

~~SECRET~~**CONCEPT NOTE**

Design, Build, Operate & Transfer for the work of

DRINKING WATER SUPPLY SCHEME TO RURAL HABITATIONS AND TOWN OF PAVAGADA TALUK IN TUMKUR DISTRICT, RURAL HABITATIONS AND TOWN OF MOLAKALMURU TALUK IN CHITRADURGA DISTRICT, RURAL HABITATIONS OF CHALLAKERE TALUK IN CHITRADURGA DISTRICT, UJJINI & 216 HABITATIONS OF KUDLIGI TALUK IN BALLARY DISTRICT, CHILAKANAHATTI & 14 HABITATIONS OF HOSPET TALUK IN BALLARY DISTRICT AND ADDITIONAL TURUVANUR & 59 HABITATIONS OF CHITRADURGA TALUK IN CHITRADURGA DISTRICT, KARNATAKA STATE, INDIA.

(Part of Special conditions of Contract)

1.0 OVERALL DBOT TENDER SCOPE AND IDEA

Traditionally, the projects for water supply are tendered in terms of what is known as "Item Rate" tender. In other words, the Detailed Scheme Report (DSR) and detailed design and technical estimate of the work is drawn-up in advance by the agency calling the tender. The bidders, in such a case, executes the already designed water supply scheme and bidding is basically on the cost of execution of a known design and DSR.

In the present case the tender is for (i) Design (ii) Build (iii) Operate & (iv) Transfer.

This methodology of tender has been selected for the following reasons;

Pavagada scheme is a "Greenfield" water-supply project. Therefore, there are viable multiple alternatives in terms of design and technology (within the overall standards as laid down by CPHEEO & Other Guidelines / Standards).

Further, the size of the project is large and habitations in Pavagada taluk, Challakere taluk, Molakalmuru taluk, Kudlgi taluk, Hospet taluk and Chitradurga taluk and Pavagada and Molakalmuru towns are covered. This means the design options are multiple.

Tamil Nadu Water Supply & Drainage Board (TWAD) has executed DBOT projects on similar scale and experience has shown that the approach of DBOT can give more optimal solutions in terms of design and cost and also reduce execution time of the large water-supply projects.

KUIDFC has also used DBOT method to execute "Davangere Town Sewerage Treatment Plant".

In the same lines, RDW&SD, Karnataka is implementing one such mega water supply scheme covering all the habitations of Gadag District and the work on the same is nearing completion.

In this context the Cabinet approval has been accorded for implementation of this project on DBOT based tender.

The (a) source of water, (b) population to be catered and their location (the water requirement at destination habitations) shall be made available to the DBOT bidders as input data.

