Note No. #1

Sub: Approval of Mining Plan (including progressive and final Mine Closure Plan) for Nigahi Expansion OCP (25.00 Mtpa) with 2000m3/Day Overburden processing Plant to generate manufactured sand in project.

Subject matter was placed for consideration and approval of NCL Board in its 288th meeting held on 10/08/2023 at Singrauli, vide Item No. 288/C-2.

In this regard Company Secretary, NCL may kindly be advised to provide decision of Board of Director of NCL on urgent basis, in view of compliance against EDS (Extra Details sought) raised by Astt. Inspector General of Forest vide letter No. F. No. 8-26/20/5/FC-Vol Dated 05/07/2023 and obtaining Environmental Clearance for 25.00 Mtpa.

URGENT COMMUNICATION OF BOARD DECISION

Item No. 288/C-2 Approval of Mining Plan (including Progressive and Final Mine Closure Plan) for Nigahi Expansion OCP (25.00 Mtpa with 2000 m3/ Day Overburden Processing Plant to generate Manufactured Sand in Project Area of 3582.723 Ha) as per guidelines of MoC.

In connection with above, it is communicated that above proposal was placed in 288th Board meeting held on 10.08.2023 and Board of Directors, after detailed deliberation, accorded approval to subject proposal, as brought out in the agenda note.

NIRMAL SAINI (COMPANY SECRETARY)

Note No. #6

Notes on above, the proposal for Approval of Mining Plan (including Progressive and Final Mine Closure Plan) for Nigahi Expansion OCP (25.00 Mtpa with 2000 m3/ Day Overburden Processing Plant to generate Manufactured Sand in Project Area of 3582.723 Ha) was placed in 288th Board meeting held on 10.08.2023 and Board of Directors, after detailed deliberation, accorded approval to subject proposal, as brought out in the agenda note. As requested by GM (CP), the urgent communication of the Board approval may be provided for further action.

Submitted for kind approval please.

SUSHANTA KUMAR PANDA (COMPANY SECRETARY) Mining Plan including Mine Closure Plan (as per latest guidelines of Ministry of Coal)

MINING PLAN (including Mine Closure Plan) FOR NIGAHI EXPANSION OCP

(Coal Production Capacity of 25.00 Mtpa with 2000m³/Day Overburden Processing Plant to generate Manufactured Sand in Project Area of 3582.723 Ha.)

> (Production Capacity of Coal – 25.00 Mtpa) (Project Area – 3582.723 Ha)

Singrauli Coalfield, Singrauli District, Madhya Pradesh State (In line with the Guidelines of MoC vide dated 29-05-2020 & 09-09-2020)

JULY - 2023

Northern Coalfields Limited PO- Singrauli, Dist- Singrauli, State -MP - 486889 Prepared by: CMPDI, RI-VI, PO- Jayant Colliery, Dist - Singrauli (MP) 486890 Mass balancing of Coal production, OB excavation & generation of Manufactured Sand (Peak excavation per year) at year wise during the balance period of mine.

EC granted to Nigahi OCP by MoEF&CC vide letter No. J-11015/79/2013-IA-II(M), EC Identification No. EC22A042MP180012 dated 25.07.2022 which has been revalidated on 20.07.2023 vide EC Identification No. EC23A001MP170130.for a production capacity of 22.50 Mtpa in project area of 3018.400 Ha based on the Mining Plan approved by NCL Board in its 276th Board meeting held on 30.05.2022.

The Mining Plan (including Mine Closure Plan) has been prepared for obtaining Environmental Clearance for 25.00 Mtpa for supply of coal to thermal power stations and other consumers to meet the increased energy demand in the country in area of increase from 3018.400 Ha to 3582.723 Ha (additional land area 564.323 Ha).

Balance life of the mine as on 01.04.2023: 18 years i.e. upto FY 2040-41.

The Mass Balance study of Coal Production, OB Excavation & generation of Manufactured Sand (Peak excavation per year) year wise during the balance period of mine for Nigahi OCP is given below:

Consideration as per the EC / Mining Plan for mass balance/ material balance study:

- Coal mined out in a year (Peak during life of the mining activities) = 25 Million Tonne / 16.13 Million cubic meters.
- OB removed in a year (Peak during life of the mining activities) = 235.17 Million Tonne/ 135.00 Million cubic meters.
- Total Mass (Peak material handling during the life of mine) = 260.17 Million
 Tonne / 151.13 Million cubic meters (approx.) in a year.

Based on Proposed EC for generation of manufactured sand from overburden processing plant scenario, the mass balance study has been carried out (considering the balance life of 18 years from FY 2023-24).

| Year wise mass | / material | balance: | For F | Production |
|----------------|------------|----------|-------|------------|
|----------------|------------|----------|-------|------------|

| | Coal prod per pro Mining | uction as posed g Plan | Waste/ By Product | | Total (Mm³) | |
|---------|--------------------------------|---|---|--|-----------------------------------|--------------------------------------|

Justification for Mining Plan (including Mine Closure Plan) for inclusion of Overburden Processing Plant to generate Manufactured Sand

At present the latest Mining Plan (including Mine Closure Plan) prepared for a production capacity of 22.50 Mtpa in an area of 3018.400 Ha has been approved by NCL Board in the 276th Board meeting held on 30.05.2022 and EC for 22.50 Mtpa has been granted by MoEF&CC vide letter No. J-11015/79/2013-IA-II(M), EC Identification No. EC22A042MP180012 dated 25.07.2022 which has been revalidated on 20.07.2023 vide EC Identification No. EC23A001MP170130.

This Mining Plan is prepared based on the Expansion Project Report of Nigahi OCP (15 Mtpa to 25 Mtpa) approved by CIL Board in 414th meeting on 11.11.2020 for an additional capital investment of Rs. 1729.68 crores with approved option-II i.e. total coal departmental & partial OB outsourcing (sanctioned 15 Mtpa+10 Mtpa incremental coal by departmental Surface Miner and incremental OB by outsourcing)

Mining Plan (including Mine Closure Plan) has been prepared for obtaining Environmental Clearance for 25.00 Mtpa for supply of coal to thermal power stations and other consumers to meet the increased energy demand in the country in area of increase from 3018.400 Ha to 3582.723 Ha.(additional land area 564.323 Ha)

Subsequently, as per directives of Ministry of Mines (Sand Mining Framework, 2016) and Ministry of Coal, new initiative for conservation of minerals and to reduce environmental impacts on river ecosystem, production of manufactured sand from the overburden materials at Nigahi Opencast Coal mine has been proposed. This sand generated from overburden processing will be an initiative for converting waste to useful resources. For this an overburden processing plant for generation of manufactured sand with capacity of 2000 m³/day is proposed to be installed within present project area of Nigahi OCP.

For installation & commissioning of plant for sand segregation from overburden material excavated from revenue land at Nigahi Expn. OCP along with regular coal mining operations with 25 Mtpa production in project area of 3582.723 Ha; in proposed EC has to be obtained from MoEF&CC.

Accordingly Mining Plan (including Mine Closure Plan) has been prepared for inclusion of overburden processing plant for generation of manufactured sand along with coal mining operations.

