E EXECUTIVE SUMMARY

E.1 Project Description

The project road, SH-98 passes through Katihar districts of Bihar, starts from Km 23+250 of SH- 62 (Purnia-Katihar road) toward left near Sirsa military camp. It passes through major settlement like Sonoulli, Salmari, Barsoi and Balrampur besides a lot of rural settlements all along the road length and ends at Balrampur at border of Bihar and West Bengal. The project road continues in west Bengal and meets to two lane Raiganj- Dalkola section of NH-34 at Tungidighi, which is 2 km from Border of Bihar and West Bengal. Project road is generally single/intermediate road configuration with fair to good pavement condition. The up-gradation to two lane of this road will improve the level of service and attract freight & passenger traffic. The section is generally of single/intermediate configurations. The condition of road is generally fair to poor and whole stretch passes through plain terrain.

E.2 Alternative Alignments/Bypasses

Considering the future traffic, congestion, geometric improvements and avoiding level junctions, two bypasses proposal are given in SH 98 Alignments, one at Sonaili (Near km 20+000) and other at Meenapur (km 32+100).

E.2.1 Alignment Options for Sonaili

The Sonaili town extends on both side of existing SH-98 alignment between Km 20+000 to Km 22+000.

Option 1: This Option takes off near existing Km 18+800 (approx 2.20 km behind from Sonaili T-junction). This Option is totally new alignment and passes through agricultural land and crosses Old SH road and Katihar- Siliguri rail line before merging with the existing SH-98 near existing Km 24+000. Total length is approx 5.15 km. The overall geometry is good.

Option 2: This Option takes off near existing Km 19+300 (approx 1.70 km behind from Sonaili T-junction). It passes through agricultural land and cross Katihar- Siliguri rail line before merging with the existing SH-98 near existing Km 24+000. Total length is approx 5.70 km of which 1.00km length follows existing road SH-98. The overall geometry is good.

Option 3: This Option is Existing SH-98 and passes through dense settlement of Sonaili Town and Level Crossing with sharp U-turn. After Sonaili, alignment passes through mainly agricultural land with some minor settlement in some sections. The overall geometry is very poor consists of sharp curve with short tangent which leads low speed. Total length of this option is approx 5.00 km.

Option 2 has been approved during presentation meeting held at BSRDCL, Patna on 9th January' 2014 and included for detailed study.

E.2.2 Alignment Option for Meenapur

The Meenapur and Sundargachhi village settlement presently exists along the existing SH-98. Proposal of Bypass is because of avoiding two level crossings and for geometric improvement.

Option 1: This Option 1 is Existing SH-98 and passes through medium settlement of Meenapur and Sundargachhi village and after that passes through mainly agricultural land. The alignment crosses a railway line two times of which first one level crossing is currently not in use. The overall geometry is good except these two level crossings. Total length of this option is approx 5.60 km.

Option 2: This Option 2 takes off from a T junction near Km 32+100 and passes through almost agricultural land and merge with the existing SH-98 near Km 37+400 at Salmari junction. It is a new alignment except 250m length before reaching Salmari junction follows existing SH-98 and total length is approx 3.65 km. The geometry is as per the design standard of state highway.

Option 3: This Option 3 is an existing PMGSY road which currently use for through traffic. It takes off forming T junction near Km 32+100 and passes through congested villages and merge with the existing SH-98 near Km 37+400 at salmari junction. Total length is approx 4.35 km. The overall geometry is very poor consists of sharp curve with short tangent which leads low speed and safety problem.

Option 2 has been approved during presentation meeting held at BSRDCL, Patna on 9th January' 2014 and included for detailed study.

E.3 Socio-Economic Profile

E.3.1 General

Katihar district is one of the thirty-eight districts of Bihar state, India, and Katihar town is the administrative headquarter of the district. The district is a part of Purnia Division. Katihar became a full-fledged district when it was split from Purnia in 1973. Earlier Katihar district was dominated by Choudhary Family who were the biggest landlords of Kosi zone . Founder of Choudhary family was Khan Bahadur Mohammad Baksh who holds lands of about 15000 acres in Katihar district, 8500 acres in Purnia.

E.3.2 Economic Situation

The social and economic profile of the state during the past decade has undergone tremendous change. State Domestic Product (SDP), popularly known as 'State Income', is an important and reliable indicator to measure the growth of the economy as well as level of development in various socio-economic sectors of a state. The per capita Net State Domestic Product or Per Capita Income (PCI) is used to determine the absolute as well as the relative performance of the State Economy. In other words State Domestic product (SDP) and Per Capita Income (PCI) reflect overall performance of economy of the State and also the well being of the people during a given period of time.

