Srirampur Area

Justification for diversion of 162.45 Ha. Forest Land in Indaram RF, Mancherial Range & Forest Division in Mancherial District in favour of S.C.Co.Ltd., for SRP OC-II Expansion Project.

1.Quarry Area (139.45 Ha): Coal Mining is site specific. This is Coal bearing area required for Quarry.

2. Safe Barriers (23.00 Ha): A drain and earthen bund is provisioned all along the quarry (broken) area to protect the quarry of the mine from inundation. Road is provisioned to be maintained all along the quarry for regular inspection for the compliance of the statue conditions. Power transmission line are to be laid for power supply to the electrical equipment deployed in quarry operations including illumination of the working places. Around 7.5m safety zone which will also serve as green belt between the proposed diversion of forest land and the adjacent Forest land has to be left for the compliance of the forest land diversion. So, 23 Ha of bare minimum forest land diversion is required on the name of safe barriers.

3.Over Burden dumping area (Nil): No forest land diversion is required for accommodation of OB generated in the project. The OB generated in the ^{present} quarry is proposed to accommodate by raising the dump height up to 90 Mtrs. above ground level in the existing external and internal dumps of SRP OC-II Project and also in the voids of SRP OC-II Expansion Project to optimize the land requirement. Forest land is exclusively used for Quarrying to extract the Coal.