BRIEF ON OVERBURDEN PROCESSING FOR GENERATION OF MANUFACTURED SAND:

Sand is formed by natural erosion processes over thousands of years. Sand and gravel are mined out worldwide and account for the largest volume of solid materials extracted globally.

These are being extracted at a greater rate than their natural formation rate. Use of sand and gravel in colossal quantities in construction activities, increases dependence on these materials. Ensuring their availability is vital for infrastructure development. Excessive removal of sand from river bed has adverse impacts on river, delta, coastal and marine ecosystem and may significantly distort the natural equilibrium of a stream. Major impacts are evident like loss of land through river / coastal erosion, lowering of water table and decrease in the amount of sediment supply. Sand mining from rivers can also damage private and public properties as well as aquatic habitats. Thus extraction has to be regulated and required environmental safeguards during sand mining are to be ensured.

Use of manufactured sand, artificial sand and alternative technologies in construction materials and processes have to be encouraged for reducing the dependence on naturally occurring sand and gravel.

The overburden materials generated from coal mine of this region consists mainly of alluvial soil, hard rocks viz. Sandstone, shale & their intercalations. Sandstone is the main constituent of overburden material. Sandstone is the rock formed by cementing of sands composed largely of quartz and silicate minerals. Preliminary investigation report suggests 70-80% sand (as per IS-383 (2016)) concentration in overburden material of Nigahi OCP.

This sand if extracted from overburden materials can be alternative to river sand and be utilized as construction material grade sand and in other geotechnical applications. Use of this manufactured sand will help in reducing environmental impacts on the river ecosystem. This Manufactured sand can be made available in all seasons and cost will also be cheaper than river sand. Sand segregation from overburden material in open cast coal mines of NCL will be an important step in this direction. Segregation of sand from overburden material can be achieved along with regular coal mining operations in accordance to permission to be obtained from Regulatory Authorities.

Accordingly, it is proposed for generation of manufactured sand by processing of overburden material excavated from land, which is abundantly available at Nigahi OCP.

In view of above, Mining Plan (including Mine Closure Plan) to include overburden processing plant to generate manufactured sand along with coal mining operations has been prepared. It will help in conservation of minerals and reduce environmental impact on river ecosystem by minimizing the foot prints and dependency on river sand.

Mitigative measures for pollution control will be taken for both the coal mining operations and Sand segregation plant.

| SI. | Source of Air Pollution | Control Measures |
|-----|-------------------------|--|
| No. | | |
| 1 | Crushing | Fully covered crusher, chances for leakage |
| | | will be almost negligible. |
| 2 | Vibrating Screen | Will be Covered externally to reduce the air |
| | | borne dust. |
| 3 | Loading | Segregated sand after washing in the hydro- |
| | | cyclone will become wet. |
| 4 | Transportation | Wet segregated sand will be transported via |
| | | tarpaulin covered trucks |

| SI. No. | Source of Water Pollution | Control Measures |
|------------|------------------------------|---|
| 1 | Hydro-cyclone | Treated water from ETP situated at Nigahi Project |
| | (washing of sand) | will be used in the hydro-cyclone to separate clay |
| | | and silt from the OB. The water with clay and silt |
| | | will be transferred into the thickener which will |
| | | separate 90% of the total input water for reuse, |
| | | whereas the balance 10% water with clay will be |
| | | discharged through pipeline in clay pond for |
| | | settling. The Clay pond is left for drying. The water |
| | | left out after evaporation in clay pond will be |
| | | reused for various purposes in plant. Thus Zero |
| | | water discharge will be there. |

Exercise on mass balance considering the Sand Segregation along with normal mining activity as per proposed EC has been carried out. As per the exercise the total production/Material handling (Coal+OB+Sand in Million Cubic Meter) has been proposed EC capacity of 25.00 Mtpa.

MERITS OF THE PROPOSAL:

The sand segregation plant is proposed to be commissioned within project area of 3582.723 Ha as per Proposed EC along with regular coal mining operations with production capacity of 25.00 Mtpa. It will have following benefits:

- (i) Degradation of land can be minimized.
- (ii) Generation of indirect employment from operation of overburden processing plant.
- (iii) Reduce the dependency and demand on naturally occurring sand for construction works to a great extent. It will help in conservation of river ecosystem.
- (iv) Availability of sand in all seasons. Uninterrupted supply of sand without any seasonal affect throughout the year.
- (v) Cost of sand will be substantially cheaper than river sand.

- (vi) Conversion of waste (OB material) to useful resource.
- (vii) Revenue generation through selling of sand segregated from overburden(Waste) materials as Business Diversification plan for the company.

Conclusion:

Mining Plan (including Mine Closure Plan) has been prepared as per the latest guidelines of Ministry of Coal dated 29.05.2020 & 09.09.2020 for approval of NCL Board. It has been revised for inclusion of Sand Segregation Plant with capacity of 2000 m³/day along with regular coal mining operations with proposed production capacity of 25.00 Mtpa within project area of 3582.723 Ha as proposed EC.

CHAPTER 1 PROJECT INFORMATION

Note: Prepared based on the Expansion Project Report (15 Mtpa to 25 Mtpa) for Nigahi Opencast Project approved by CIL Board in 414th meeting on 11.11.2020 for an additional capital investment of Rs. 1729.68 crores with approved option-II i.e. total coal departmental & partial OB outsourcing (sanctioned 15 Mtpa + 10 Mtpa incremental coal by departmental Surface Miner and incremental OB by outsourcing).

| | physiographic | of Moher Sub-Basin of Singrauli coalfield. The | | | |
| | features, | Block is adjacent to Amlohri coal Block in the West | | | |
| | drainage | and Jayant Block. It stands out as a hilly plateau | | | |
| | pattern, natural | with elevations of about 400-450 m above mean | | | |
| | water courses, | sea level. Some relief elevations exceed 500m. | | | |
| | rainfall data, | The climate of the area is tropical with severe | | | |
| | highest flood | summer. The temperature in summer goes as high | | | |
| | level | as 48°C in May-June. In winter the temperature | | | |
| | | varies from 4°C to 21°C (November-February). | | | |
| | | Predominant wind direction is south-west. The | | | |
| | | average monthly wind velocity varies from 2.5 to 4.5 | | | |
| | | km/hr. | | | |
| | | | | | |
| | | The average annual rainfall is around 1000 mm of | | | |
| | | which 95% precipitation is during the rainy season | | | |
| | | (June -September). | | | |
| 1.2.5 | Important | | | | |
| | surface features | | | | |
| | within the | | | | |
| | project area and | There is no major diversion or shifting involved. | | | |
| | major diversion | | | | |
| | or shifting | | | | |
| | involved | | | | |