E.4 Traffic Analysis

The data (primary and secondary) collected has been analyzed to obtain information on ADT, Seasonal Variation, AADT, traffic composition, travel pattern and commodity movement pattern, Traffic Demand Forecasting. This information along with appreciation of other relevant parameters formed part of the basic input for the design and evaluation of the recommended improvement. These are discussed in the following paragraphs.

E.4.1 Traffic Characteristics

The data collected from primary and secondary sources has been computerised, compiled, checked and corrected before further proceeding for analysis. The data from various traffic surveys has been analysed to understand traffic characteristics and travel pattern in the study area. The analysis of the directional classified traffic volume counts observed for homogeneous sections has been carried out to work out the following traffic characteristics:

- Average Daily Traffic (ADT)
- Hourly Variation
- Daily Variation in Traffic Volume
- Directional Distribution
- Composition of ADT
- Annual Average Daily Traffic (AADT)

The various vehicle types having different sizes and characteristics were converted into Equivalent Passenger Car Units. The Passenger Car Unit (PCU) factors recommended by Indian Road Congress in "Guidelines for Capacity of Roads in Rural Areas" (IRC-64-1990) have been used for conversion, and are presented in Table E.1.

Table E.1: PCU Factors Adopted for Study

| Fast Vehicles | PCU | Slow Vehicles | PCU |
|-----------------|-----|--------------------------------|-----|
| Car | 1.0 | Agricultural Tractor | 1.5 |
| Taxi | 1.0 | Agricultural Tractor & Trailer | 4.5 |
| Mini Bus | 1.5 | Animal/Hand Cart | 6.0 |
| Tata Magic | 1.0 | Cycle | 0.5 |
| Standard Bus | 3.0 | Cycle Rickshaw | 2.0 |
| 3 wheeler Tempo | 1.0 | | |
| 4 wheeler Tempo | 1.0 | | |
| LCV/LGV | 1.5 | | |
| 2-Axle Truck | 3.0 | | |
| 3 Axle Truck | 3.0 | | |
| MAV | 4.5 | | |
| Two Wheeler | 0.5 | | |
| Auto Rickshaw | 1.0 | | |

Source: IRC: 64-1990

E.4.1.1 Traffic Intensity

The Classified Traffic Volume count survey has been conducted for 7 days continuously for each homogenous sections and 1 day on alternate corridor. For analysis purpose an average of 7 days count has been considered has been considered to get the Average Daily Traffic (ADT). Table E.2 presents the Average Daily Traffic (ADT). The obtained average daily traffic

will have to be adjusted to account for the seasonal variation to obtain the Annual Average Daily Traffic (AADT). Following are the salient findings:

Table E.2: Average Daily Traffic at Traffic Homogeneous Sections

| Vehicle Type | Project Corridor | | Alternate Corridor |
|--------------------------------|---------------------|--------------------------|--|
| | Sauria Km 11+000 | Gorakhpur More Km 43+100 | Dalkola Check Post Km 418+000 on Nh-31 |
| Two Wheeler | 1,254 | 1,644 | 2005 |
| Three Wheeler | 521 | 491 | 1364 |
| Car/Van/Jeep | 229 | 142 | 1274 |
| Mini Bus | 1 | - | 35 |
| Pvt Bus | 1 | - | 164 |
| Govt Bus | - | - | 13 |
| 3 wheeler Tempo | 50 | 16 | 135 |
| 4 wheeler Tempo | 61 | 87 | 251 |
| LCV | 9 | 14 | 344 |
| 2 Axle Truck | 34 | 14 | 418 |
| 3 Axle Truck | 31 | 34 | 1106 |
| MAV | 1 | - | 813 |
| MAV>6A | - | - | 39 |
| HCM/EME | 1 | 1 | 0 |
| Agricultural Tractor | 19 | 12 | 7 |
| Agricultural Tractor & Trailer | 105 | 92 | 132 |
| Non Motorised Vehicles | Animal & Hand drawn | 2 | 3 |
| | Cycle | 1,220 | 291 |
| | Cycle Rickshaw | 2 | 32 |
| | Others | - | 0 |
| Vehicles | Motorised | 2,317 | 8100 |
| | Non Motorised | 1,224 | 326 |
| | Total | 3,541 | 8426 |
| PCU | Motorised | 2,211 | 14137 |
| | Non Motorised | 626 | 228 |
| | Total | 2,837 | 14365 |

- The average daily traffic on the corridor vary between 3541 vehicles (2837 PCU) between 3931 vehicles (2863 PCU)
- The variation in the directional split 50:50 and 49:51 at Sonali and Gorakhpur more respectively;
- The traffic intensity in Salmari - Balrampur section is higher than the Sirsa - Salmari section and is primarily due to the influence of local non motorised traffic near Salmari and Barsoi
- Share of cars and Autos are more at Sonali compare to the Gorakhpur more but share of 2 wheeler and non motorised traffic is high at Gorakhpur more.
- Commercial vehicles are very less at both the sections on the project corridor.

