

JUSTIFICATION FOR LOCATING THE PROJECT IN FOREST AREA

No alternative route is available and this project will serve the entire Samanda C.D Block and beyond in voltage improvement and stable power supply under Rural Electricity Distribution Backbone and only minimal portion of forest area along the PWD Road is involved compared to its benefits. This has to be done as per guidelines issued by the Central Electricity Authority to provide Rural Electricity Distribution Backbone (REDB) to construct 33/11 KV Sub Station at every C.D. Block for which 33KV Line is required to be drawn.