CHAPTER 4 SAFETY MANAGEMENT

| | Parameters | Details | | |
|-----|------------------|--|--|--|
| 4.1 | Safety Managemen | t | | |
| | Important safety | Safety of men and machine deployed in the mining | | |
| | aspects: | area should be properly taken care of irrespective of | | |
| | | whether the mining activities are performed by | | |
| | | departmental or by outsourcing means. | | |
| | | | | |
| | | All the statutory provisions laid down in The Mines Act | | |
| | | 1952, Coal Mine Regulation 2017 and specific | | |
| | | permission from DGMS relating to mining in general | | |
| | | and opencast mining in particular have to be adhered | | |
| | | to and implemented in order to maintain day to day | | |
| | | safety. | | |
| | | | | |
| | | 1. Safety aspects for of HEMM / equipment | | |
| 411 | | Special precaution should be taken while deploying | | |
| | | workers in the mine. Before employing any person to | | |
| | | the mine proper vocation training should be imparted | | |
| | | and recommendations of various Safety Conferences | | |
| | | should be strictly followed. Some of the major aspects | | |
| | | are as follows: | | |
| | | A) For persons: | | |
| | | i) No persons shall be deployed unless he is trained | | |
| | | at VTC and holds VTC Certificates. A record of the | | |
| | | same shall be maintained. | | |
| | | ii) Records in Form-B and Form-D shall be | | |
| | | maintained. | | |
| | | iii) Records of driving license of operators shall be kept | | |
| | | by competent authority and shall be made readily | | |
| | | available for inspection by management. | | |

| Parameters | Details |
|------------|---|
| | iv) Adequate supervision shall be maintained by |
| | competent persons, including officials and |
| | technicians. |
| | |
| | B) For Machineries: Provisions of Regulation 109, |
| | 110, 216 & 217 of CMR 2017 and DGMS Cir. |
| | (Tech.) 1 of 1999 should be strictly adhered to |
| | along with the following: |
| | i) All machinery and plant used in connection with |
| | working of a mine shall be of good design, sound |
| | construction, and suitable material, adequate |
| | strength, free from patent defect and properly |
| | maintained. |
| | ii) The owner, agent and manager shall provide |
| | adequate training facilities and ensure proper |
| | training of persons employed for operation and |
| | maintenance of machinery and plant. |
| | iii) No person except an engineer or other competent |
| | person under his supervision shall undertake any |
| | work on machinery and plant in which technical |
| | knowledge or experience is required. |
| | iv) All the machineries to be deployed in mines shall |
| | be so designed as to afford the operator clear and |
| | uninterrupted vision all around. |
| | v) Every heavy earth moving machineries, including |
| | trucks and tippers, used in mine shall be fitted with |
| | adequate safety features or devices as specified by |
| | DGMS. All equipment shall be provided with audio- |
| | visual alarms, proper light for use at night and fitted |
| | with suitable type of the fire extinguishers. |
| | vi) Truck mounted drill machines designed for tube |
| | well drilling for sources of water shall not be used |

| Parameters | Details |
|------------|---|
| | and only proper type of blast hole drill machine, |
| | especially designed for mining purpose, shall be |
| | used in the mine. |
| | vii) Every heavy earth moving machinery shall be |
| | under the charge of a competent person (Operator |
| | or Driver), authorized in writing by the Manager. |
| | viii) All persons employed or to be employed to operate |
| | heavy earth moving machinery shall be trained and |
| | their competency shall be evaluated by a Board |
| | constituted by the management, who shall be |
| | persons who are not connected with imparting of |
| | training. |
| | ix) A proper record of repair and maintenance along |
| | with inspection done by competent authority and |
| | defect pointed out shall be maintained and signed |
| | by authorized person. |
| | x) Only such fitters or mechanics possessing driver's |
| | or operator's license, shall be allowed to carry out |
| | test-run of heavy earth moving machineries. |
| | xi) No person other than the operator or the driver or |
| | any person so authorised in writing by the manager |
| | shall be allowed to ride on a heavy earth moving |
| | machinery |
| | |
| | |
| | i) Every person shall strictly adhere to the provisions |
| | of the Act and of the rules and regulations and to |
| | any order or direction issued by the manager or an |
| | onicial with a view to the safety of convenience of |
| | persons not being inconsistent with the Act, rules |
| | and these regulations; nor shall be neglect or |
| | refuse to obey such orders or directions. |

| Parameters | Details |
|------------|--|
| | ii) Every person shall, immediately before proceeding |
| | to work and immediately after terminating work at |
| | the end of his shift have his name recorded in the |
| | appropriate register. |
| | iii) Risk Management Plan of tipper/pay loader shall |
| | be made and implemented. |
| | iv) All operators/drivers so authorised by the Manager |
| | shall observe the Regulation 62 and 63 of CMR |
| | 2017 and obey the systematic traffics rules |
| | prepared by management |
| | v) Before deploying workers, they must be trained and |
| | briefed about safety aspects in opencast mine. |
| | However, during course of execution of the work, if |
| | any accident occurs whether major or minor, the |
| | matter shall have to be immediately informed to |
| | mine management i.e. Colliery Manager/Agent/GM |
| | of Area so that Notices of accidents in a |
| | accordance of (Reg. 8 of CMR 2017) and Section |
| | 23 of The Mines Act 1952 may be given and other |
| | necessary steps may be taken in accordance with |
| | the Mines Act 1952. |
| | vi) Mine authority shall operate transport system in |
| | such a way so as to minimize pollution in the mine. |
| | |
| | 2. STABILITY OF BENCHES, QUARRY HIGHWALLS |
| | AND SPOIL DUMPS |
| | During quarry operations, it is necessary to adopt |
| | required mining parameters for the stability of benches, |
| | nign-walls and spoil dumps. It is also mandatory to |
| | examine systematically the tencing of mine workings, |
| | landslides and cracks between benches. It is required |
| | to maintain well-graded and wide roads on benches |

| Parameters | Details |
|------------|---|
| | keeping the width of working areas sufficient for |
| | spreading of blasted rock and movement of the mining |
| | and transport equipment. |
| | During actual mining operation, systematic |
| | observations of the condition of benches, high wall |
| | slopes and spoil dumps should be carried out and the |
| | dimensions be modified if necessary to suit the local |
| | conditions. To ascertain the optimum slope angles for |
| | stability of quarry benches, high-walls and spoil dumps, |
| | scientific study of slope stability along with hydro- |
| | geological study of the area needs to under taken. |
| | During actual mining operation, systematic |
| | observations of the condition of benches, high wall |
| | slopes and spoil dumps should be carried out and the |
| | dimensions be modified if necessary to suit the local |
| | conditions. |
| | Provisions laid down in Reg. 106 and 108 of the Coal |
| | Mines regulation 2017 shall be strictly adhered to for |
| | the safety of quarry and OB/ spoil dumps. In addition |
| | to this, the following precaution should be considered: |
| | i) The spoil dump height should not exceed 150m |
| | (maximum from ground level as mentioned in EC |
| | $10.02,2015$) with an everall slope of 20° or loss in |
| | the event of encountering steep floor gradient, floor |
| | blasting should be done and the area properly |
| | levelled by dozer before spoil dumping |
| | ii) No working or construction should be allowed |
| | within the 60m too of the OB dump |
| | iii) Before dumping the OR on the floor of seem at |
| | least 10m length all along the strike length should |
| | he made horizontal at every 50 meter by floor |
| | dinting/blasting. |