E.4.1.2 Annual Average Daily Traffic

The AADT has been estimated by applying the seasonal correction factor as estimated above to the average daily traffic from primary surveys. Table E.3 presents the Annual Average Daily Traffic (AADT). The salient findings are presented below:

Table E.3: Annual Average Daily Traffic

| Vehicle Type | | Sauria Km 11+000 | Gorakhpur More Km 43+100 |
|--------------------------------|---------------------|------------------|--------------------------|
| Two Wheeler | | 1,467 | 1,923 |
| Three Wheeler | | 610 | 574 |
| Car/Van/Jeep | | 268 | 166 |
| Mini Bus | | 1 | - |
| Pvt Bus | | 1 | - |
| Govt Bus | | - | - |
| 3 wheeler Tempo | | 59 | 19 |
| 4 wheeler Tempo | | 71 | 102 |
| LCV | | 11 | 16 |
| 2 Axle Truck | | 40 | 16 |
| 3 Axle Truck | | 36 | 40 |
| MAV | | 1 | - |
| MAV>6A | | - | - |
| HCM/EME | | 1 | 1 |
| Agricultural Tractor | | 19 | 12 |
| Agricultural Tractor & Trailor | | 105 | 92 |
| Non Motorised Vehicles | Animal & Hand drawn | 2 | - |
| | Cycle | 1,220 | 1,377 |
| | Cycle Rickshaw | 2 | 7 |
| | Others | - | - |
| Vehicles | Motorised | 2,690 | 2,962 |
| | Non Motorised | 1,224 | 1,384 |
| | Total | 3,914 | 4,346 |
| PCU | Motorised | 2,502 | 2,453 |
| | Non Motorised | 626 | 703 |
| | Total | 3,128 | 3,156 |

The salient findings are briefed below:

- Traffic is high at Gorakhpur more in numbers compare to the Sonali
- There is no much variation in the traffic in terms of PCUs at both the homogeneous sections

E.4.2 Traffic Projection

The total corridor traffic is the sum of normal traffic, induced, diverted traffic and generated traffic. The total estimated traffic on to the project corridor has been presented in the Table E.4.

| 2043 | 44695 | 35870 | 49075 | 36566 |

E.5 Capacity Analysis

IRC: 64 - 1990 stipulates a design service volume of 15,000 PCU per day for a two lane undivided carriageway without paved shoulders at level of service B in plain terrain. The capacity of the 2 lane road can be increased upto 15% by providing 1.5m paved shoulder. The traffic projections on the sections of the project corridor have been compared with the design service volume for a 2 lane carriageway with and without paved shoulder. As per the Traffic projection 2 lane can serve for next 20 years.

E.5.1 Proposals along Major Settlements

The details of major settlements and improvement proposals along settlements on existing road are given in Table E.5 below.

Table E.5: Improvement Proposals along Major Settlements

| S. No. | Name of Settlement | Existing Km | Approx. Length | Proposal |
|--------|--------------------|-------------|----------------|----------|
|--------|--------------------|-------------|----------------|----------|

DRAFT DETAILED PROJECT REPORT
Volume I (Part-I): Main Report
Consultancy Services for Feasibility Study and Preparation of
DPR for Katihar – Balrampur (SH-98) Package VIII

| | | | (m) | |
|---|-------------------|-----------------------------|------|---|
| 1 | Sonaili Town | From Km 20+750 to Km 22+000 | 1250 | Standard 2-lane Sonaili Bypass (from km18+500 to km 23+000) |
| 2 | Salmari Town | From Km 37+500 to Km 39+500 | 2000 | Standard 2-lane flexible/rigid pavement with both side Widening |
| 3 | Barsoi Town | From Km 48+000 to Km 49+785 | 1785 | 4-lane rigid pavement with both side Widening |
| 4 | Raghunathpur Town | From Km 52+500 to Km 53+000 | 500 | Standard 2-lane with both side slip road |

E.5.2 Typical Cross-Sections

Typical cross-sections for widening and new construction of highway have been developed based on site requirements and to meet design standards stated in the two lanes manual for the State Highways. A schedule, detailing type of cross-section adopted in different sections of the project road is presented in Table E.6.

