

Importance of the project

Name of work :- WIDENING OF DIWALIKHAL- BHARARISEN MOTOR ROAD IN TWO LANE

The above mentioned road is proposed in district Chamoli block Gairsain of Uttrakhand state. This road starts from Km 199.00 of NH 109 old 87 E.

Proposed road providing connectivity to Diwalikhali, Bharadisain Parwadi Sarkot & incidentally other surrounding villages also get the benefit of this road having approximate population is 3000. Presently those villages walk 3 to 5 Km to get their daily needs from nearby market Gairsain. The area is deprived & backward in all respect lacking the existence of the road. There main occupation is agriculture & hand craft. The Road is the Principal demand & requirement for them since long. In fact there is a genuine need of the road for following reasons.

Economical aspect:- They grow fruits & vegetables & seasonal pulses herbs milk, produce various hand crafts. The market price off the organically fertilized yield is so high. Since there is no means of transportation all these hand earned yield get perished as they don't get due advantage of their hard work.

Other Developmental aspects :- In the lack of the road the government planning for the welfare of the people are not accessible adequately. If the road will be there the access of every department like block development, district administration, electricity, water supply, health will be easier and frequent. Thus the villagers will be benefited to full extant.

Health and education:- In the lack of road many ailed people has not access for the medical facilities. It is very common scenario over here many women get in serious danger, even some of them expired during maternity. Same is the case and seriously injured or ailed people.

Similar is the case of education many children have not access to nearby town school being far away. Many don't prefer to sent there girl child that much far away for their own social reasons. If the road will be there they can not only access the town but the construction of school and hospital can be planned at lesser cost since due to absence of transport the construction cost is very much high in this area(In that way very much Govt. money can be saved.)

Forest development activities:- Forest development facilities will also be increased, as the plants can be grown and transported to suitable area in lesser cost. The watch and wards of forest activity will be improved. The easy access of the forest officer to the people will be useful for the forest and the people both way people will come to understand the importance of the forest for them and human beings. The road has been planned in such way that minimum trees& other forest wealth will destroyed. It shall also be taken in consideration during construction that if some trees which are not getting disturbance to the traffic, shall be kept intact even they are within the Road width.

Tourist activity:- Tourist activity shell be increased & by the way the govt. will get more revenue & people will get employment by selling their fruits and hand crafts & other ways.

Since ours is a vast country, many languages & cultures are the blessing of god for our country. We feel very proud & special feeling when we travel in other and of our country.

So the bottom line is that, the road construction will open the flood gate of all kind development like economic , social , health, education, forestation, cultural activities.

Total Length of the Road = 4.00 KM

Details of the Land required for the project

Reserved Forest		
Van panchayat land	4000 x 3.00	1.20 Hec
Civil Land	-	-
Nap Land	-	-
muck disposal Land	50.00 x 15.00	0.075 Hec
Total Land		1.275 Hec

In the light of above facts & in public interest above mentioned forest area kindly de transferd for road construction please.
