

JUSTIFICATION FOR PROVIDING BSNL MOBILE COVERAGE IN BETWEEN ATTATHODU AND CHALAKKAYAM

At present there is no mobile coverage in a distance of 13 KMs in the main route of Sabarimala in between Chalakkayam and Attathodu. During last Sabarimala Pilgrim season, there were many accidents occurred in this area. Because of lack of mobile coverage, there was a considerable delay for the rescue of the affected people.

In the Sabarimala review meeting, District Collector of Pathanamthitta has requested BSNL to provide coverage in that area. BSNL has conducted survey and found that truck mounted BTS (COW) can be positioned at two locations in between Attathodu and Chalakkayam. It is not possible to connect these BTSs using Micro Wave system. So Optical fiber cable is to be connected to the COW BTSs.

Optical Fiber cable of BSNL is already passing through the Road to Pamba. For connecting the COW BTS, cable is to be laid from the locations to the nearest joint of OFC route along the Main Road. First location requires trenching of 200 mrs along the road and second location requires trenching of 600 mrs along the road.

It is requested that approval may please be given for laying optical fiber cable for a length of 200 mrs in the first location and 600 mrs in the second location. Truck mounted BTS will be shifted from the road after the pilgrimage season.