Table E.6: Typical Cross-Section Details

| Type of TCS | Description |
|-------------|---|
| Type 1 | Both side widening with 7m carriageway width and 2.5 m earthen shoulder on both side of carriageway. |
| Type 2 | One side widening with 7m carriageway width and 2.5 m earthen shoulder on both side of carriageway. |
| Type 3 | New construction with 7m carriageway width and 2.5 m earthen shoulder on both side of carriageway for realignment/bypasses. |
| Type 4 | New construction with 7m carriageway width, 1m paved shoulder and 1.5 m raised footpath cum lined drain on both side of carriageway with rigid pavement in built-up areas. |
| Type 5 | New construction with 7.5m carriageway, 1.5 m raised median and 1.5m raised footpath cum lined drain on both side of carriageway with rigid pavement at Barsoi town. |
| Type 6 | New construction for ROB approaches in Semi urban areas with both side slip road of 5.5m width with 7m carriageway, 2.5 m granular shoulder and 1m raised footpath cum lined drain on both side of slip road |
| Type 7 | New construction for ROB approaches in Rural areas without slip road with 8m carriageway, 2 m raised shoulder and open drain of 1.5m width on both side of carriageway |

E.5.3 Widening Schedule

The widening options developed section wise is presented in **Table E.7** below. The length of sections according to the type of widening i.e. left/right/both is as follows:

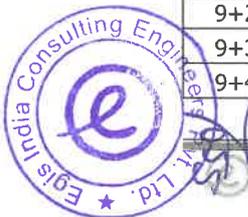

| | |
|---------------------------------|-----------|
| Both side widening | 39.343 km |
| Left hand side widening | 1.470 km |
| Right hand side widening | 0.630 km |
| Realignment & curve improvement | 7.652 km |
| Bypasses | 6.870 km |
| Four lane road | 1.785 km |
| ROB with approaches | 4.770 km |
| Slip road | 2.550 km |

Table E.7: Widening Schedule

| Design Chainage (Km) | | Proposed Length (m) | Widening (LHS/RHS/ Both) | Type of TCS | Remarks |
|----------------------|-------|---------------------|---------------------------------------|-------------|----------------|
| From | To | | | | |
| 0+000 | 0+448 | 448 | Both side | TYPE-1 | |
| 0+448 | 0+873 | 425 | New ROB appoache with slip road | TYPE-6 | |

Slip Roads

Slip roads of 5.5m width are mainly proposed on ROB to provide all direction movements at such locations. The schedule is presented in Table E.8 below:

Table E.8: Locations of Slip Roads

| Design Chainage | | Existing Km | | Width(m) | Length(m) | Side | Remarks |
|-----------------|--------|-------------|--------|----------|-----------|------|------------------------|
| From | To | From | To | | | | |
| 0+420 | 0+873 | 0+422 | 0+877 | 5.5 | 453 | BOTH | Near ROB @km 0+900 |
| 0+928 | 1+400 | 0+932 | 1+406 | 5.5 | 472 | BOTH | |

| 50+635 | 51+120 | 48+128 | 48+611 | 5.5 | 485 | BOTH | |

E.5.4 Design of Pavement for New Construction

Design of new flexible pavement applies to the new carriageway, widened portions of existing carriageway, bypasses and reconstruction stretches. The objective of the pavement design is to provide the best combination and thickness of pavement structure materials, over the sub-grade that will reduce the stress caused by loading to within the load-carrying capacity of the sub-grade soil. Flexible Pavement with Granular Base and Sub-Base (Conventional)

Flexible Pavement with Granular Base and Sub-Base

The methodology recommended in IRC: 37-2012 is adopted for the design of flexible pavement structure.

Bituminous pavement with granular base and sub-base is considered as a three layer elastic structure consisting of bituminous surfacing, granular base and sub-base and the sub grade. The granular layers are treated as a single layer. Strain and stresses are computed for three layer elastic system. For traffic < 30 msa, VG 30 bitumen is recommended for BC as well as DBM.

The pavement thickness worked out for 15 years design period is given in the table below.

