

Justification for locating the project in forest Area.

Bhimgaja Augmantation project is site specific projects. The recommended Water supply is located in the part of the reserved forest. Water pipeline for this particular village is not available in any revenue lands. This pipeline deposits are only located in the hill ranges, which form part of the reserved forest. Thus there is no alternative left that to opt for the forestland. Since forest areas are involved it is mandatory to take the permission for approach road. This proposal is being forwarded for obtaining clearance under F.C. Act 1980