| Parameters | Details |
|------------|---|
| | iv) Dump should be created in such a way that there is |
| | no chance of accumulation of water in and around |
| | the base of dump as it will adversely affect the |
| | shear strength of the base material of dump. It must |
| | be ensured that there is no stagnant water at the |
| | toe of dump and the top of the dump. |
| | v) The toe and face of the dump should not be eroded |
| | or cut at any point of time to avoid slope failure. A |
| | suitable toe wall should be created along the dump |
| | periphery. |
| | vi) Formation of dumping should be done in square or |
| | circular or any regular shape as far as possible. |
| | vii) Proper drainage system should be provided to |
| | bring down rain water by construction of inclined |
| | drain on dump face and catch drain on all benches. |
| | viii) During active period of dump, all rain water should |
| | be diverted away from mining site as far as |
| | possible. |
| | ix) Sump and pumping capacity should be sufficient to |
| | accommodate peak surface run-off and seepage of |
| | water. |
| | x) Gabion wall and garland drain should be |
| | constructed and maintained to trap the surface run- |
| | off and sludge coming from dump. |
| | xi) Plantation and grassing should be done on top and |
| | slope of the dump respectively. |
| | xii) Regular monitoring is required for development of |
| | tension crack, gullies, movement of soil mass, |
| | stagnation of water and any other unusual |
| | occurrence. In case of dump movement, rate of |
| | movement of dump should be monitored. Special |

| Parame | eters De | tails |
|--------|----------|--|
| | | attention should be given at curve area/turning area |
| | | of the dump. |
| | 3. | PRECAUTIONS AGAINST DANGER OF |
| | INU | JNDATION FROM SURFACE WATER |
| | 1) | Adequate protection against any danger of inrush |
| | | of surface water into the mine or part shall be |
| | | provided and maintained to the satisfaction of |
| | | DGMS, whose decision shall be final. |
| | 2) | The entrance into the mine shall be so designed, |
| | | constructed and maintained that its lowest point |
| | | (which means the point at which a body of rising |
| | | water on surface can enter the mine) shall be not |
| | | less than 3.0 meters above the highest flood level |
| | | at that point. |
| | 3) | Every year, during the rains constant watch shall be |
| | | kept on the flood levels on the surface of the mine |
| | | and if at any time the levels cross the highest levels |
| | | earlier recorded, such levels shall be marked by |
| | | permanent posts along the edges of water and the |
| | | new highest levels thus observed shall be recorded |
| | | with the date as the highest flood level on the plans |
| | | by an actual survey. |
| | 4) | If water dams or reservoirs are built across rivers |
| | | and water courses on the upstream side of the |
| | | mine, arrangements shall be made for |
| | | communication between appropriate authorities for |
| | | the purpose of ascertaining the quantity and timing |
| | | of water released from the dams which is likely to |
| | | endanger safety of the mine and arrangement for |
| | | similar communication shall be made when water |
| | | level rises on the upstream side which is likely to |
| | | endanger the mine. |

| Parameters | Details |
|------------|--|
| | 5) The highest flood levels and danger levels at least |
| | 1.2 meters below the highest flood level, shall be |
| | permanently marked at appropriate places on the |
| | surface and whenever water rises towards the |
| | danger level at any place, all persons shall be |
| | withdrawn from the mine sufficiently in advance and |
| | for this purpose adequate arrangements of quick |
| | communication to all parts of the mine by effective |
| | systems shall be provided and maintained. |
| | 6) No working shall be made in the mine at any spot |
| | lying within a horizontal distance of 15 meters from |
| | either bank of a river or nala. |
| | 7) A competent person shall, once at least in every |
| | fourteen days during the rainy season and once at |
| | least in every thirty days during other periods of the |
| | year, examine every protective measure provided |
| | under regulations 149, whether in use or not, for |
| | their stability, and a report of every such |
| | examination shall be recorded. The protective |
| | measures and workings shall also be inspected, |
| | once at least in every quarter by the Manager |
| | personally. |
| | A careful assessment is to be made against the |
| | danger from surface water before the onset of rainy |
| | season. The necessary precautions should be |
| | clearly laid down and implemented. A garland drain |
| | needs to be provided to drain away the surface rain |
| | water from coming into the mine. |
| | 8) Standing order for withdrawal of working persons in |
| | case of apprehended danger. During heavy rain |
| | inspection of vulnerable points is essential. In case |

| Parameters | Details |
|------------|---|
| | of any danger persons are to be withdrawn to safer |
| | places. |
| | |
| | 4. PROTECTION OF EQUIPMENT DEPLOYED AT |
| | BOTTOM HORIZONS FROM FLOODING: |
| | During the heavy monsoon period, the mining |
| | operation in the lower-most bench may have to be |
| | stopped. Therefore, it is proposed to drown the lower- |
| | most bench, which would work as a sump. The water |
| | will be pumped out and discharged into the nearby |
| | nala/ river after proper sedimentation. |
| | For ensuring safety of the equipment while working out |
| | bottom horizons with no access to surface profile, the |
| | following measures should be taken: |
| | i) Drivage of initial trenches if any and coal cutting on |
| | bottom benches should be done during the |
| | dry period of the year. |
| | ii) Ramps should be made for quick shifting of |
| | equipment from bottom horizons, liable to be |
| | flooded during monsoon period, to the top horizons. |
| | |
| | 5. PREVENTION OF ELECTRIC SHOCKS: |
| | During mining operations, all the statutory provisions of |
| | the Indian Electricity Rules 1956, and Indian Standards |
| | for installation and maintenance of electrical |
| | equipment etc. should be observed. |
| | 1) For protection from electric shocks to persons, all |
| | electrical equipment with voltage up to 1000V |
| | should be provided with Earth Leakage Relay, |
| | which will automatically disconnect electrical |
| | circuits. |

| Parameters | Details |
|------------|---|
| | 2) Closed mobile substations and switchgears should |
| | be mechanically interlocked which exclude the |
| | possibility of opening the door when oil switch and |
| | air circuit breakers are in operation. |
| | 3) All metal parts of electrical equipment should be |
| | properly earthed to avoid failure of insulation. |
| | 4) All H.T lines and cables located within the blasting |
| | zones should be disconnected during charging & |
| | blasting operations. |
| | |
| | 6. DUST SUPPRESSION & DILUTION OF EXHAUST |
| | FUMES: |
| | For precaution against dust, Regulation 143, 144 and |
| | 145 of CMR 2017 should be observed. Beside this the |
| | following measures should be adopted for dust |
| | suppression at all quarry working places, dumps, haul |
| | roads, CHP and near other auxiliary mining operations. |
| | i) Spraying with water on all working faces & haul |
| | roads, by special spraying machines or water- sprinkler. |
| | ii) While drilling holes, it is necessary to use dust |
| | extraction devices. |
| | iii) Installation of local dust suppression and air |
| | conditioning devices in cabins of excavators and |
| | drilling rigs may be considered. |
| | iv) Leveling of spoil dump surface. |
| | v) Separate dust suppression arrangement should be |
| | provided for CHP. |
| | To prevent collection of harmful mixtures in the |
| | atmosphere, from the different sections of quarry |
| | workings, it is recommended: |