Table E.9 : New Pavement Structure for 15 Years Design Life

| S. No. | Lanes | Traffic Homogenous Sections | | Estimated Traffic (msa) | Recommended Traffic | | Design CBR (%) | New Construction/ Widening (mm) as per IRC:37-2012 | | | | | When Bottom of SG is within 1.5m from water level during monsoons |
|--------|--------|-----------------------------|--------|----------------------------|---------------------|---------------------------|----------------|--|-----|-----|-----|-------|--|
| | | Existing Chainage (km) | | | For BT Layers | For Granular Layers | | BC | DBM | WMM | GSB | Total | |
| | | From | To | | (msa) | (msa) | | | | | | | Capillary Cut Off- Coarse Sand |
| 1 | 2 Lane | 0+000 | 37+400 | 4.2 | 5 | 10 | 4 | 30 | 55 | 250 | 330 | 665 | 150 |
| 2 | 2 Lane | 37+400 | 65+100 | 3.9 | 5 | 10 | 4 | 30 | 55 | 250 | 330 | 665 | 150 |

E.5.1 Strengthening Design for Existing Carriageway

Based on the studies and investigations, it is found that the use of Benkelman Beam method will not result in a realistic assessment of the strengthening treatment. At few locations the pavement distresses have been covered, where recent overlays have been provided to improve the riding quality of the pavement. Therefore strengthening of existing pavement with bituminous overlay as per BBD deflections is not suggested for the current road project.

E.5.2 Design of Concrete Pavement

The concrete pavement has been proposed in following location.

Table E.100: Location of Concrete Pavement

| Existing Chainage (Km) | | Design Chainage (Km) | | Proposed Length (m) | Location | Remarks |
|------------------------|--------|----------------------|--------|---------------------|--------------|---------|
| From | To | From | To | | | |
| 5+458 | 6+286 | 5+300 | 6+100 | 800 | Belwa | 2-Lane |
| 7+981 | 8+412 | 7+750 | 8+175 | 425 | Govind Chowk | |

E.6 Environmental Clearances Required for the Project

After reviewing the various applicable acts and statutes, the following clearances and permission are required for the project. A summary of clearances required for the present project is shown in the following table:

| S. No. | Subject | Authority Granting Clearance | When Required | Remarks |
|--------|---|--|--|---|
| 1 | Forest Clearance and Tree cutting permission | Department of Forest, Govt. of Bihar (GoB). | Before Construction | BSRDCL's responsibility. Application for forest clearance will be submitted to Principal Chief Conservator of Forest (PCCF), Patna, Bihar |
| 2 | Consents under Water Act, 1974 & Air Act, 1981 for Batching plant, Hot Mix Plant, Crusher and DG sets | Bihar State Pollution Control Board (BSPCB), Patna | Before Construction | BSRDCL's responsibility through appointed Concessionaire |
| 3 | Permission for extraction of boulder /Stone Quarry lease | Department of Mines & Geology/ Local Bodies | Before Quarrying | If the extraction of boulders is being procured from the existing stone quarry/supplier, it shall be ensured that requisite license/lease has been obtained from the concerned Authority. |
| 4 | Permission for extraction of sand | Department of Mines & Geology, Government of Bihar | Before Quarrying | If the extraction of sand is being procured from the existing sand quarry/supplier, it shall be ensured that requisite license/lease has been obtained from the concerned Authority |
| 5 | Labour license | Labour Commissioner | During Construction | Concessionaire's responsibility |
| 6 | License for storing diesel | Commissioner of Explosives & BSPCB | During Construction | Concessionaire's responsibility |
| 7 | Labour camps | District Health Officer | During Construction | Concessionaire's responsibility |
| 8 | If water has to be taken from river / Reservoir | Concerned Water Authority | During Construction at the specific site | Concessionaire's responsibility |

E.7 Rehabilitation and Resettlement Issues

| Category | Characteristics | Safeguard Requirements |
|---|--|--|
| A (Significant impact) | 200 or more persons experience major impacts, which are defined as (i) being physically displaced from housing, or (ii) losing 10% or more of their productive (income generating) assets. | Resettlement plan, including assessment of social impacts; |
| B (Not Significant impact) | Involuntary resettlement impacts are deemed not significant | Short Resettlement Plan, including assessment of social impacts. |
| C (No Involuntary Resettlement impact) | No involuntary resettlement impacts are foreseen. | No action (a (desk) due diligence report may be required) |
| FI (Financial Intermediary) | Has potential resettlement impact, to be determined | Environmental and social management system |

E.8 Economic Analysis

The economic analysis has been based on comparison of costs and benefits under 2 scenarios 'without the Katihar-Balrampur road project' and 'with the Katihar- Balrampur road project'. All costs and benefits are valued in monetary terms and expressed in economic prices to have the analysis on resource based frame-work. The analysis is made project-wise. The results are expressed in terms of Economic Internal Rate of Return (EIRR) and Economic Net Present Value (ENPV).

The project road is found viable returning a NPV of Rs 407.32 million and an EIRR of 12.6% EIRR is above the threshold of 12%. A sensitivity analysis on the project has been performed under various scenarios i.e. change in capital cost and traffic volume, It has been found that the project is economically viable in base cost only. This is because of higher cost of land acquisition as per new land act.
