.781 MT& Blocked Resource ~Nil)
   - Mine Life @ 6 MTPA: 19 years
   - Expansion of the pit from 79.18 ha. to 113.55 ha.
   - OB Handling:62.12 Mm^3 (Backfilling: 31 Mm^3; Dump: 31.12 Mm^3 over 78.09 ha.)

4. **ALTERNATIVE-3: Mining of three deposits simultaneously over 240 ha. (Hill Top deposit: 113.45 ha; Sindurmundi deposit 1: 56.92 ha; Sindurmundi deposit II: 69.63 ha.) and mining of both Hill top deposit and Sindurmundi deposit with provisions of blending lean float ores of sindurmundi deposit with the rich ore of hill top deposit.**

- Net Reserve:168.581 MT (Accessible Reserve: 168.581; Hill Top deposit (115.781 MT with 62.62% Fe); Sindurmundi deposit (52.8 MT with 56% Fe) (**Ref. Exploration status as of 2020**)
- Mine Life @ 6 MTPA: 28 years
- Net Reserve:168.581 MT (Accessible Reserve: 168.581; Hill Top deposit (115.781 MT with 62.62% Fe); Sindurmundi deposit (52.8 MT with 56% Fe) (based on **Exploration status as of 30-06-2024**)
- Net Reserve: 176.034MT (123.18 MT from Hill Top deposit + 52.85 MT from Sindurmundi deposit) with 541795 Tonnes (0.03 % of the total resources) will remain blocked below the ultimate depth of the mine.
- Area Requirement: 34.27 ha. for development of pit, 142 ha. for handling waste in two OB dumps.

The ICFRE study conclusively demonstrates that Alternative-III represents the most sustainable and economically viable option, enabling maximum mineral recovery of 176.034 MT while extending the mine life to 29 years at 6 MTPA production capacity. This extended operational timeframe allows for gradual environmental assimilation and significantly reduces the annual ecological footprint compared to shorter-life alternatives.

PART-IV (JUSTIFICATION FOR COMPONENT WISE LAND USE AS PER ALTERNATIVE-3)

The ICFRE-configured mining plan (approved by IBM) requires 248.65 ha of forest land out of the applied area for diversion over 746.33 ha, optimizing utilization while minimizing diversion. Component-wise breakdown is detailed in the Land Use Abstract at **Table.1 below**

Area Particulars	Forest		Non-Forest	Total
	Diverted	Proposed		
Area for excavation @ Hilltop	79.18	34.27	0.00	113.45
Area for excavation (Sindurmundi	0.00	69.63	0.00	69.63
Area for excavation (Sindurmundi	0.00	56.92	0.00	56.92
Sub Total	79.18	160.82	0.00	240.00
Waste Dump (Near Talapada) (PD-1)	0.00	3.78	60.16	63.94
Waste Dump (Near Old Magazine) (PD-2)	0.00	78.09	0	78.09
Existing Mineral Storage (already	9.96	0.00	0	9.96
Proposed Infrastructure (Conveyor +	0.00	2.80	0	2.80
Road (Proposed)	0.00	3.16	0.85	4.01
Existing Road (already diverted)	5.44	0.00	0	5.44
Existing Mineral Processing (already	1.02	0.00	0	1.02
Total	**95.60**	**248.65**	**61.01**	**405.26**
Statutory Barrier	0.00	12.00	1.28	13.28
Others	0.00	489.25	110.53	599.77
Grand Total	**95.60**	**749.89**	**172.82**	**1018.31**

Note: Total area required for mining & allied activities: 405.26 ha. (248.65 ha. (Forest) + 61.01 ha. (non-forest)+ 95.60 (diverted forest)

Component-1: Area Earmarked for mining (240.0 Ha):

- The land requirement for mining operations has been meticulously calculated based on comprehensive technical assessments of the ore body characteristics and operational necessities. The pit design is based on the presumptive continuity of the ore body within an influence zone 50-meter along confirmed exploratory borehole grid lines without any extrapolation, with mineralization depth and lateral extensions strictly limited to geologically proven evidence (capped at 50m from probe points). Detailed analysis of 50 deposit-specific cross-sections (including the latest exploratory borehole data established as of 30-06-2024), conforming to IBM's 45% Fe threshold, bench design parameters (as per IBM guidelines) at 10 mtr bench width and 80^{0}-90^{0} slope, the pit development was determined to beover151 ha.