| Parameters | Details |
|------------|---|
| | To spread out the sources of dust formation and |
| | omission of harmful gases throughout the working area |
| | of the quarry, the following precautions should be |
| | taken: |
| | i) Drilling & blasting operations should be timed for |
| | periods of maximum wind activity during the day. |
| | ii) Dumpers may be provided with purifiers for exhaust |
| | gases. |
| | 7. MEASURES TO BE TAKEN FOR FIRE FIGHTING |
| | AND FIRE PREVENTION: |
| | In addition to statutory provisions as laid down in Reg |
| | 135, 139 and 140 of CMR 2017, the measures for |
| | firefighting and prevention of fires are as follows: |
| | i) Organisation of special cell for systematic |
| | observations to examine and prevent fire. |
| | ii) Removal of spillage of coal on benches and |
| | cleaning of coal horizons to prevent cases of coal |
| | heating. |
| | iii) Storage of lubricants and cotton waste in enclosed |
| | fireproof containers in working places. |
| | iv) Provision of fire extinguishers. |
| | 8. MEASURES TO BE TAKEN WHILE DRILLING |
| | BLASTING: |
| | Following measures should be taken during drilling and |
| | blasting operation in the quarry beside the statutory |
| | requirements: |
| | i) Drilling and Blasting in quarry should be done in |
| | accordance with the provisions of Mines Act, rules |
| | and regulations and based on the Standing Orders |
| | for the safe use of explosives. |

| Parameters | Details |
|------------|--|
| | ii) Adequate safety measures have to be taken during |
| | blasting operation in the quarry so that |
| | men/machine is not affected. |
| | |
| | 9. CONSERVATION |
| | Suitable measures should be taken to minimize coal |
| | loss during mining operations. Selective mining of in- |
| | seam dirt bands has been proposed. It is proposed not |
| | to dump any spoil material over coal bearing area, |
| | amenable for mining, at present or even at a future |
| | date. |
| | 10. SCIENTIFIC STUDIES |
| | The slopes of the quarry and dumps have been |
| | proposed on the basis of experience in the adjoining |
| | areas. However, to ascertain optimum slope angles for |
| | stability of quarry batter and dumps a scientific study |
| | need be carried out. Similarly, hydro-geological study |
| | of the area is to under taken as none is available at |
| | present. Studies should also be carried out to ascertain |
| | the pattern of surface drainage, the manner of |
| | diversion of water courses to other water courses away |
| | from the mining area and the dimension of diversion |
| | dams, garland drains and other protective structures to |
| | be constructed. |

CHAPTER 5 INFRASTRUCTURE FACILITIES

| | Parameters | Details |
|-----|----------------|---|
| 5.1 | Mine | Mine is in operation since 1985-86. All infrastructure like |
| | infrastructure | Equipment maintenance planning, Office buildings, |
| | required e.g. | Workshop, Power supply arrangement, Water supply etc. are |
| | Equipment | in place. |
| | maintenance | For this expansion, no separate extra arrangement is |
| | planning, | proposed. |
| | Office | |
| | buildings, | |
| | Workshop, | |
| | Power | |
| | Supply | |
| | arrangement | |
| | , Water | |
| | supply, etc. | |
| 5.2 | Power | The Project is receiving power at 33 kV from Nigahi Sub- |
| | supply & | station of 132/33 kV MPEB located in Jayant, Distt. Singrauli |
| | illumination | (M.P). |
| | | Nigahi Coal Substation is also being fed through 02 nos. 33 |
| | | kV feeders drawn from OB east Sub-station and the circuit |
| | | length is around 3 km. The existing CHP loads of are being |
| | | fed through 3 x 10 MVA, 33 kV/6.6 kV receiving power |
| | | through double circuit 33 kV feeder emanating from OB east |
| | | Sub-station. |
| | | Nigahi OB West Sub-Station receives power from Nigahi |
| | | Sub-Station through double circuit overhead lines of 33 KV |
| | | and OB East Sub-station receives power from OB West Sub- |
| | | Station through double circuit overhead line of 33KV. |
| | | Nigahi OB East and OB West Sub-station supply power to |
| | | HEMM like draglines, shovels, drills etc. The Coal Sub- |

| | Parameters | Details |
|-----|----------------|--|
| | | stations supplies power to HEMM deployed in coal section, |
| | | pumping, CHP, workshop etc. |
| | | Nigahi Colony Sub-station is of capacity of 1X10 MVA, 33/6.6 |
| | | KV and 1X5 MVA, 33/6.6KV and is being fed from |
| | | Nawanagar Sub-station of 132/33KV system voltage. The |
| | | colony Sub-station supplies power to colony, GM office, |
| | | shopping complex etc. |
| 5.3 | Drainage & | Pumps, Pipes and Fittings: |
| | Pumping: | Pumping system has been designed for the volume of water |
| | Assessment | accumulated in the mine and the target plus five year |
| | of volume of | production considering maximum rainfall in a day as 214mm. |
| | water for | Peak Pumping Quantity is worked out to be 1156025 m ³ , the |
| | Pumping, | de-watering will be 5 day with 20 hr pumping every day. Thus |
| | Pumping | pumping capacity required is 11560 m ³ . |
| | Capacity | Drainage of Water on Surface |
| | | Fresh garland drains shall be made before every monsoon at |
| | | the peripherally of active edge of the quarry to prevent the |
| | | surface rain water to enter the quarry. |
| | | A sedimentation pond/lagoon shall be made between the |
| | | qualities and mine water will be discharged into it. After |
| | | sedimentation of suspended particles, the fresh water will be |
| | | discharged in to river/nalla. |
| 5.4 | Coal | COAL HANDLING ARRANGEMENT |
| | Handling | Existing CHP of 15 Mtpa (4.2Mtpa Phase-I and 5.8 Mtpa |
| | Arrangement | Phase-II and 5 Mtpa Phase-III) has already been constructed |
| | : Brief detail | and is in operation. Existing CHP broadly has the facilities of |
| | of CHP/ | four number of receiving and crushing complex, two number |
| | Mode of | of bunkers for storage and reclamation, two silos with rapid |
| | Dispatch, | loading system, and associated conveyor system. |
| | Coal quality | |
| | and coal | |

| | Parameters | Details |
|-----|--|--|
| | staking and handling arrangement | Two CHP each of 5 Mtpa namely West (Turra or Purewa coal) & East (Purewa coal) has been proposed. In the West section, it is proposed to install one number semi -mobile primary crushing plant and subsequently one number twin shaft secondary sizer for blasted coal and five nos receiving hoppers (Cap 100 Te each) for surface miner coal along with required conveyor system of 1600 TPH rated capacity (peak capacity 1920 TPH). In the East (Purewa coal) section, it is proposed to install five nos receiving hoppers (Cap 100 Te each) for surface miner coal along with conveyor system of 1600 TPH capacity (peak capacity 1920 TPH). In the East (Purewa coal) section, it is proposed to install five nos receiving hoppers (Cap 100 Te each) for surface miner coal along with conveyor system of 1600 TPH capacity (peak capacity 1920 TPH). Total handling capacity of the CHP including existing and pro-posed will be 25 Mtpa (15 Mtpa existing + 10 Mtpa incremental proposed) which will cater the target coal of 25 Mtpa. Incremental CHP (10 Mtpa) is under construction. |

F. No. J-11015/79/2013-IA-II(M).

Government of India

Ministry of Environment, Forest and Climate Change (Impact Assessment Division)

2nd Floor Vayu Wing, Indira ParyavaranBhawan, Jorbagh Road, N Delhi – 3 Email: <u>lk.bokolia@nic.in</u> Tel: 011-20819417

Dated: 25th July, 2022

То

The General Manager (Nigahi Project), M/s Nothern Coalfields Ltd, Project, PO- Nigahi, Distt-Singrauli-486884, Madhya Pradesh Email: <u>gmenv@ncl.gov.in</u>; gmenv_ncl@coalindia.in, nigahi.environment@gmail.com

Sub: Expansion of Nigahi opencast coal mining project for increase in production capacity from 21 MTPA to 22.5 MTPA (increase of 10% w.r.t 1.5 MTPA) in land area of 3018.4 Ha by Northerns Coalfields Ltd, located in the village Nigahi, Tehsil Singrauli, District Singrauli (M.P.)- Environmental Clearance under OM vide no. F. No. IA3-22/10/2022-IA.III 07.05.2022- [Availing total 50% relaxation of OM dealing with exemption of public hearing under clause 7 (ii) of EIA notification].