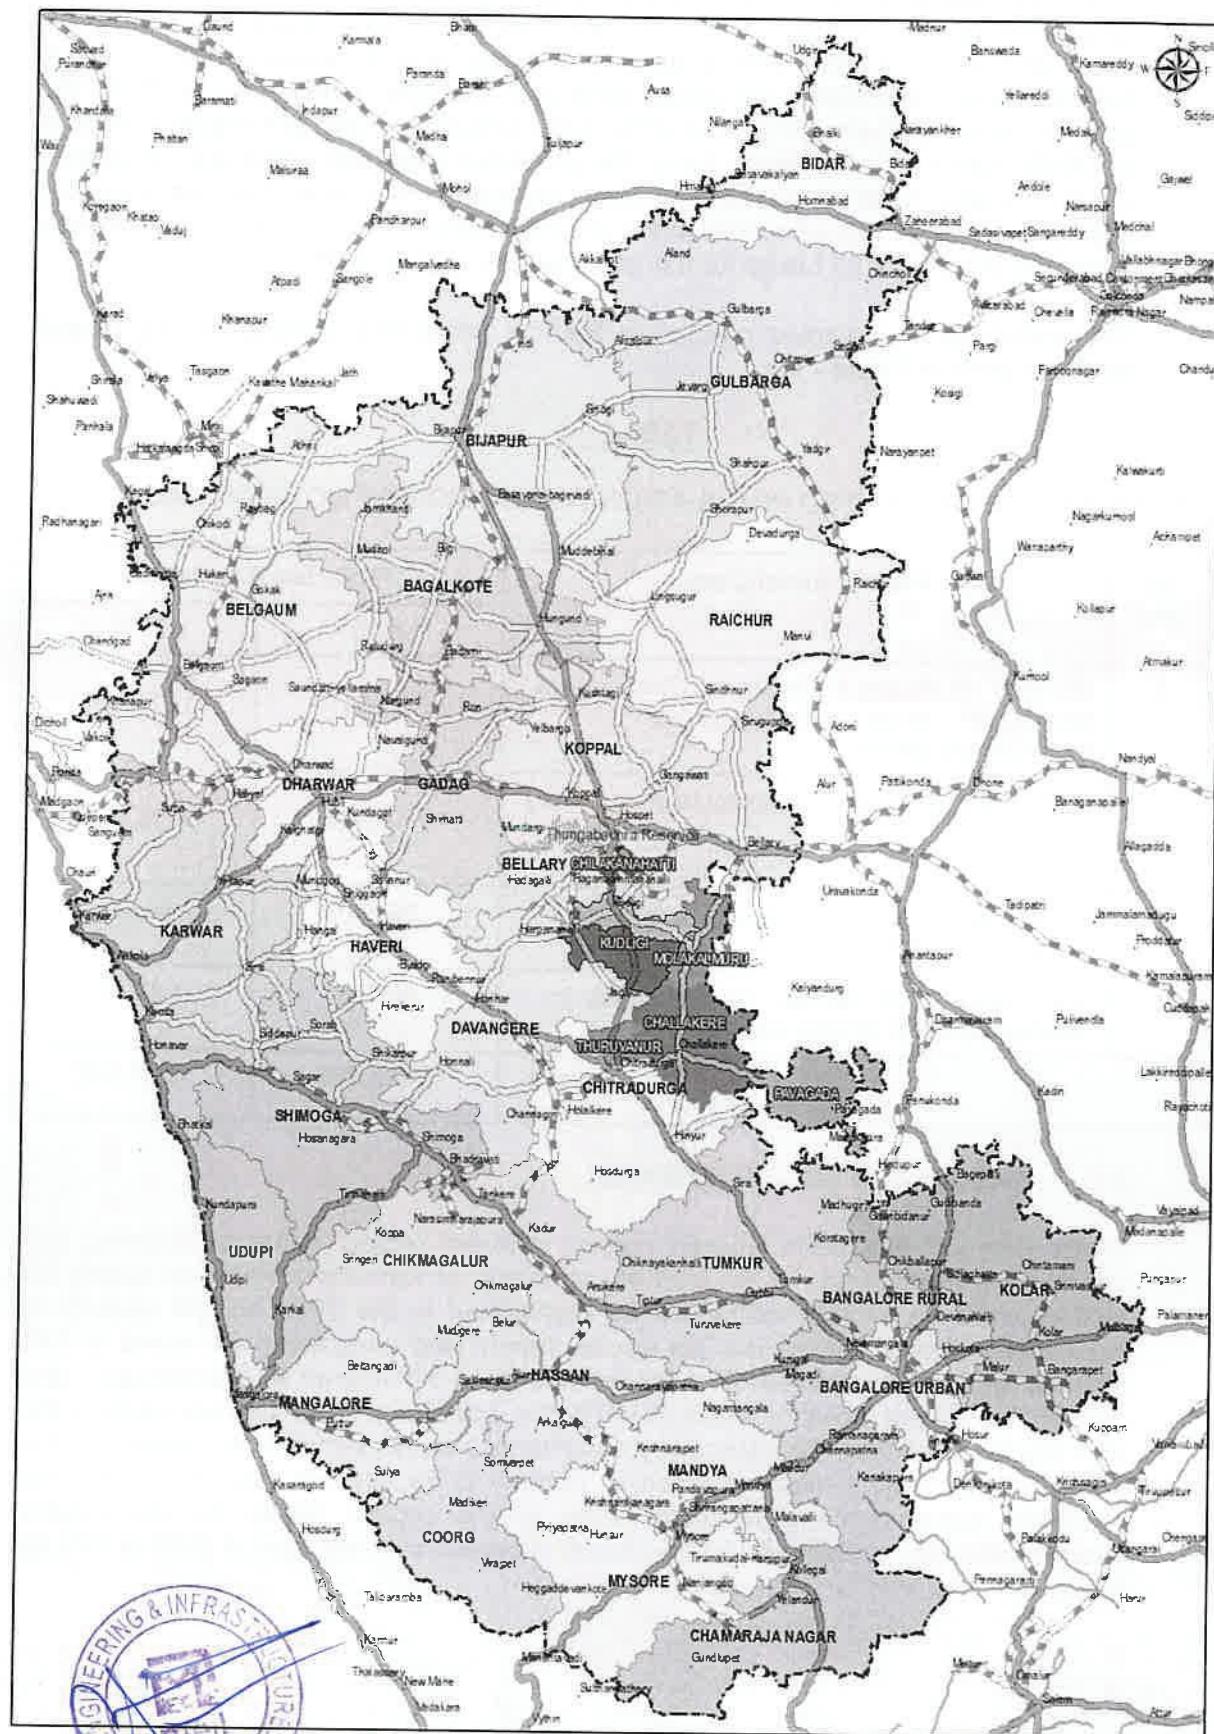

It is expected that bidders shall propose and prepare an optimal design to meet the water supply requirement and actually prepare a Scheme Report as accurate as possible which will be the basis of Contract. This Scheme Report shall be submitted as part of the Technical Bid and same shall be evaluated by a Committee

 Rural Drinking Water & Sanitation Circle,
 Bangalore.

3.1 POPULATION PROJECTION:

Projected population for different project years for each of the census village was calculated by various methods considering past population values for years 1991, 2001 and 2011. As the said project is a mega project covering 1163 Nos. of habitations and two towns, the design base year has been considered as 2020. The project intermediate design year shall be 2035 and project ultimate design year shall be 2050. Based on past growth trend, the projected population value are considered for each village as per projection methods. As seen in said table, the total projected population of habitations covered in the project taluks is 17.31 Lakhs for the ultimate year of 2050 and 14.52 Lakhs for the intermediate year of 2035.

The summary of projected population for the habitations covered in the project taluks is given in **Table - 1**.

TABLE - 1

SUMMARY OF PROJECTED POPULATION FOR DESIGN OF COMMON FACILITY

Sl. No.	Project Beneficiary	Projected Population	
		2035	2050
1.	872 Nos. of villages in Pavagada, Challakere & Molakalmuru taluks and Pavagada& Molakalmuru towns	9,90,861	11,56,483
2.	Ujjini and 216 villages in Kudlgi taluk of Bellary district	3,34,366	4,12,800
3.	Chilakanahatti and 14 villages in Hospet taluk of Bellary district	36,190	44,558
4.	Thuruvanur & 58 number of habitations in Thuruvanur Hobli of Chitradurga Taluk	90,973	1,07,476
Total =		14,52,390	17,21,317

3.2 PROJECTED WATER DEMAND:

Water demand has been worked out for different project years considering per capita water supply rate of 85 lpcd as per Govt. of Karnataka vision to supply 85 lpcd of water to all the habitations as highlighted in the 2016 budget speech of Honorable Chief Minister. The per capita supply rate considered for towns is 135 lpcd. As generally practiced, 20% losses has been considered as transmission and distribution losses. Loss of water in WTP has been minimized by recirculating the filter backwash water. The summary of projected water demand as arrived for the habitations in project taluks is given in **Table - 2**. As seen in said table, the total projected water demand for habitations in the project taluks for the project intermediate year of 2035 is 153.25 MLD and project ultimate year of 2050 is 181.25 MLD.

TABLE - 2

000087

SUMMARY OF PROJECTED WATER DEMAND FOR COMMON FACILITY

Sl. No.	Project Beneficiary	Projected Water Demand (MLD)	
		2035	2050
1.	872 Nos. of villages in Pavagada, Challakere & Molakalmuru taluks and Pavagada & Molakalmuru towns	105.25	123.25
2.	Ujjini and 216 villages in Kudlagi taluk of Bellary district (Phase 1 - 71 Villages, Phase 2 - 146 Villages)	34.50	42.25
3.	Chilakanahatti and 14 villages in Hospet taluk of Bellary district	4.00	4.75
4.	Thuruvanur & 58 number of habitations in Thuruvanur Hobli of Chitradurga Taluk	9.50	11.00
Total Demand =		153.25	181.25

4.0 SELECTION OF SURFACE SOURCE FOR THE PROJECT:

In order to identify a suitable and sustainable surface source of water to meet the water demand of the project taluks, a source study was done by evaluating the available surface sources in the region. In all four river basins were studied i.e. North Pennar (Uttara Pinakini), Cauvery, Krishna and West Flowing Rivers through Yettinahole Project. On identifying different major and minor storage reservoirs and canal systems in above four river basin systems, three alternative sources selected for further techno-economic evaluation as given below;