- However, the Sindurmundi deposit (Structurally disturbed deposit) marked by fractured zones and four faults, displays erratic ore geometry across its western (800m) and eastern (1000m) segments, though maintains consistent mineralization to 250m depth. Similarly, the strike of the ore body swings between NNW-SSE and E-W with steep dip due west &

south. Superimposition of complex fold system and faults are evident from the BIF and associated rocks in Hilltop deposit as well.

- Given Only 16.04% of the total Mining Lease (ML) area (1018.3085 Ha) has been explored to date. Geological observations, including structural disturbances near the delineated ore body, indicate that economically viable mineralization may extend beyond the current Ultimate Pit Limit (UPL) boundary of 151 Ha. While this remains unproven, such extensions cannot be ruled out without further exploration. To prudently account for this uncertainty and ensure operational flexibility, a 40-meter peripheral buffer has been incorporated around the currently designed UPL boundary of 151 Ha (increasing the net area to ~190 Ha). This buffer provides the following advantages:
  - ✓ Accommodates potential lateral expansion (2–3 benches, 10–15m width) if future exploration confirms near-surface ore continuity.
  - ✓ Prevents costly mid-project pit redesigns, minimizing operational and environmental disruptions

- Further, in order contain the mining footprint confined to the core zone following additional measures have been conceptualised:
  - Securing the excavation pits as per Rule 26 of MCDR'2017 will cover an area of 10 Ha. (approx.)
  - Since the conceptual land use involves creation of a water reservoir over 94.22 ha.; therefore, requires a proper drainage system to channelise entire runoff till the pit and the same needs to be provided with a peripheral drainage system all along the pit periphery on the outer side to receive excess pit water in an unprecedented event with very heavy rainfall. Peripheral drainage system of 3-4 mtrs width with intermittent sumps all along the pit boundary over 8619 mtrs(**Ref. Fig.1**)will require around 5.1 ha. each for check dams/gabion wall and garland drains (@6 mtr width), around 27 ha will be required for logistic movement and other monitoring activities like wise an additional land of 40 ha. has been provisioned under this head making net area to be utilised under mining at 240 ha. (151 ha. (as per UPL)+38 ha. to accommodate future lateral expansion+ 8 ha for securing the excavation pits + 28 ha. for peripheral drainage system, check dams etc. +15 Ha Logistics & Monitoring (roads, safety berms, infrastructure).

Component-2: Area under Dumping (ICFRE Recommended Over 142.03 Ha.; Mining plan approved for 138.16 ha. with 3.87 ha. earmarked for Road networks)

- Based on the reserve base of 168.668 MT (established as of 2020), it is estimated that Overburden to the tune of 98.6 million m^3 will be generated @ Stripping Ratio of 1:0.58 (cum/tonne) with around 62.15 million $m^3$from Hill Top&36.45million m^3 from Sindurmundi; out of which around 46.47 million m^3 of waste will be backfilled at two proposed sites (30.0 million m^3 at Hilltop Pit & 16.46 milllion m^3 at Sindurmundi pit).
- In accordance with the mining safety parameters (regulating the development of waste dump), Two waste dumpswith a holding capacity of 52.13 million m^3 has been designed as follows:
- PD-1 has been conceptualised over 63.94 ha; [**60.16 ha. (non-Forest) & 3.78 ha. (Forest)**] near Talapada village and PD-2 over 78.09 ha. entirely over forest land, near Magazine.
- The design of the dumps has been reviewed with multiple iterations and found to be optimised as summarised below:
- As per the originally approved mining plan, dumps were designed to accommodate 52.13 Mm^3 over 164.76 ha., along with two backfill areas for 46.47 Mm^3 over 73.4 ha. Subsequently, the dump configuration was revised to enhance capacity by 8.29 Mm^3, while the two proposed backfill areas (I & II) were adjusted to hold 44.15 Mm^3, resulting in a total waste accommodation capacity of 104.57 Mm^3 (dump + backfilled).
- **Proposed Waste Dump -I**(63.94 ha.with a total capacity of 26.41 MCum) is proposed near Talapada village and adjacent to Sindurmundi deposit-I for the purpose of

accommodating entire mine waste generated from Sindurmundi deposit-I and partially from Sindurmundi deposit-II with haul road of 900 m. (**Ref. Fig.2**). The design parameters considered during optimization of dumping space are as follows:

- Total dump height: 140 m &Bench Height: 10 m
- Bench Width: 13 to 15 m (1.5 times the size of largest HEMM deployed)
- Bench slope: 37^0 to 44^0 and overall slope: $<27^0$