Sir,

This has reference to your online proposal No. IA/MP/CMIN/271744/2022 dated 9th July, 2022 submitted to this Ministry for grant of Environmental Clearance (EC) in terms of the provisions with MoEF & CC's Office Memorandum vide no. F. No. IA3-22/10/2022-IA.III (E 177258) dated 07.05.2022 and as per EIA Notification, 2006) of the Environment Impact Assessment (EIA) Notification, 2006 under the Environment (Protection) Act, 1986 for Expansion of Nigahi opencast coal mining project for increase in production capacity from 21 MTPA to 22.5 MTPA (increase of 10% w.r.t 1.5 MTPA) in land area of 3018 Ha by Northerns Coalfields Ltd, located in the village Nigahi, Tehsil Singrauli, District Singrauli (Madhya Pradesh).

2. The proposal was granted EC for production capacity of 15 MTPA in ML area of 3036.4 Ha dated 08.05.2007. Further EC was granted for expansion under Clause 7 (ii) of EIA notification, 2006 on 19.03.2015 as per the O. M. dated 19.12.2012 for 25 % expansion i.e. 18.75 MTPA production capacity in ML area of 2675 Ha and EC was granted on 03.02.2020 as per O.M. dated 15.09.2017 for 12% expansion (total 40%) i.e. 22.5 MTPA in an area of 3018.4 Ha. Presently the proposal is considered by the Ministry at central level in view of the exigency, as per the provisions of O.M. F. No. IA3-22/10/2022-IA.III dated 07.05.2022. Abeyance vide MoEF&CC's OM dated 28.01.2022 on OM no. 22-23/2018-IA.III(Pt.) dated 31.10.2019 on mechanism for consideration of proposal of critically/ severally polluted area. Abeyance on above OM has been lifted vide OM dated 05.07.2022.

3. Based on the submission of Project Proponent, Ministry hereby grants approval to Expansion of Nigahi opencast coal mining project for increase in production capacity from 21 MTPA to 22.5 MTPA (increase of 10% w.r.t 1.5 MTPA) in land area of 3018 Ha by Northern

us

EC Identification No. - EC22A042MP180012 File No. - J-11015/79/2013-IA-II(M) Date of Issue EC - 26/07/2022 Page 2 of 4

Coalfields Ltd, located in the village Nigahi, Tehsil Singrauli, District Singrauli (Madhya Pradesh) under the provisions of OM vide no. F. No. IA3-22/10/2022-IA.III 07.05.2022, under the Environment Impact Assessment (EIA) Notification, 2006 and subsequent amendments/circulars thereto subject to the compliance of the following terms & conditions / specific conditions for environmental safeguards as stated below:-

- PP shall submit Certified Compliance Report of the EC vide No. F. No. J- J-11015/79/2013-IA-II(M) dated 19th March, 2015 and 3rd February, 2020 granted for total 40% expansion, along with EIA/EMP report, prepared based on standard ToRs for the additional capacity of 10% on PARIVESH portal within six months of enhancement of production beyond 40%.
- ii. In view of above (i), Ministry shall ascertain the adequacy of the proposed environmental safeguards and stipulate necessary conditions, if required, which shall be monitored as a part of the EC compliance monitoring.
- PP shall obtain necessary prior consent for enhanced capacity from State Pollution Control Board under Air and Water Act.
- iv. Environmental quality parameters arising out of proposed expansion shall be within the prescribed norms and the same shall be maintained as per prescribed norms.
- V. Hon'ble Supreme Court in an Writ Petition(s) Civil No. 114/2014, Common Cause vs Union of India & Ors vide its judgement dated 8th January, 2020 has directed the Union of India to impose condition in the mining lease and a similar condition in the environmental clearance and the mining plan to the effect that the mining lease holders shall, after ceasing mining operations, undertake re-grassing the mining area and any other area which may have been disturbed due to their mining activities and restore the land to a condition which is fit for growth of fodder, flora, fauna etc. Compliance of this condition after the mining activity is over at the cost of the mining lease holders/Project Proponent".
- vi. All other terms and conditions as prescribed in Ministry's letter dated 08.05.2007, 19.03.2015 and 03.02.2020 shall remain the same and need to be complied by PP.

Additional Specific conditions as the area falls under Severely Polluted Areas (SPAs)

(i) Transportation of materials by rail/conveyor belt shall be implemented

(ii) Encourage use of cleaner fuels for trucks, If the roads required to be widened upto nearest railway siding, the same be constructed to avoid traffic congestion.

(iii) Increase green belt cover by 40% of the total land area beyond the permissible requirement of 33%, wherever feasible.

(iv) Greenbelt outside the project premises such as avenue plantation, plantation in vacant areas, social forestry, etc. shall be implemented.

(v) Assessment of carrying capacity of mine & road transportation shall be done as per the State Plan/instructions.

(vi) Reuse/recycle of treated wastewater shall be implemented as feasible with latest technology. Zero liquid discharge concept may be adopted.

(vii) PP to install Continuous monitoring station for ambient air quality and also continuous effluent quality in ETP shall be installed. Data so generated shall be linked with respective SPCB and CPCB websites.

EC Identification No. - EC22A042MP180012 File No. - J-11015/79/2013-IA-II(M) Date of Issue EC - 26/07/2022 Page 3 of 4

(viii) A detailed water harvesting plan may be prepared by the project proponent for water augmentation and submitted to Regional Office of MoEF&CC.

(x) The project proponent shall install STP for generated domestic wastewater and should meet for discharge standards.

(xi) More stringent norms for management of hazardous waste like oil container, ETP sludge etc shall be adopted. The waste generated should be preferably utilized in co-processing.

(xii) Monitoring of compliance of EC conditions may be submitted with third party audit every year.

(xiii) Fund allocation for Corporate Environment Responsibility (CER) which is atleast 1.5 times as per OM of 1st May, 2018 may now be considered as 1.5 times of fund allocated on commitment made during public consultation process for incorporating in EIA-EMP for deliberation of EAC and item-wise details along with time bound action plan shall be prepared and submitted to the Ministry's Regional Office.

This issues with the approval of the competent Authority

3(three) times of the rated Capacity of the current Approved Mining Plan; b. Change in method of mining from Opencast to Underground necessitated due to change in geo-mining conditions. However, revision of Mining Plan for extraction of less coal would be subject to prior approval of the Nominated Authority.

