

M/S BUSHAHR LAGHU UDYOG

(Stone Crushing and Screening Plant)

Producer and Supplier of Sand, Aggrigate and all type of Building Material

Plant Site:-Pashada Khad, P.O. Khanari,Tehsil Rampur Bsr, Shimla HP

Head Office: - V.P.O Jhakri, Tehsil Rampur Bsr, Shimla HP-172201

Contact No: - 9816335001, 9418608409 **Email** id:-cheshwerl979@gmail.com

To

The Divisional Officer,
Rampur Forest Division.

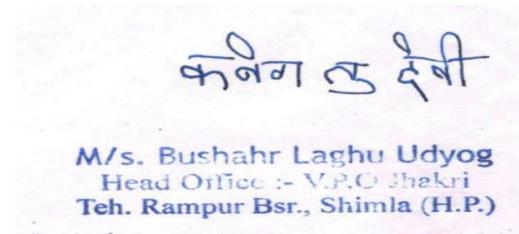

Sub:- **Diversion of 2.1532 Ha. of forest land (1.4612 Ha. for mining lease and safety zone, 0.3400 Ha. for approach road and 0.3520 Ha. for stacking of raw material) for already established stone crusher at Pashada, P.O. Khaneri, Tehsil Rampur Distt. Shimla HP in favour of Bushahr Laghu Udyog.**

Sir,

This is with reference to the CF, Rampur letter No. 1884 Dated 26.07.2023 on the subject cited above. In this context this is to inform you that the EDS raised by CF Rampur has been attended as below:-

Sr. No.	Observation	Reply
1.	Point No. 1 (iv), In reply to this observation you have submitted the same reply as submitted earlier vide your office letter No. 8514 dated 24.03.2023. It needs comments on the proposed mining from your office.	Pertains to DFO Office
2.	Point No. 4, In reply to this observation you have submitted the same reply as submitted earlier vide your office Memo No. 8514 dated 24.03.2023. It needs comments from your office on the update status of EC with documentary evidence.	The process of obtaining EC is under process and will be provided before Stage-II approval and as per requirement of SEIAA the EC will be issued after getting FCA clearance. Documents for the same is attached and uploaded on the portal.
3.	Point No. 7, In reply to this observation now you have intimated the average width of road 3 Mtrs instead of 14 Mtrs and 4 Mtrs respectively as intimated earlier. But from the perusal of the Page -37 you have mentioned the average width of road 5 Mtrs. If the average width of road is presumed as 3 Mtrs to 240 Mtrs length of road then the forest land required will be 0.0720 Ha. instead of 0.3400 Ha. This needs to be clarified	The average width of the road is 9 Mtrs and revised Checklist No.-23 has been attached and uploaded on the Portal.

	and documents needs to be corrected accordingly.	
4.	Point No. 8, You have intimated that the crusher site and crusher unit is 25 Mtrs away from mining area instead of 200 Mtrs and the discrepancy has been corrected and placed at Page No. 22. But from the perusal of Page-22 no such document found attached.	Page No-22 of Mining Plan uploaded as Annexure-IX in Additional Information detail at Sr. No. 30 on the Portal.

CHECKLIST NO.-23

Detail Regarding Length & Width of Road		
1.	Total Length of the Road	377.77 Mtr.
2.	Width of The Road	Average 9 Mtrs.
3.	Length of the Road Passing Through Forest Area	377.77 Mtr.
4.	Length of the Road Passing Through Non-Forest Area	Nil
5.	Length of the road already existing/connected out of the total length involved in the proposal	Nil
6.	Total Area Required for Road in Ha.	0.3400 Ha.

Place:

Date:

The year wise detail of mine waste is as follows: -

Year	Mine Waste (MT)	Top Soil (MT)
1st Year	911	607
2nd Year	671	448
3rd Year	895	596
4th Year	829	553
5th Year	800	533
Total	4105	2737

The total of 6842 MT of mine waste will be generated during the five year of mine work. This mine waste along with top soil will be used to establish green belt in the lease area in order to reclaim the land as forest land.

1.8. End use of Mineral

The mineral will be used for making angular grit of various sizes in the already established stone crusher unit in the name and style 'M/S Bhushahar Laghu Udyog' and after making the angular grit the mineral will be sold in the open market.

1.9. Detail of Road Transportation Density

The lease is located in the revenue estates of Racholi Panchyat, tehsil Rampur Bushehar, district Shimla, Himachal Pradesh and the crusher site is at the khasra number nearby (about 25 meters) to lease area. The highway from the lease area i.e. 107 meters away and is in good condition enough to bear the additional truck/transport created by operation in the mine. As per proposed rate of production i.e. 26000 MT (average) per year or as explained in the point 4.3. The loading of the mineral will be done directly to the tipper along the hill slope by the loading chutes. Taking into consideration, 300 working days in the mine, 86 MT stone will be produced per day for which 9-10 tippers would be used to carry the mineral to the filling site.
