NOTES

Heights are in metres and above Indian mean sea level.
Contours are approximate.
A relative height, 50, represents the approximate height, in metres, between the top and bottom of a steep slope.
Jhum or temporary cultivated areas occur throughout the jungle: they are normally abandoned after 2-3 years and are not shown.
All unmetalled roads are generally motorable in dry season.
The triangulated heights and contours in this sheet have not been adjusted to the spirit-levelled bench-marks and may not be strictly in accordance with them.
The exterior boundaries of areas of Reserved or Protected Forests are shown by green ribands. Hand Pump is shown thus.