- Apart from this, considering the sensitivity of the site following mitigative measures would become essential to manage the surface runoff as well as to mitigate the risk of slope failure scenarios for which additional land of around 6 ha. area would be required for effective management of runoff, potential risk of failure scenarios, etc. leaving the effective area available for accommodating waste at 57 ha.
  - Toe walls for 3293 mtr will cover an area of 1.65 ha. (Approx.)
  - Gabion walls of 3094 mtr will cover an area of 1.55 ha. (Approx.)
  - Garland drain of 3313 mtr will cover an area of 1.66 ha. (Approx.)
- **Proposed Waste Dump - II** is proposed on the east and north of the Hill Top deposit that fall on the north-eastern part of the MLA over an area of 78.09 ha for the capacity of 34.01 M Cum over burden waste.
  - Total dump height: 120 m &Bench Height: 10 m
  - Bench Width: 13 to 15 m (1.5 times the size of largest HEMM deployed)
  - Bench slope: 37^0 to 44^0 and overall slope: $<27^0$

Like PD-I, following protective measures around the dump will be undertaken, which will cover around 6 ha. area leaving the effective area available for accommodating waste at 73 ha. (approx.)

- Toe walls for 3850 mtr will cover an area of 1.9 ha. (Approx.)
- Gabion walls of 3212 mtr will cover an area of 1.6 ha. (Approx.)
- Garland drain of 3875 mtr will cover an area of 1.9 ha. (Approx.)

It is apparent that out of 138.16 ha. (Earmarked for dumping), an area of around 12 ha. will be utilised for ensuring dump protection measures and therefore effective area available for accommodating 52.13 million M3 of waste remains 126 ha and with the design parameters mentioned above the same is found to be on optimal side and further reduction in this is expected to negotiate with the stability aspects of the dumps.

Component-3 (Area Under Utility Services):

As the conceptual land use, area earmarked for Utility Services is estimated to be at 27.10 ha Consisting of 2.80 ha for Magazine, 13.32 Ha for Roads, infrastructure & others and 10.98 ha mineral separation facilities as well as proposed infrastructure associated with it.

Sub Component wise justification

(1) Mineral Storage Area and Separation Plant (10.98 Ha.)

- The total earmarked area of 10.98 ha has been carefully planned and allocated as follows: (i) 0.33 ha for the existing primary stockpile (5,000 T), and (ii) 10.65 ha for the Mineral Beneficiation Plant, which encompasses intermediate stockpiles (15,000 T), future CLO (0.2 MT) and fines (0.3 MT) stockyards, crushing plants (800 TPH existing + 100 TPH proposed), and all associated infrastructure. This strategic allocation has been designed to ensure uninterrupted ore supply, facilitate safe movement of 35T dumpers and payloaders, enable effective dust suppression through water tankers, and incorporate essential environmental safeguards including garland drains and peripheral buffers. The current layout represents a well-optimized utilization of space where any reduction would adversely impact operational efficiency, material handling capabilities.

(2) Conveyor & Magazine Area proposed over 2.80

- The 0.93 ha. area earmarked for the magazine will accommodate explosives storage, including a monthly requirement of 18,560 kg for waste/development and 40,320 kg

for ore body development, along with safe storage for 160,000 meters of Nonel, 100-150 meters of safety fuse, and ~300 detonators—sufficient for one year's operations. Additionally, a single 10-meter-wide access road (1,063 meters long, totalling 1.063 ha) has been designed through Waste Dump (PD-2) to ensure smooth movement of fire tenders, explosive vans, and light vehicles, with 8,000 sq meters (0.8 ha) reserved for safety barriers, fire protection lines, and intrusion prevention measures.

(3) **Road Networkand Mineral Separation earmarked over 13.32 Ha.:**

Considering the Ultimate Pit Limit and location of dumping the road offering minimum degradation of land has been worked out.