Proposed Madhugiri Feeder Canal from proposed Yettinahole Project

Tungabhadra Reservoir with drawal from existing Power Canal

Tungabhadra Reservoir with drawal from Backwaters of Reservoir

On detailed evaluation of the above sources it was concluded that, water drawl from Tungabhadra Reservoir backwaters is more feasible. Hence, for the present project, Tungabhadra Reservoir backwaters has been considered as the suitable and sustainable source of surface water. Tungabhadra Reservoir has an as built live storage capacity of 132.5 TMC and there is an as built dead storage volume of about 2.30 TMC below reservoir MDDL level and water need to be drawn from this buffer storage for the project to assure uninterrupted water supply to the habitations throughout the year. The design capacity for common facilities for the four schemes as given in above table is 181.25 MLD. Based on field study, the intake point may be considered near Tungabhadra reservoir backwaters with intake level below the MDDL level as specified elsewhere in the document. However the location of drawl shall be finalized after a detailed study. The tentative location of intake point for present scheme is shown in **Figure - 2**.

Rural Drinking Water & Sanitation Circle,
Bangalore.

FIGURE - 2

TENTATIVE LOCATION DETAILS OF RAW WATER INTAKE POINT AT TUNGABHARA RESERVOIR BACKWATERS

Note: The location and details as given above are for Bidders guidance only.

5.0 PROJECT PROPOSAL:

Under the proposed project, it is being considered to draw required quantity of raw water from Tungabhadra Reservoir backwaters and supply to project habitations after treatment. The project components include intake well, connecting pipes, jack well cum pump house, Approach Bridge, intake structure, raw water rising main, WTP, treated water storage tank, treated water pumping station, main booster pumping station (MBPS), master storage reservoirs (MSR) / BPT, intermediate pumping stations (IPSS), local lifting stations (LS), clear water bulk transmission mains, master balancing reservoirs (MBRs), gravity feeder mains up to habitations in project area etc.

The two schemes i.e. Ujjini and 216 villages in Kudlagi taluk of Bellary district (Phase 1 : 71 habitations and Phase 2 : 146 habitations) and Chilakanahatti and 14 villages in Hospet taluk of Bellary district 59 habitations of Turvanur Hobli in Chitradurga district are sub schemes of main scheme i.e Pavagada WSS.

The project habitations are to be grouped into clusters with each cluster having 15 - 18 villages. All the project components shall be designed for ultimate stage water demand of 181.25 MLD. The intake structure shall be located at backwaters of reservoir. Main booster pumping station (MBPS) and Intermediate booster pumping stations shall be provided to avoid very high head pumping. As per the preliminary design prepared by RDW&SD, the WTP is located near Haravanahalli village, Main Intermediate Pumping Station (MPS) is located near Shivapur village and Main Storage Reservoir (MSR)/BPT is located near Kakkuppi village. The water tapping point for Chilakanahatti and 14 villages sub scheme is WTP wherein water will be drawn from treated water storage reservoir of WTP.

The treated water from WTP shall be conveyed to MPS near Shivapur village through a bulk water transmission main. The water tapping point for Ujjini and 216 villages sub scheme is MPS wherein water will be drawn from storage tank of MPS. The water from MPS shall be conveyed to MSR near Kakkuppi village. At the MSR, a boosting station shall be provided to enhance the pressure to higher head so that, treated water from this point flows by gravity to most of the MBRs / ZBTs downstream. The water tapping point for Ujjini and 216 villages sub scheme is from pressurized main of boosting station.

The bulk water spine line from MSR / BPT which runs through Molakalmuru, Challakere and Pavagada taluks will be tapped at different locations in between to feed the MBRs / ZBTs directly through available head in the spine line. The design pressures at these junctions shall be as specified elsewhere in this document and the same shall be ensured by boosting at MSR.

The treated water from MSR which is further pressurized will be conveyed to Master Balancing Reservoirs (MBRs) located at each cluster of project villages. The treated water stored at MBRs shall be conveyed to existing and proposed OHTs in each habitation through a gravity feeder main network duly disinfecting with 0.50 mg/l of residual chlorine availability at village OHT feeding point. Whichever village is not having any OHT or adequate capacity meeting 50% capacity of intermediate year a separate OHT of 50% of intermediate year daily demand duly deducting the existing capacity or 10000 litres capacity whichever is higher with 7.50 m staging at the highest level in that village shall be constructed as part of this scheme. The design of the entire scheme shall be as per the design criteria given elsewhere.

