

**NAME OF PROJECT – Construction of 132KV DCSS Line from 220/132 KV S/S
Vishrampur to Parsa**

The proposal for Construction of 132KV DCSS Line from 220/132 KV S/S Vishrampur to Parsa is approved by honorable Electricity regulatory committee (C.G. Govt.) in respect of providing uninterrupted & better quality Electricity supply to the end user. This Project will also fulfill Electrical Connectivity to the Upcoming Industrial Power requirements.

At Present Scenario Power to Nearby Areas is met by 33/11KV Supply, which is full of interruptions and line losses are much more.

This project will help to overcome all the drawbacks of existing power system, since the proposed land is best located for the incoming and outgoing of the Vishrampur-Parsa transmission line with proper road connectivity and for construction of line the forest land in the route of transmission line cannot be avoided. During survey the route of transmission line has optimized by considering minimum involvement of forest land and minimum tree falling.
