NOTES
Heights are in metres and above Indian mean sea level. Contours are approximate. A relative height, it represents the approximate height, in metres, between the top and bottom of a steep slope. Tanks shown on this map usually contain water from July to December. Wells are numerous throughout the sheet, only the important ones have been shown. The triangulated heights and contours in this sheet have not been adjusted to the heights of the earth levelled to sea-level and may not be strictly in accordance with them. The common boundaries of the Protected Forests have not been shown for want of reliable information. The Bagodar River and Barakar River are generally fordable from November to June.