- Configurations of the haulage road modified drastically from 5.26 km to 1.39 km; width 15 m) to minimize lead distance and land degradation.
- Already Existing Road network: 5.44 ha over diverted forest land
- Proposed Waste Dump -I is designed with a Haulage road from Sindurmundi deposit-I for a length of 900 m with a safe width of around 15mtrs (10 mtrs for Haul Road and 5mtrs for LMV road) will occupy around 1.35 ha. (**Ref. Fig.2**)
- Proposed Waste Dump - II near Hill Top deposit that fall on the north-eastern part of the MLA is designed to have aHaulage Road from Hill Top south pit proposed over around 2045 mtrs of similar width (15mtrs) which will occupy around 3.06 ha (**Ref. Fig.3**).
- An area of around 3.47 ha. has been earmarked for alternate passage for the dumps, access road within the mining area, etc.
- The land earmarked against this head is also to cater to meet the infrastructural requirement such as administrative building, Time Office, Pit Office, rest shelters, etc. for around 339 personnel to be deployed in a day.
- Similarly, the mine will rely for accommodating the fleet of 6 nos. of excavators, 17 nos. of Dumpers, 6 nos. of Drills, 7 nos. of loaders, 1 Dozer and 2 water tankers, etc. at a onsite workshop.

In view of the aforementioned facts, it can be inferred that the proposed mining plan has been meticulously designed to optimize land use while ensuring environmental sustainability, utilizing only 309.66 ha. (41.49%) of the applied 746.33 ha. of forest area and preserving 58.51% as intact forest cover. It may also be considered that additional reduction in the ML area would undermine the project's economic viability.

405.26 ha operational footprint has been meticulously designed to ensure sustainable extraction of **176.03 million tonnes of minable geological reserves** (as per 2024 exploration data) while adhering to stringent regulatory and safety norms. The **240 ha mining area** integrates **151 ha for active excavation** to the Ultimate Pit Limit (UPL), conforming to DGMS-mandated parameters (*10m bench width, 80°-90° bench slope, 45° overall slope*), with an additional **40 m peripheral buffer (89 ha)** to accommodate potential lateral expansion for structurally disturbed ore zones near UPL edges—critical given that **541,795 tonnes of ore remain blocked** due to depth constraints. The **138.16 ha dumping area**, configured as the bare minimum to safely hold **52.13 million m³ of overburden** (stripping ratio 1:0.58), strictly follows DGMS-prescribed geometry (*10m bench height, 13–15m width, 37°–44° bench slope, ≤27° overall slope*), with **12 ha** allocated for essential stabilization measures (toe walls, gabions, garland drains). The **27.1 ha utilities** encompass mineral processing (10.98 ha), DGMS-compliant roads (13.32 ha with segregated LMV lanes), and explosives storage (2.8 ha). This configuration—representing a **58% reduction** from the originally applied forest land—has been optimized through ICFRE's recommendations to balance reserve recovery, operational safety, and environmental safeguards.

In addition to 405.26 Ha of forest land proposed for Mining and ancillary activities, as proposed in the original proposal 13.28 ha would be maintained as safety zone all along the innerside of the Mining Lease area.

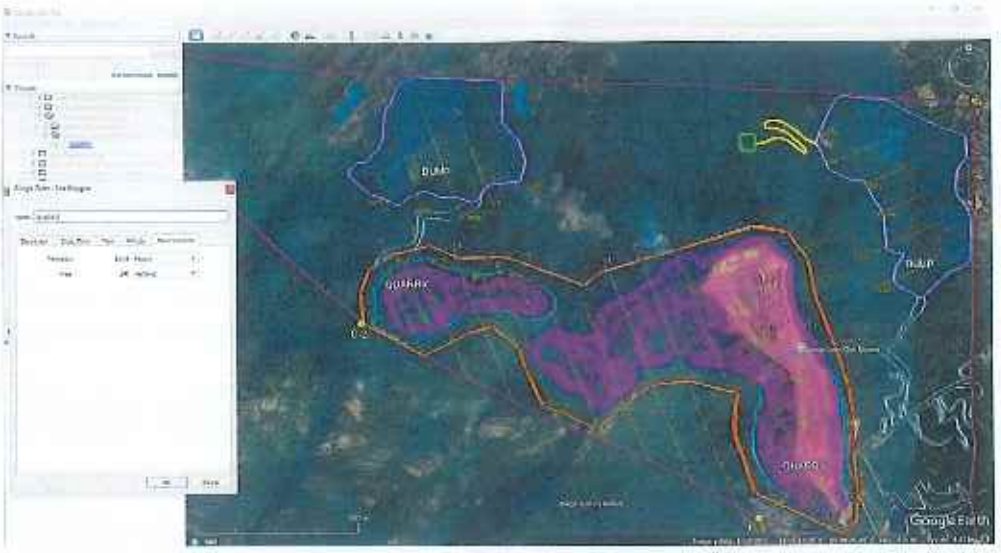

Fig. 1: 240 ha. of area earmarked for Mining