- 1.11. The approval of the revised Mining Plan shall not result in changes in the terms and conditions or efficiency parameters mentioned in the CMDPA/Allotment Agreement signed at the time of allotment/vesting for the auctioned/allotted blocks without prior approval of the nominated authority or Central Government, as the case may be. However, efficiency parameters mentioned in the CMDPA/Allotment Agreement shall be linked to the rated capacity of the mine.
- 1.12. The project proponent shall envisage the action plan for exploration and liquidation of the balance reserve yet to be projectised.
- 1.13. The project proponent shall take all necessary precautions regarding safety of mine workings and persons deployed therein and shall adhere to all the statutory clearances with regards to safety.
- 1.14. Proposed project area envisaged in the mining plan shall not encroach into any other adjacent coal block unless permitted to do so by the Ministry of Coal in writing.
- 1.15. The approval of the Mining Plan is without prejudice to the requirement of approvals from competent /prescribed authority under the relevant rules/ regulations etc.
- 1.16. The project proponent shall submit an undertaking that the mine shall be operated as per the Environment Clearance (EC) & Forestry Clearance (FC) for the project.
- 1.17. Uvc wwqt { 'Qdtli c vlqp<'Vj g'legal obligations, if any, which the lessee is bound to implement, like special conditions imposed while execution of lease deed, approval of Mining Plan, conditions imposed by the Ministry of Environment, Forest and Climate Change (MoEF&CC), Central Pollution Control Board (CPCB), State Pollution Control Board (SPCB), Directorate General of Mines Safety (DGMS) or any other organizations describing the nature of conditions and compliance positions thereof, should be indicated in the Mining Plan.
- **40' O kpg'emuwt g'Rm pu**<'Mine Closure Plans will have two components viz. i) Progressive or'' Concurrent Mine Closure Plan, and ii) Final Mine Closure Plan. Progressive Mine Closure Plan would include various land use activities to be done continuously and sequentially during the entire period of the mining operations, whereas the Final Mine Closure activities would start towards the end of mine life, and may continue even after the reserves are exhausted and/or mining is discontinued till the mining area is restored to an acceptable level. The Mine closure details of the Mining Plan should be oriented towards the restoration of land back to its original as far as practicable or further improved condition.
- 2.1. Mining is to be carried out in a phased manner along with reclamation and afforestation work in the mined-out area.

Progressive mine closure plan shall be prepared for a period of every five years from the beginning of the mining operations. These plans would be examined periodically in every five years period and to be subjected to third party monitoring by the agencies approved by the Central Government, like Central Mine Planning and Design Institute Ltd. (CMPDIL), National Environmental Engineering Research Institute (NEERI), Indian Institute of Technology (IIT-ISM) or any other institutes/ organizations/ agencies specified from time to time for the purpose.

2.3. Various project specific activities viz. mined-out land details & their technical and biological restoration plan, water quality management, infrastructure to be retained and demolished, disposal of mining machinery, etc. shall be furnished in the relevant paras. Where the backfilling of the mine void is being carried out as part of regular mining operation, it shall not be included in the list of progressive mine closure activities. However, in case, where the backfilling of mine void is to be carried out specifically for closure of the mine, quantum of such overburden and the mine closure fund earmarked for the purpose must be included in the list of activities to be taken up for mine closure in the mining plan at the time of submission itself.

- 2.4. The Government may at any time before the closure of mine require certain activities to be included in the mine closure plans, which it may consider necessary for the safety and conservation of environment, or in compliance with any modification/ amendment in the relevant legislation.
- 2.5. Cdcpf qpo gpv'equv<'The total cost for carrying out such activities shall be estimated for assessment of abandonment cost of the mine involving progressive and final mine closure activities such as barbed wire fencing all around the working area, dismantling of structures/demolition and cleaning of sites, rehabilitation of mining machinery, plantation, physical/biological reclamation, landscaping, biological reclamation of left-out overburden dump, filling up of de-coaled void, post environmental monitoring, supervision charges, power cost, protective and rehabilitation measures including their maintenance and monitoring, miscellaneous charges etc. for the specified post closure period.
- 2.6. **Guet qy 'Ceeqwpv'E crewr vkqp**<'In August 2009 it was estimated that typically closure cost for an opencast mine was around rupees six lakhs per hectare of the total project area and rupees one lakh per hectare for underground project area at the-then price level. Accordingly vide letter dated 7th January 2013 a guideline for mine closure was issued which needed modification in these rates based on the wholesale price index ***Y RK**'as notified by Government of India from time to time while preparing the Mining plan and Mine Closure Plan. The escalated rate (based on the current base year i.e. 01.04.2019) is Rupees Nine Lakh per hectare in opencast and Rupees one lakh fifty thousand per hectare for underground Mine. These rates will be considered as Base Rate to be applicable from 01.04.2019, which may change as specified from time to time by the Government of India.

[Exemplary Calculation: [(Rs 6 lakhs x 1.561 linking factor for base year 2004-05 x WPI 121.1 as on April 2019) / (WPI as on August 2009)] = Rupees 8.75 lakh, rounded to Rupees 9 (nine) lakhs per hectare in case of Opencast project].

Henceforth, these rates will stand modified based on the wholesale price index (WPI) as notified by Government of India from time to time. Annual closure cost is to be computed considering the total project area of the mine multiplied by escalated rate (at the above mentioned rates) and dividing the same by the balance life of the mine in years. An amount equal to the annual cost is to be deposited each year throughout the mine life compounded @5% annually.

[For example if the annual cost works out to Rs 100, then in the first year the amount to be deposited will he Rs 100, in the second year 100x(1+5%)%1, in the third year $100x(1+5\%)^2$ and so on.]

Further, in case of the mine, where escrow account is already open, the annual closure cost is to be computed considering the total project area at the above mentioned rates minus the amount already deposited and dividing the same by the balance life of the mine in years and annual cost as arrived should be compounded @5% annually.

- 2.7. **HpcpekchCuwt cpeg**<The Mining Company/ Mine Owner as a part of Financial Assurance will open a Fixed Deposit Escrow account, with the Coal Controller Organization (on behalf of the Central Government) as exclusive beneficiary prior to commencement of any activities on the land/project area of the mine and shall submit the same to Coal Controller Organization (CCO) before the permission is given for opening the mine. The mining company shall cause the payment to be deposited at the rate computed as indicated at Para 2.6. The owner of the company may select the Schedule Bank where the Escrow account is to be opened and inform the same to the Coal Controller, CCO, Kolkata.
- 2.8. Coal Controller, Kolkata shall get the WPI (used for escalation of closure cost at the time of formulation of Mining plan) updated, at the time of opening of Escrow account. The mine owner/ company including all public/ private sector companies shall deposit the yearly amount in a Schedule Bank in accordance with Para 2.6. Coal Controller, **Mqmc vc'lj cm'cnq'l gv'lj g**

information, submitted under to para 1.2, verified and get the yearly closure cost modified ith respect vq'vj g'ir vguv'Y RKlp'ceeqtf cpeg'y kj 'r ctc'2.6.