The existing surface water supply infrastructure which is available and expected to be used/integrated with this water supply scheme shall be informed.

The water supply network shall be optimized in terms of use of gravity to minimize operational cost.

6.0 OPERATION PHILOSOPHY FOR MANAGEMENT OF BULK WATER SUPPLY:

As the proposed surface water scheme is a mega project involving many project components including intake, MBPS, IPS, MSRs, LS, MBRs, pipelines etc. which are interlinked with each other, manual operation of the scheme is difficult and requires huge manpower. In case of manual operation there are chances of human error and system cannot be synchronized completely to prevent overflows, water losses, and inequitable supply among habitations. Hence a comprehensive proven "Integrated Water Management System" shall be provided for the scheme for automated operation. The system provided shall include Integrated District Management System (IDMS), Water Management Districts (WMDs), Air Management System (AMS) and Reservoir Management System (RMS) with SCADA system for effective operation and easy in maintenance of the scheme.

The tentative layout plan of proposed water supply scheme is shown in **Figure - 3**.

FLOW DIAGRAM - 1**7.0 SECURING OF LAND:**

The project structures i.e. intake structure cum pumping station, WTP, clear water storage tank, master storage reservoir (MSR), intermediate pumping stations, lifting stations, MBRs

ZBTs etc. may be located on available government land and if bidder proposes alternative, suitable land has to be secured by Contractor only at his own cost. The lands secured by the Contractor from private sources shall be registered in the name of the respective gram panchayats only before starting the work. The Contractor shall secure in-principle agreement from land owners to sell the land. The value of lands shall not be higher than latest Guidance Value (fixed by GOK) plus 50%. it is the responsibility of Contractor to obtain available govt land, right of way / right of use permission from land owners and other Govt. agencies.

The tentative locations identified by RDW&SD, subject to final feasibility / acceptance by bidder with the flexibility to choose alternative sites with minimum land acquisition and cost economics keeping future O&M perspective is given below.

Sl. No.	Component	Tentative Place
1	Headworks	In the backwaters of Tungabhadra Reservoir near Hospet at a suitable location to draw water from below MDDL of Tungabhadra Reservoir (adjacent to NH-13 near existing tunnel).
2	Raw water rising main	All along the road up to WTP site in Hospet Taluk in Bellary District

Sl. No.	Component	Tentative Place
3	WTP	Near Haravanahalli village.
4	Pure water rising main from WTP to MBRs	All along the main roads
5	Master storage reservoir (MSR) with Boosting Station	Near Kakkuppi village adjacent to SH-2 for further feeding to MBRs serving cluster of villages by gravity and local boosting as necessary.
6	Pure water gravity main from MSR up to MBR's and LS's	All along the road and MBR's at higher altitudes comprising 15 - 18 habitations depend on elevation to deliver water by gravity to habitations
7	Intermediate Sumps and Pumping Stations (IPS's)	At strategic locations as per hydraulic requirement
8	Master Balancing Reservoirs (MBRs)	At strategically elevated locations to deliver water by gravity to habitations
9	Pure water gravity main from MBR's to habitations OHT's	All along the road from respective MBR's to habitation OHT's

8.0 TECHNICAL COMMITTEE

The Review and Evaluation Committee (Technical Expert Committee) to review and evaluate the technical proposal / PSR / Evaluation shall be formed with Chief Engineer RDW&S Dept. and other expert members of credibility and independent standing - including experts from Premier Institutions / Organizations. The recommendations of this committee with regard to the technical bid shall be final and binding.

The bidder shall submit the model calculations for Rising main, Transmission main & Distribution line depicting the Pressure Loss incurred and Pipes thickness required for the specific conditions along with the technical bid.

9.0 SITE VISIT BY BIDDERS

It is essential to visit all the probable / feasible site locations by bidder and to produce documentary evidence having visited all the proposed locations.

10.0 PROPOSED SERVICE LEVEL

The present service level and the source has been mentioned in the population list and as per Karnataka Government's Cabinet decision, it is proposed to provide 85 lpcd water for habitations and 135 lpcd for towns.

The list of habitations with population and water demand is given in enclosed Annexure - 1.