- 2.9. Final Mine Closure: The details of the Mining Plan (covering Final Mine Closure Plan envisaging the details of the updated cost estimates for various mine closure activities and the Escrow Account already set up, shall be submitted to the approving authority for approval at least five years before the intended final closure of the mine.
- 2.10. Final Mine Closure would be considered to be completed only after acceptance of the third-party audit report by the Coal Controller on the compliance of all provisions of Mine Closure Plan. Any Institute/ Organization/Agency as may be specified by the Government for this purpose may be engaged for Third Party audit to create a self-sustained ecosystem. Failure of restoration within the specified period may result in forfeiture of Escrow Account created as per Para 2.6& 2.7. The details of the Final Mine Closure Plan along with the details of the updated cost estimate for various mine closure activities and escrow account already set up shall be submitted at the time of approval of final mine closure plan.
- 2.11. Vlo g'Scheduling for cdcpf qpo gpv<'The Action plan for carrying out all abandonment operations (progressive and final mine closure) should be furnished in the form of bar chart for a period of life of the mine plus post closure period. Post closure period shall be taken as3 (three) years for Underground mines and Opencast mines having stripping ratio lesser than 6(six) MM³/Te & 5 (five) years for mines having stripping ratio more than 6(six) MM³/Te.
- 2.12. Korngo gpvcvkqp'qhlvj g'crrt qxgf 'O kpg'Enquvt g'Rrp'tj cmddg'tqng't gur qpuklkkv{ 'qhlvj g'b kpg qy pgt 0Mining is to be carried out in a phased manner i.e. continuation of mining activities from one phase to other indicating the sequence of operations depending on the geo-mining conditions of the mine. Up to 50% of the total deposited amount including interest accrued in the ESCROW account may be released after every five years in line with the periodic examination of the Closure Plan as per Para 2.2. The amount released should be equal to expenditure incurred on the progressive mine closure in past five years or 50% whichever is less. The balance amount shall be released to mine owner/leaseholder at the end of the final Mine Closure on compliance of all provisions of Closure Plan. This compliance report should dg'f wf 'thi pgf 'by the lessee and certify that said closure of mine complied all statutory rules, regulations, orders made by the Central or State Government, statutory organisations, court gw0kpf 'egt whlgf 'by the Coal Controller.''
- 2.13. **Tgr qpuklkks{** 'bf **yj g'**mine **qy pgt < K'** is the responsibility of the mine owner to ensure that the protective measures contained in the mine closure **r mp'lpensf kpi 't genc o csqp'cpf** 'tehabilitation works have been carried out in accordance with the approved mine closure plan and final mine closure plan.
- 2.14. The owner shall submit to the Coal Controller a yearly report before I st July of every year setting forth the extent of protective and rehabilitative works carried cut as envisaged in the approved mine closure plans (Progressive and Final Closure Plans).
- 2.15. The money to be provided per hectare of total Project Area for the purpose is to be deposited every year on commencement of any development activity on the land for the mine after opening a Fixed Deposit Escrow Account prior to obtaining mine opening permission from Coal Controller. Mining company/owners including all Public Sector Undertakings shall deposit the yearly amount in a Scheduled Bank. If the Mine owners fail to deposit the required annual amount in accordance with Para 2.6, 2.7 & 2.8, the Government can withdraw the mining permission.
- 2.16, The funds so generated are towards the security to cover the cost of closure in case the mine owner fails to complete the relevant closure activities. The prime responsibility of mine closure shall always lie with the mine owner, and in case these funds are found to be insufficient to cover the cost of **hpcrlb lpg'enuwt g'lpenwf lpi '\j g'ct gcu'**covered in Para 2.3 2.6, 2.7, 2.8 & 2.9 above. The mine owner shall undertake to provide the additional fund equivalent to the gap in

funding before five years of Mine Closure failing which it may be recovered by such other methods as the competent authority may deem fit in this regard.

- 2.17. **HlpcriEnquwt g'Egt villec vg<'**The Mine owner shall be required to obtain a mine closure certificate from Coal Controller to the effect the protective, reclamation, and rehabilitation work in accordance with the approved Mining plan covering final mine closure provisions/activities have been carried out by the mine owner for surrendering the reclaimed land to the State Government.
- 2.18. The balance amount at the end of the final Mine Closure shall be released to mine owner on compliance of all provisions of Closure Plan duly signed by the mine owner to the effect that said closure of mine complied with all statutory rules, regulations, orders made by the Central or State Government, statutory organizations, court etc. and duly certified by the Coal Controller. This should also indicate the estimated extractable coal reserves and coal actually mined out.
- 2.19. If the Coal Controller has reasonable grounds for believing that the protective, reclamation and rehabilitation measures as envisaged in the approved mine closure plan in respect of which financial assurance was given has not been or will not be carried out in accordance with mine closure plan, either fully or partially, the Coal controller shall give the mine owner a written notice of his intention to issue the orders for forfeiting the sum assured at least thirty days prior to the date of the order to be issued after giving an opportunity to be heard.

Subject: Permission for selling of M-sand obtained through Processing of Overburden materials generated from Nigahi Project, NCL.

Sir.

Keeping in view of huge requirement of sand in the Singrauli and nearby district, Northern Coalfields Limited (NCL), a subsidiary of Coal India Limited has taken a new Sustainable Initiative towards producing M-sand by processing the overburden materials removed during the extraction of coal. This initiative has been taken under the directives of the Ministry of Mines (Copy enclosed as Annexure-1) and Ministry of Coal. Under the Sustainable Development Cell (SDC), Ministry of Coal has a continuous thrust on ensuring alternative usage of overburden materials by all the coal companies. As per the DO letter vide ref no. SDC/50/2020-SDC did. 28th May 2021 received from Secretary (Coal), NCL has been asked to expedite its efforts regarding utilization of Overburden materials (Copy enclosed as Annexure-2).

The Overburden materials generated from the mines consists mainly of Sandstones and Shales. Among these two, sandstones predominate. Sandstone is the rock formed by cementing of sands composed of largely of quartz and silicate minerals. IIT Kharagpur undertook study on characterization of OB material and its alternate application; the study found that on an average 89.70% SiO2 and a minimum of 83% sand equivalent was present in the sandstone sample of adjacent mines (having similar stata) (Relevant portion of the study enclosed as Annexure 3). It may further be noted that utilization of OB material has also been mentioned in the conditions under CTE/CTO granted from MoEF & CC for 22.5MTPA coal production for Nigahi OCP.(Copy of concent letters attached as Annexure-4). Scope at NCL

As on date, NCL has already produced more than 123 MT of coal and removed in excess of 430 Mcum of Overburden with a stripping ratio of more than 3 in the FY 2022-23. Further with the increase in coal production at NCL, the overburden removal will also increase, hence this alternative utilization of Overburden into sand will not only pave the way restoring natural resources but it will also help in generation of additional space for dump accommodation in internal dumps and may address the issue of shortage of space for dumping which is of grave concern particularly at Nigahi OCP.

Utilization of M-sand:

Construction activities: M-Sand will adhere to IS-383 specifications and can be used in Manufacturing of Cement Concrete, Cement Mortar for brickwork and plaster.

In view of the above, you are hereby requested for giving permission for selling of M-Sand obtained through processing of Overburden materials generated from Nigahi OCP.

Encl: - |. As above

2. Revenue plan showing location of the site earmarked for OB to sand plant installation, attached as Annexure-5.

Yours faithfully

11/03/2023 Area General Manager Nigahi Area
